Our company is a professional certificate exam materials provider, we have occupied in this field for years, and we are famous for offering high quality and high accurate Analytics-Con-301 study materials. Moreover, we have a professional team to research the latest information of the exam, we can ensure you that Analytics-Con-301 exam torrent you receive is the latest we have. In order to strengthen your confidence for Analytics-Con-301 Exam Materials, we also pass guarantee and money back guarantee, and if you fail to pass the exam, we will refund your money. We have professional service stuff, and if you have any questions, you can consult them.

The prominent benefits of Salesforce Analytics-Con-301 certification exam are more career opportunities, updated skills and knowledge, recognition of expertise, and instant rise in salary and promotion in new job roles. To do this you just need to pass the Salesforce Analytics-Con-301 Exam. However, to get success in the Analytics-Con-301 exam is not an easy task, it is a challenging Analytics-Con-301 exam.

>> Vce Analytics-Con-301 Format <<

Pass Analytics-Con-301 Exam with Perfect Vce Analytics-Con-301 Format by DumpsMaterials

The DumpsMaterials team is updating the Salesforce Analytics-Con-301 study material according to the changes in the syllabus on daily basis. The users will receive Analytics-Con-301 updates for 365 days so they can prepare according to the updated content. The 24/7 support system has been made for customers to solve their problems and serve them in the best possible ways in order to pass the Salesforce Certified Tableau Consultant (Analytics-Con-301) certification exam on the first try!

Salesforce Analytics-Con-301 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Management: This part focuses on establishing governance and support for published content. Tableau Consultants are expected to manage data security, publish and maintain data sources and workbooks, and oversee content access. It includes applying governance best practices, using metadata APIs, and supporting administration functions to maintain data integrity and accessibility.

Topic 2	<ul style="list-style-type: none"> • Business Analysis: This section of the exam measures skills of Tableau Consultants focusing on evaluating the current state of analytics within an organization. It covers mapping business needs to Tableau capabilities, translating analytical requirements to best practices in Tableau, and recommending appropriate deployment options like Tableau Server or Tableau Cloud. It also includes evaluating existing data structures for supporting business needs and identifying performance risks and opportunities.
Topic 3	<ul style="list-style-type: none"> • Business Consulting: For Tableau Consultants, this section involves designing and troubleshooting calculations and workbooks to meet advanced analytical use cases. It covers selecting appropriate chart types, applying Tableau's order of operations in calculations, building interactivity into dashboards, and optimizing workbook performance by resolving resource-intensive queries and other design-related issues.

Salesforce Certified Tableau Consultant Sample Questions (Q11-Q16):

NEW QUESTION # 11

A client uses Tableau Data Management and notices that when they view a data source, they sometimes see a different count of workbooks in the Connected Workbooks tab compared to the lineage count in Tableau Catalog. What is the cause of this discrepancy?

- A. Some Creators have connected to the data source in Tableau Desktop but have not yet published a workbook.
- B. Some workbooks have been connected to the data source, but do not use any fields from it.
- C. Some workbooks have not been viewed by enough users yet.
- **D. Some of the workbooks connected to the data source are not visible to the user due to permissions.**

Answer: D

Explanation:

The discrepancy between the count of workbooks in the Connected Workbooks tab and the lineage count in Tableau Catalog can occur because of user permissions. In Tableau Data Management, the visibility of connected workbooks is subject to the permissions set by administrators. If a user does not have permission to view certain workbooks, they will not see them listed in the Connected Workbooks tab, even though these workbooks are part of the data source's lineage and are counted in Tableau Catalog. References: This explanation is based on the functionality of Tableau Data Management and Tableau Catalog, which includes managing user permissions and access to workbooks. The information is supported by Tableau's official documentation on data management and security practices¹.

NEW QUESTION # 12

A Tableau consultant is tasked with choosing a method of setting up row-level security (RLS) entitlements with tables during a Tableau implementation. The consultant has received a set of roles from a client in one normalized table, and a set of entitlements from the client in another normalized table.

The consultant plans on using the deepest granularity method. However, when the consultant gains access to the final set of data, they discover duplicate values at the lowest level. Most of the regions in the client's dataset contain sub-regions named 'East' and 'West'. However, some regions have a 'Null' value for sub-region.

Role_ID	Region	Sub-Region
All	Null	Null
AMER	AMER	Null
AMER WEST	AMER	WEST
AMER EAST	AMER	EAST
AMER SOUTH	AMER	SOUTH
EMEA	EMEA	Null
EMEA WEST	EMEA	WEST
EMEA EAST	EMEA	EAST
EMEA NORTH	EMEA	NORTH
EMEA SOUTH	EMEA	SOUTH

How should the consultant proceed?

- A. Use the deepest granularity method because it is the most performant and the duplicate values will be handled by the mapping table.
- B. Use sparse entitlements because it is the most performant and the duplicate values will be handled by the mapping table.
- C. Use sparse entitlements because it defines entitlements at every level of the hierarchy and can handle duplicate values in the dataset.
- D. Use the deepest granularity method because it defines entitlements at every level of the hierarchy and can handle duplicate values in the dataset.

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Tableau's RLS entitlement design patterns include:

1. Deepest Granularity Method

- * Requires one unique role # one unique lowest-level value pairing.
- * Fails when the dataset contains duplicate lowest-level values (e.g., multiple "East" sub-regions across different regions).
- * Cannot operate correctly when some lowest-level values are NULL.

Thus, the deepest granularity method is not valid here.

2. Sparse Entitlements Method

Tableau documentation states:

- * Sparse entitlements define RLS at each level of the hierarchy instead of only at the lowest level.
- * This method supports duplicate lowest-level values.
- * Handles scenarios where some levels are NULL because higher-level entitlements (e.g. Region = AMER) can still correctly apply.
- * More flexible for hierarchical geographic structures (Region # Sub-Region # Country, etc.).

