As long as you pay at our platform, we will deliver the relevant FCP\_FAC\_AD-6.5 Test Prep to your mailbox within 5-10 minutes. Our company attaches great importance to overall services, if there is any problem about the delivery of FCP\_FAC\_AD-6.5 test braindumps, please let us know, a message or an email will be available.

## Fortinet FCP—FortiAuthenticator 6.5 Administrator Sample Questions (Q67-Q72):

### NEW QUESTION # 67

An administrator wants users and devices that cannot be identified transparently, such as Android BYOD devices, to be able to register and create their own credentials.

In this case, which FortiAuthenticator user identity discovery method can the administrator use?

- A. SSOMA
- B. Syslog messaging or SAML IdP
- C. Portal authentication
- D. Kerberos-based authentication

**Answer: C**

Explanation:

Portal authentication allows unidentified users or devices, such as Android BYOD devices, to self-register and create credentials through a captive or guest portal on FortiAuthenticator.

### NEW QUESTION # 68

You are a network administrator with a large wireless environment. FortiAuthenticator acts as the RADIUS server for your wireless controllers. You want specific wireless controllers to authenticate users against specific realms.

How would you satisfy this requirement?

- A. Create Access point groups
- B. RADIUS policy
- C. Define RADIUS clients
- D. Enable Adaptive Authentication

**Answer: B**

**NEW QUESTION # 69**

At a minimum, which two configurations are required to enable captive portal services on FortiAuthenticator?  
(Choose two.)

- A. Configuring a RADIUS client
- **B. Configuring a portal policy**
- **C. Configuring at least one pre-login service**
- D. Configuring an external authentication portal

**Answer: B,C**

Explanation:

A pre-login service must be configured to define how users can access the portal before authentication.  
A portal policy is required to determine authentication rules and behavior for captive portal access.

**NEW QUESTION # 70**

What does SAML stand for in the context of SAML SSO service?

- A. Secure Access Markup Language
- B. Single Authentication Management Logic
- **C. Security Assertion Markup Language**
- D. System Authorization and Management Layer

**Answer: C**

**NEW QUESTION # 71**

Which option correctly describes an SP-initiated SSO SAML packet flow for a host without a SAML assertion?

- A. Principal contacts identity provider and authenticates, identity provider relays principal to service provider after valid authentication
- B. Service provider contacts identity provider, identity provider validates principal for service provider, service provider establishes communication with principal
- **C. Principal contacts service provider, service provider redirects principal to identity provider, after successful authentication identity provider redirects principal to service provider**
- D. Principal contacts identity provider and is redirected to service provider, principal establishes connection with service provider, service provider validates authentication with identity provider

**Answer: C**

Explanation:

In SP-initiated SSO, the principal (user) first attempts to access the service provider. The service provider redirects the principal to the identity provider for authentication, and upon successful authentication, the identity provider redirects the principal back to the service provider with the SAML assertion.

**NEW QUESTION # 72**
