It is a valuable credential for IT professionals, data analysts, security analysts, and anyone who works with data and wants to leverage the power of Splunk to gain insights and improve operational efficiency.

Splunk Core Certified Power User Exam Sample Questions (Q112-Q117):

NEW QUESTION # 112

If a search returns _____ it can be viewed as a chart.

- A. events
- B. timestamps
- C. keywords
- **D. statistics**

Answer: D

Explanation:

Explanation

If a search returns statistics, it can be viewed as a chart². Statistics are tabular data that show the relationship between two or more fields². You can create statistics by using commands such as stats, chart or timechart². You can view statistics as a chart by selecting the Visualization tab in the Search app and choosing a chart type such as column, line or pie². Therefore, option B is correct, while options A, C and D are incorrect because they are not types of data that can be viewed as a chart.

NEW QUESTION # 113

This search will return 20 results. SEARCH: error | top host limit = 20

- A. False
- **B. True**

Answer: B

NEW QUESTION # 114

Which of the following are required to create a POST workflow action?

- **A. Label, URI, post arguments.**
- B. URI, search string, time range picker.
- C. XMI attributes, URI, name.
- D. Label, URI, search string.

Answer: A

Explanation:

POST workflow actions are custom actions that send a POST request to a web server when you click on a field value in your search results. POST workflow actions can be configured with various options, such as label name, base URL, URI parameters, post arguments, app context, etc. One of the options that are required to create a POST workflow action is post arguments. Post arguments are key-value pairs that are sent in the body of the POST request to provide additional information to the web server. Post arguments can include field values from your data by using dollar signs around the field names.

NEW QUESTION # 115

which of the following commands are used when creating visualizations(select all that apply.)

- **A. Geostats**
- B. Choropleth
- **C. iplocation**
- **D. Geom**

Answer: A,C,D

Explanation:

The following commands are used when creating visualizations: geom, geostats, and iplocation.

Visualizations are graphical representations of data that show trends, patterns, or comparisons. Visualizations can have different types, such as charts, tables, maps, etc. Visualizations can be created by using various commands that transform the data into a suitable format for the visualization type. Some of the commands that are used when creating visualizations are:

- * geom: This command is used to create choropleth maps that show geographic regions with different colors based on some metric. The geom command takes a KMZ file as an argument that defines the geographic regions and their boundaries. The geom command also takes a field name as an argument that specifies the metric to use for coloring the regions.
- * geostats: This command is used to create cluster maps that show groups of events with different sizes and colors based on some metric. The geostats command takes a latitude and longitude field as arguments that specify the location of the events. The geostats command also takes a statistical function as an argument that specifies the metric to use for sizing and coloring the clusters.
- * iplocation: This command is used to create location-based visualizations that show events with different attributes based on their IP addresses. The iplocation command takes an IP address field as an argument
- * and adds some additional fields to the events, such as Country, City, Latitude, Longitude, etc. The iplocation command can be used with other commands such as geom or geostats to create maps based on IP addresses.

NEW QUESTION # 116

Which of these is NOT a field that is automatically created with the transaction command?

- A. maxcount
- B. eventcount
- C. duration

Answer: A

NEW QUESTION # 117
