

# Valid GitHub-Advanced-Security Learning Materials & Exam GitHub-Advanced-Security Cram Questions

2026 Latest Test4Cram GitHub-Advanced-Security PDF Dumps and GitHub-Advanced-Security Exam Engine Free Share: [https://drive.google.com/open?id=1y8PuoUfAegItKvkhmRhr3u91CIA\\_ikMo](https://drive.google.com/open?id=1y8PuoUfAegItKvkhmRhr3u91CIA_ikMo)

Just download the GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) PDF dumps file and start the GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam questions preparation right now. Whereas the other two GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) practice test software is concerned, both are the mock GitHub GitHub-Advanced-Security Exam Dumps and help you to provide the real-time GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) exam environment for preparation.

## GitHub GitHub-Advanced-Security Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Configure and use dependency management: This section of the exam measures skills of a DevSecOps Engineer and covers configuring dependency management workflows to identify and remediate vulnerable or outdated packages. Candidates will show how to enable Dependabot for version updates, review dependency alerts, and integrate these tools into automated CI</li><li>• CD pipelines to maintain secure software supply chains.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Configure and use code scanning: This section of the exam measures skills of a DevSecOps Engineer and covers enabling and customizing GitHub code scanning with built-in or marketplace rule sets. Examinees must know how to interpret scan results, triage findings, and configure exclusion or override settings to reduce noise and focus on high-priority vulnerabilities.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Describe the GHAS security features and functionality: This section of the exam measures skills of a GitHub Administrator and covers identifying and explaining the built-in security capabilities that GitHub Advanced Security provides. Candidates should be able to articulate how features such as code scanning, secret scanning, and dependency management integrate into GitHub repositories and workflows to enhance overall code safety.</li></ul>

## Exam GitHub-Advanced-Security Cram Questions | PDF GitHub-Advanced-Security Download

Test4Cram is a leading platform that has been helping the GitHub GitHub-Advanced-Security exam candidates for many years. Over this long time period, countless GitHub GitHub-Advanced-Security exam candidates have passed their dream GitHub Advanced Security GHAS Exam (GitHub-Advanced-Security) certification and they all got help from valid, updated, and Real GitHub-Advanced-Security Exam Questions. So you can also trust the top standard of GitHub GitHub-Advanced-Security exam

dumps and start GitHub-Advanced-Security practice questions preparation without wasting further time.

## GitHub Advanced Security GHAS Exam Sample Questions (Q54-Q59):

### NEW QUESTION # 54

Secret scanning will scan:

- A. A continuous integration system.
- B. External services.
- C. The GitHub repository.
- D. Any Git repository.

**Answer: C**

Explanation:

Secret scanning is a feature provided by GitHub that scans the contents of your GitHub repositories for known types of secrets, such as API keys and tokens. It operates within the GitHub environment and does not scan external systems, services, or repositories outside of GitHub. Its primary function is to prevent the accidental exposure of sensitive information within your GitHub-hosted code.

### NEW QUESTION # 55

What happens when you enable secret scanning on a private repository?

- A. Repository administrators can view Dependabot alerts.
- B. Your team is subscribed to security alerts.
- C. GitHub performs a read-only analysis on the repository.
- D. Dependency review, secret scanning, and code scanning are enabled.

**Answer: C**

Explanation:

When secret scanning is enabled on a private repository, GitHub performs a read-only analysis of the repository's contents. This includes the entire Git history and files to identify strings that match known secret patterns or custom-defined patterns. GitHub does not alter the repository, and enabling secret scanning does not automatically enable code scanning or dependency review - each must be configured separately.

### NEW QUESTION # 56

As a developer, you need to configure a code scanning workflow for a repository where GitHub Advanced Security is enabled. What minimum repository permission do you need?

- A. Write
- B. Admin
- C. Read
- D. None

**Answer: A**

Explanation:

To create or modify a code scanning workflow file (typically under `.github/workflows/codeql-analysis.yml`), you must have Write access to the repository.

Write permission allows you to commit the workflow file, which is required to run or configure code scanning using GitHub Actions.

### NEW QUESTION # 57

Which alerts do you see in the repository's Security tab? (Each answer presents part of the solution. Choose three.)

- A. Repository permissions
- B. Secret scanning alerts
- C. Dependabot alerts

- D. Code scanning alerts
- E. Security status alerts

**Answer: B,C,D**

Explanation:

In a repository's Security tab, you can view:

- \* Secret scanning alerts: Exposed credentials or tokens
- \* Dependabot alerts: Vulnerable dependencies from the advisory database
- \* Code scanning alerts: Vulnerabilities in code detected via static analysis (e.g., CodeQL) You won't see general "security status alerts" (not a formal category) or permission-related alerts here.

### NEW QUESTION # 58

If notification and alert recipients are not customized, which users receive notifications about new Dependabot alerts in an affected repository?

- A. Users with Maintain privileges to the repository
- B. Users with Read permissions to the repository
- C. Users with Write permissions to the repository
- D. Users with Admin privileges to the repository

**Answer: C**

Explanation:

By default, users with Write, Maintain, or Admin permissions will receive notifications for new Dependabot alerts. However, Write permission is the minimum level needed to be automatically notified.

Users with only Read access do not receive alerts unless added explicitly.

### NEW QUESTION # 59

.....

Test4Cram can satisfy the fundamental demands of candidates with concise layout and illegible outline of our exam questions. We have three versions of GitHub-Advanced-Security study materials and they are made for different habits and preference of you, Our PDF version of GitHub-Advanced-Security study guide is suitable for reading and printing requests. The second Software versions which are usable to windows system only with simulation test system for you to practice in daily life. The last App version of our GitHub-Advanced-Security Exam Dump is suitable for different kinds of electronic products. And there have no limitation for downloading.