Given the client's dataset:

- * Multiple "East" and "West" sub-regions
- * Some "Null" sub-regions
- * Hierarchical levels present

Sparse entitlements is the only correct and supported choice.

Why the incorrect options are wrong:

A & B - Deepest Granularity

- * Deepest granularity fails when the lowest-level values are not unique.
- * It cannot handle NULL values at the lowest tier.
- * Performance is not superior in this scenario.

D - Sparse because it is most performant

Performance is not the defining advantage.

Flexibility and ability to handle duplicate lowest-level values is.

Thus, C is the correct statement.

- * RLS entitlement design patterns: deepest vs. sparse entitlements.
- * Rules requiring unique lowest-level identifiers for deepest granularity.
- * Guidance stating sparse entitlements should be used when duplicates or NULL values exist in hierarchical structures.

NEW QUESTION # 13

A data analyst sets up a calculation to filter a dashboard so that it displays only the users' information. The dashboard will then be published to Tableau Cloud.

The data analyst plans to use the following calculation to filter the data: USERNAME() = [Correct Answer] Which column in the table below should the data analyst reference in the calculation?

Full Name	Abbreviated Name	Lower Case Name	Email
Sean Miller	SMiller	sean miller	Sean.Miller@superstore.com
Tamara Chand	TChand	tamara chand	Tamara.Chand@superstore.com
Raymond Buch	RBunch	raymond buch	Raymond.Buch@superstore.com
Tom Ashbrook	Tashbrook	tom ashbrook	Tom.Ashbrook@superstore.com

- A. Email
- B. Abbreviated Name
- C. Lower case Name

Answer: A

Explanation:

When dashboards are published to Tableau Cloud, the function USERNAME() returns the user's Tableau Cloud username, which is the email address associated with their Tableau Cloud account.

Tableau documentation states:

- * On Tableau Cloud, the value returned by USERNAME() is always the user's email address.
- * Row-Level Security (RLS) is typically implemented using a comparison of USERNAME() to an email field in the data source.
- * For secure filtering, the field compared to USERNAME() must match the authentication identity exactly.

Looking at the provided table:

- * "Abbreviated Name" contains short custom codes like "SMiller," which do not match Tableau Cloud usernames.
- * "Lower Case Name" contains names like "sean miller," which also do not match Tableau Cloud usernames.
- * "Email" contains the full email address for each user, such as "Sean.Miller@superstore.com," which is the only field that corresponds to what USERNAME() returns in Tableau Cloud.

Therefore, the correct field to reference is Email.

- * Tableau Cloud authentication documentation stating USERNAME() returns the user's email address.
- * Row-Level Security setup guidance recommending the comparison USERNAME() = [Email Field].
- * Tableau security practices indicating only the email column will match USERNAME() values on Tableau Cloud.

NEW QUESTION # 14

A client is considering migrating from Tableau Server to Tableau Cloud.

Which two elements are determining factors of whether the client should use Tableau Server or Tableau Cloud? Choose two.

- A. Whether or not there are large numbers of concurrent extract refreshes
- B. Whether or not the client plans to leverage single sign-on (SSO)
- C. Amount of data storage used on the client's existing server
- D. Whether or not the client needs the ability to connect to public, cloud-based data sources

Answer: A,B

Explanation:

When considering a migration from Tableau Server to Tableau Cloud, two critical factors to consider are the client's need for single sign-on (SSO) and the volume of concurrent extract refreshes.

Single Sign-On (SSO): Tableau Cloud supports SSO, which can streamline user authentication and enhance security. If the client plans to leverage SSO, Tableau Cloud may be a suitable choice¹.

Concurrent Extract Refreshes: The number of concurrent extract refreshes is a significant factor because it impacts performance and resource allocation. Tableau Server might be more appropriate if the client has a high volume of concurrent extract refreshes, as it allows for more control over the infrastructure to manage these workloads².

References: The decision between Tableau Server and Tableau Cloud should be based on specific organizational needs, including security, compliance, performance, and scalability. The official Tableau resources provide guidance on these factors^{1,2}. Additionally, discussions in the Tableau Community highlight the importance of considering these elements when choosing between Tableau Server and Tableau Cloud¹.

NEW QUESTION # 15

For a new report, a consultant needs to build a data model with three different tables, including two that contain hierarchies of locations and products. The third table contains detailed warehousing data from all locations across six countries. The consultant uses Tableau Cloud and the size of the third table excludes using an extract.

What is the most performant approach to model the data for a live connection?

- A. Relating the tables in Tableau Desktop
- B. Joining the tables in Tableau Desktop
- C. Blending the first two tables with the third
- D. Joining the tables in Tableau Prep

Answer: A

Explanation:

For a performant live connection in Tableau Cloud, especially when dealing with large datasets that preclude the use of extracts, relating the tables in Tableau Desktop is the recommended approach. This method allows for flexibility in how the data is queried and can improve performance by leveraging Tableau's relationships feature, which optimizes queries for the underlying database.

References: The best practices for live connections in Tableau Cloud suggest using relationships to manage complex data models efficiently¹. Additionally, Tableau's documentation on connecting data sources recommends using relationships for better

performance with live connections2.

NEW QUESTION # 16

.....

You deserve this opportunity to win and try to make some difference in your life if you want to attend the Analytics-Con-301 exam and get the certification by the help of our Analytics-Con-301 practice braindumps. As we all know, all companies will pay more attention on the staffs who have more certifications which is a symbol of better understanding and efficiency on the job. Our Analytics-Con-301 Study Materials have the high pass rate as 98% to 100%, hope you can use it fully and pass the exam smoothly.
