It is designed to validate the skills and knowledge required to manage and optimize security policies and configurations on Check Point devices. With this certification, professionals can demonstrate their expertise in Check Point security solutions and advance their careers in the security industry.

CheckPoint Check Point Certified Security Expert R81 Sample Questions (Q575-Q580):

NEW QUESTION # 575

You have used the "set inactivity-timeout 120" command to prevent the session to be disconnected after 10 minutes of inactivity. However, the Web session is being disconnected after 10 minutes. Why?

- **A. The idle timeout for the web session is specified with the "set web session-timeout" command.**
- B. Probably, you have forgotten to make sure that nobody is accessing the management server via the SmartConsole which locks the management database.
- C. The number of minutes is correct. Probably, you have forgotten to save this setting with the "save config" command.
- D. The number specified is the amount of the idle timeout in seconds rather than in minutes. So you have to use the command "set inactivity-timeout 600" instead.

Answer: A

Explanation:

The reason why the web session is being disconnected after 10 minutes is that the idle timeout for the web session is specified with the "set web session-timeout" command, not the "set inactivity-timeout" command.

The "set inactivity-timeout" command only affects the CLI session, not the web session. To prevent the web session from being disconnected after 10 minutes of inactivity, you need to use the "set web session-timeout" command with a higher value than 10 minutes. NEW QUESTION # 576

How can you see historical data with cpview?

- A. cpview -f <timestamp>
- B. cpview -d <timestamp>
- C. cpview -e <timestamp>
- **D. cpview -t <timestamp>**

Answer: D

Explanation:

To see historical data with cpview, you can use the cpview -t <timestamp> command, where <timestamp> is the date and time you want to view. For example, cpview -t Jan 01 2023 12:00:00 will show you the cpview data for January 1st, 2023 at noon. You can also enter a partial date, such as Jan 02, to see the data for the whole day. This feature is available in R77.10 and higher versions of Check Point software1. You can also access the historical data by pressing the "t" key while running cpview in live mode and entering the desired date and time1. The historical data is stored in the CPViewDB.dat file in the /var/log/CPView_history directory on your gateway2. You can export this file and import it into other tools for visualization, such as Grafana3.

NEW QUESTION # 577

Which one of the following is NOT a configurable Compliance Regulation?

- A. GLBA
- B. CJIS
- C. NCIPA
- **D. SOCI**

Answer: D

Explanation:

The Check Point Compliance Blade is a security management tool that monitors the compliance status of the Security Gateways and Security Management Servers with various regulatory standards¹. The Compliance Blade supports the following regulatory standards²:

* GLBA: The Gramm-Leach-Bliley Act, also known as the Financial Services Modernization Act of

1999, is a US federal law that requires financial institutions to protect the privacy and security of their customers' personal information.

* CJIS: The Criminal Justice Information Services Division, also known as CJIS, is a division of the US Federal Bureau of Investigation that provides criminal justice information services to law enforcement, national security, and intelligence agencies. CJIS has a set of security policies and requirements that govern the access, use, and protection of the CJIS data.

* NCIPA: The National Counterintelligence and Security Center Insider Threat Program Maturity Framework, also known as NCIPA, is a US government framework that provides guidance and best practices for establishing and enhancing insider threat programs within federal agencies. NCIPA defines five levels of maturity for insider threat programs, from initial to optimized.

* SOCI: This is not a valid option for a configurable Compliance Regulation. There is no such regulatory standard with this acronym. However, there is a similar acronym, SOC 2, which stands for Service Organization Control 2, which is a set of standards and criteria for auditing the security, availability, processing integrity, confidentiality, and privacy of service providers that store, process, or transmit customer data³.

Therefore, the correct answer is C, as SOCI is not a configurable Compliance Regulation.

NEW QUESTION # 578

What are the minimum open server hardware requirements for a Security Management Server/Standalone in R81?

- **A. 4 CPU cores, 8GB of RAM and 500GB of disk space**
- B. 8 CPU cores, 16GB of RAM and 500 GB of disk space
- C. 8 CPU cores, 32GB of RAM and 1 TB of disk space
- D. 2 CPU cores, 4GB of RAM and 15GB of disk space

Answer: A

Explanation:

Explanation

The minimum open server hardware requirements for a Security Management Server/Standalone in R81 are:

CPU: Intel Core i5-4590 or equivalent (4 cores)

Memory: 8 GB RAM

Disk space: 500 GB

The other options do not match the minimum requirements. Option A has insufficient CPU cores, memory and disk space. Option B has excessive CPU cores and disk space. Option D has excessive CPU cores, memory and disk space.

NEW QUESTION # 579

What mechanism can ensure that the Security Gateway can communicate with the Management Server with ease in situations with overwhelmed network resources?

- A. The corresponding feature is called "Dynamic Dispatching"
- B. There is a feature for ensuring stable connectivity to the management server and is done via Priority Queuing.

- C. The corresponding feature is new to R81.10 and is called "Management Data Plane Separation"
- D. The corresponding feature is called "Dynamic Split"

Answer: D
