CompTIA A+ Certification Exam: Core 2 Sample Questions (Q650-Q655):

NEW QUESTION # 650

A user's smartphone data usage is well above average. The user suspects an installed application is transmitting data in the background. The user would like to be alerted when an application attempts to communicate with the internet. Which of the following BEST addresses the user's concern?

- A. Remote wipe
- B. Firewall
- C. Operating system updates
- **D. Antivirus**

Answer: D

NEW QUESTION # 651

When a user is browsing a website on a smartphone, a pop-up appears. The pop-up states that the system has been breached and directs the user to an application to resolve the breach. Which of the following should the user do?

- A. Download and install the application to resolve the issue
- **B. Close the website and ignore the pop-up**
- C. Analyze the smartphone to find the source of the breach
- D. Replace the smartphone

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation: This is a scareware scam that attempts to trick users into installing malicious applications. The best action is to close the website and ignore the pop-up.

* B. Replace the smartphone - Incorrect. The phone is likely not compromised; it is just displaying a fake warning.

* C. Download and install the application to resolve the issue - Incorrect. Doing so could infect the device with malware.

* D. Analyze the smartphone to find the source of the breach - Unnecessary, as there is no real breach.

NEW QUESTION # 652

A large university wants to equip all classrooms with high-definition IP videoconferencing equipment. Which of the following would most likely be impacted in this situation?

- A. PAN
- B. SAN
- **C. LAN**
- D. GPU

Answer: C

Explanation:

LAN is the most likely option to be impacted in this situation. LAN stands for Local Area Network, and it is a network that

connects devices within a limited area, such as a building or a campus. Installing high-definition IP videoconferencing equipment in all classrooms would require a high bandwidth and reliable LAN infrastructure to support the video and audio transmission. The LAN would also need to be configured with proper security, quality of service, and multicast protocols to ensure the optimal performance of the videoconferencing system. SAN, GPU, and PAN are not directly related to this scenario. SAN stands for Storage Area Network, and it is a network that provides access to consolidated storage devices. GPU stands for Graphics Processing Unit, and it is a hardware component that handles graphics rendering and computation. PAN stands for Personal Area Network, and it is a network that connects devices within a short range, such as Bluetooth or infrared. References:

NEW QUESTION # 653

A technician is an administrator on a messaging application for a private work group of mixed departments.

One of the technician's colleagues discloses to the group that their employer recently suffered a major security breach and shared details about the breach to the group Which of the following should the technician do first?

- A. Remove the colleague from the group and ask members to delete the messages.
- **B. Contact the supervisor and report the colleague with screen shots of the messages**
- C. Message the colleague privately and ask the colleague to delete the messages immediately.
- D. Ignore the messages as all of the group members work for the same employer.

Answer: B

Explanation:

In the case of a security breach disclosure, it's crucial to follow proper protocol to handle sensitive information responsibly:

* Ignore the messages: Not appropriate as it disregards the potential impact and severity of the breach.

* Remove the colleague and ask members to delete the messages: While it might limit the spread of the information, it doesn't address the breach reporting requirement.

* Message the colleague privately: Might help in immediate removal of messages but does not follow the proper chain of command and reporting protocols.

* Contact the supervisor: The correct action, as it ensures that the incident is handled by higher authorities who can take appropriate measures. Reporting with screenshots ensures that there is evidence of the disclosure.

NEW QUESTION # 654

A user requires local administrative access to a workstation. Which of the following Control Panel utilities allows the technician to grant access to the user?

- A. System
- B. Network and Sharing Center
- **C. User Accounts**
- D. Security and Maintenance

Answer: C

Explanation:

Explanation

User Accounts is a Control Panel utility that allows the technician to manage user accounts and groups on a workstation. The technician can use User Accounts to grant local administrative access to a user by adding the user to the Administrators group. The Administrators group has full control over the workstation and can perform tasks such as installing software, changing system settings, and accessing all files.
