

Plat-Dev-210 Test Study Guide - Vce Plat-Dev-210 Torrent

Our Plat-Dev-210 learning materials help you to easily acquire the Plat-Dev-210 certification even if you have never touched the relative knowledge before. With our Plat-Dev-210 exam questions, you will easily get the favor of executives and successfully enter the gates of famous companies. You will have higher wages and a better development platform. What are you waiting for? Come and buy Plat-Dev-210 Study Guide now!

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
Topic 2	<ul style="list-style-type: none">• Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 3	<ul style="list-style-type: none">• Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

Topic 4	<ul style="list-style-type: none"> • Omniscripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.

Salesforce Plat-Dev-210 PDF Questions - Best Exam Preparation Strategy

All the given practice questions in the desktop software are identical to the Salesforce Certified Omnistudio Developer (Plat-Dev-210) actual test. Windows computers support the desktop practice test software. TestValid has a complete support team to fix issues of Salesforce Plat-Dev-210 PDF QUESTIONS software users. TestValid practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their Salesforce Certified Omnistudio Developer (Plat-Dev-210) preparation status and remove their mistakes.

Salesforce Certified Omnistudio Developer Sample Questions (Q36-Q41):

NEW QUESTION # 36

Refer to the exhibit below. In this integration production structure, what Send JSON Path would be used to send the Output of the Action1 element to a Remote Action?

- A. BlockB:BlockB. Action1
- **B. Action1: BlockB. Block A**
- C. Action1. BlockB. Block A
- D. BlockA: BlockB. Action 1

Answer: B

Explanation:

The correct syntax for the Send JSON Path is ActionName: BlockName, where ActionName is the name of the action element and BlockName is the name of the block element that contains the output data. The other options are either missing the colon or using incorrect names.

NEW QUESTION # 37

A developer creates an Integration Procedure with a Set Values and a DataRaptor Extract Action that requires AccountId as a key. When the developer previews the Integration Procedure, the developer enters the AccountId correctly and execute the Preview. The developer sees the data extract by the DataRaptor in the Debug Log, but the response is empty.

What is the likely cause of this issue?

- A. The DataRaptor Action did not have the add response Ro Response JSON property set to true.
- B. The AccountId used for the preview is invalid.
- C. The Response cannot be previewed directly.
- **D. A Response Action was not added to the integration Procedure.**

Answer: D

Explanation:

According to the OmniStudio Developer Guide, "To return a response from an Integration Procedure, add a Response action as the last action in your Integration Procedure." Therefore, the correct answer is C.

NEW QUESTION # 38

What OmniStudio tool pre-populates the data in a PDF used by an OmniScript?

- A. A DataRaptor Extract

- B. A DataRaptor Load
- C. A SOQL Query
- D. A DataRaptor Transform

Answer: D

Explanation:

According to the DataRaptor Transform Overview page, a DataRaptor Transform can be used to "pre- populate data in PDFs used by OmniScripts".

NEW QUESTION # 39

Why would a developer clone an Integration Procedure instead of versioning it?

- A. The new Integration Procedure will be used independently
- B. The new Integration Procedure it replacing stub data.
- C. The new Integration Procedure is Chainable.
- D. The new Integration Procedure uses a Cache Block.

Answer: A

Explanation:

Cloning an Integration Procedure creates a copy of it that can be modified and used independently from the original one. This is useful when the new Integration Procedure has a different purpose or functionality than the original one

NEW QUESTION # 40

Refer to the exhibit below.

In this Integration Procedure structure, which Send JSON Path should be used to send the output of the Action1 element to a Remote Action?

- A. BlockA:BlockB:Action1
- B. BlockA.BlockB.Action1
- C. Action1.BlockB.BlockA
- D. Action1:BlockB:BlockA

Answer: B

Explanation:

In OmniStudio Integration Procedures, when you want to reference the output of an element in a nested block (e.g., for use in a Remote Action or another step), you must use dot notation that mirrors the block structure hierarchy.

In the exhibit:

- * Action1 is nested inside:
- * BlockB, which is nested inside:
- * BlockA

Therefore, the correct Send JSON Path to access the result of Action1 is:

CopyEdit

BlockA.BlockB.Action1

This format complies with the standard output reference syntax in Integration Procedures, which follows the pattern:

php-template

CopyEdit

<ParentBlock>.<ChildBlock>.<ActionElement>

Incorrect Options:

- * B. BlockA:BlockB:Action1 - Uses colons instead of dots. This is invalid syntax in JSON path resolution within Integration Procedures.
- * C. Action1:BlockB:BlockA - Incorrect order and invalid separators.
- * D. Action1.BlockB.BlockA - Incorrect order (reversed path).
