Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q82-Q87):

NEW QUESTION # 82

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are adding a new field to the SalesTable form.

You must use an extension to add a status field onto the form.

Answer Area

You need to create the extension in the Application Object Tree (AOT) and add the extension to the demoExtensions model.

Solution: Add a new form object to the project and name the form SalesTable.Extension.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Instead navigate to the user interface forms section for the SalesTable form and create an extension.

Note: In Dynamics 365 Finance and Operations, the new fields will need to be added via a table extension.

Create the extensions on the SalesTable.

NEW QUESTION # 83

You are a Dynamics 365 Finance developer for a company that sells pre-owned vehicles. When the company acquires a new vehicle, vehicle identification (VIN) numbers are added to the VIN field in the CustTable.

You need to create an event handler to validate that new VIN values are at least 10 characters long. Validation must occur when records are saved- Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Answer Area

Copy the validatedWrite event handler on the CustTable table object.

Copy the onModified event handler on the CustTable object

Add code to perform the validation.

1 - Copy the validatedWrite event handler on the CustTable table object.

- 2 - Copy the onModified event handler on the CustTable object
- 3 - Add code to perform the validation.

NEW QUESTION # 84

A company uses Dynamics 365 Finance. You have two tables as shown:

Table name	Comments
EmpITable	This table stores employee information.
EmpIBankAccount	This custom table is used to store bank account information for employees. EmpIBankAccount has a foreign key relation to EmpITable.

When an employee is deleted from EmpITable, the corresponding bank account information must automatically be deleted from EmpIBankAccount.

You need to ensure that the requirement is met

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Set the value of the OnDelete property to Cascade.
- B. Select the foreign key relation properties from EmpIBankAccount.
- C. Set the value of the OnDelete property to Restricted.
- D. Select the foreign key relation properties from EmpITable.

Answer: A,B

NEW QUESTION # 85

A company plans to migrate purchase orders from an older system into Dynamics 365 Finance.

You need to generate field mapping between the source and the target data structures.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Create this type of project in the data management workspace:

Microsoft

- Import
- Export
- View map

Open the project and select:

- Define an XML manifest
- Manage
- Download

Select this UI option:

- Generate mapping
- Generate integration
- Modify target mapping

Explanation:
 Graphical user interface, text, application, email Description automatically generated

Create this type of project in the data management workspace:

Microsoft

- Import
- Export
- View map

Open the project and select:

- Define an XML manifest
- Manage
- Download

Select this UI option:

- Generate mapping
- Generate integration
- Modify target mapping

NEW QUESTION # 86

You need to deploy the web portal integration solution.
 Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Add the package to source control and check in changes.	
Build and create a deployment package.	
Import the model into a Development environment.	
Synchronize the models in the Developer environment by using Get latest feature.	
Import the model into the Build environment.	
Import the model into a QA environment.	
Import the deployment package in another development environment.	

Answer:

Explanation:

Actions	Answer Area
Add the package to source control and check in changes.	Add the package to source control and check in changes.
Build and create a deployment package.	Import the model into a Development environment.
Import the model into a Development environment.	Synchronize the models in the Developer environment by using Get latest feature.
Synchronize the models in the Developer environment by using Get latest feature.	Build and create a deployment package.
Import the model into the Build environment.	
Import the model into a QA environment.	
Import the deployment package in another development environment.	

Explanation:

Scenario: You must install and configure a third-party solution for credit card processing within Dynamics 365 Finance. The third-party company will provide a deployable package.

You must develop a web portal that allows customers to browse products, place orders, and check order status. Product data for the web portal must be integrated as periodic batches.

You must configure the warehouse mobile device portal for warehouse operations.

You must install a third-party solution to support web portal integration. The solution is supplied as a source code model file.

Step 1: Add the package to source control and check in the changes.

Deployable packages from third parties can be manually installed on a development VM, and the installed artifacts can then be added to source control.

Step 2: Import the model into a Development environment.

Install a model in a development environment

Step 3: Synchronize the models in the Developer environment by using Get latest feature Because the models and runtime packages are in source control, other developers who use other development environments can just synchronize the models and packages to their workspace by using the Get latest feature of source control.

Step 4: Build and create a deployment package

The build process will include this runtime package in the final deployable package. This allows customers to take the deployable package from the build and have one package to deploy to their environments. The one package includes both custom solutions and all the third party solutions.
