## GitHub-Advanced-Security Latest Exam Materials, GitHub-Advanced-Security New Dumps Files

We own three versions of the GitHub-Advanced-Security exam torrent for you to choose. They conclude PDF version, PC version and APP online version. You can choose the most convenient version of the GitHub-Advanced-Security quiz torrent. The three versions of the GitHub-Advanced-Security test prep boost different strengths and you can find the most appropriate choice. For example, the PDF version is convenient for download and printing and is easy and convenient for review and learning. It can be printed into papers and is convenient to make notes. You can learn the GitHub-Advanced-Security Test Prep at any time or place and repeatedly practice.

## GitHub Advanced Security GHAS Exam Sample Questions (Q13-Q18):

### NEW QUESTION # 13

A dependency has a known vulnerability. What does the warning message include?

- A. An easily understandable visualization of dependency change
- B. How many projects use these components
- C. The security impact of these changes
- **D. A brief description of the vulnerability**

**Answer: D**

Explanation:

When a vulnerability is detected, GitHub shows a warning that includes a brief description of the vulnerability. This typically covers the name of the CVE (if available), a short summary of the issue, severity level, and potential impact. The message also links to additional advisory data from the GitHub Advisory Database.

This helps developers understand the context and urgency of the vulnerability before applying the fix.

### NEW QUESTION # 14

Assuming security and analysis features are not configured at the repository, organization, or enterprise level, secret scanning is enabled on:

- **A. Public repositories**
- B. All new repositories within your organization
- C. Private repositories
- D. User-owned private repositories

**Answer: A**

Explanation:

By default, secret scanning is enabled automatically for all public repositories. For private or internal repositories, secret scanning must be enabled manually unless configured at the organization or enterprise level.

This default behavior helps protect open-source projects without requiring additional configuration.

### NEW QUESTION # 15

Secret scanning will scan:

- A. Any Git repository.
- B. A continuous integration system.
- **C. The GitHub repository.**
- D. External services.

**Answer: C**

Explanation:

Secret scanning is a feature provided by GitHub that scans the contents of your GitHub repositories for known types of secrets, such as API keys and tokens. It operates within the GitHub environment and does not scan external systems, services, or repositories outside of GitHub. Its primary function is to prevent the accidental exposure of sensitive information within your GitHub-hosted code.

### NEW QUESTION # 16

Which of the following benefits do code scanning, secret scanning, and dependency review provide?

- A. Automatically raise pull requests, which reduces your exposure to older versions of dependencies
- B. View alerts about dependencies that are known to contain security vulnerabilities
- C. Confidentially report security vulnerabilities and privately discuss and fix security vulnerabilities in your repository's code
- **D. Search for potential security vulnerabilities, detect secrets, and show the full impact of changes to dependencies**

**Answer: D**

Explanation:

These three features provide a complete layer of defense:

- \* Code scanning identifies security flaws in your source code
  - \* Secret scanning detects exposed credentials
  - \* Dependency review shows the impact of package changes during a pull request
- Together, they give developers actionable insight into risk and coverage throughout the SDLC.

#### NEW QUESTION # 17

Which of the following features helps to prioritize secret scanning alerts that present an immediate risk?

- **A. Secret validation**
- B. Custom pattern dry runs
- C. Non-provider patterns
- D. Push protection

**Answer: A**

Explanation:

Secret validation checks whether a secret found in your repository is still valid and active with the issuing provider (e.g., AWS, GitHub, Stripe). If a secret is confirmed to be active, the alert is marked as verified, which means it's considered a high-priority issue because it presents an immediate security risk.

This helps teams respond faster to valid, exploitable secrets rather than wasting time on expired or fake tokens.

#### NEW QUESTION # 18

.....

Our Desktop version is an application software that runs without an internet connection. It helps you to test yourself by giving the GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) practice test. Our desktop version also keeps a record of your previous performance and it shows the improvement in your next GitHub-Advanced-Security Practice Exam. With the help of PrepAwayETE GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam questions, you will be able to pass the GitHub GitHub-Advanced-Security certification exam with ease. When you invest in our product it will surely benefit your GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam dumps.
