Test 312-38 Dumps Pdf | Valid Dumps 312-38 Pdf

As for the points you may elapse or being frequently tested in the real exam, we give referent information, then involved them into our 312-38 practice materials. Their expertise about 312-38 practice materials is unquestionable considering their long-time research and compile. Furnishing exam candidates with highly effective materials, you can even get the desirable outcomes within one week. By concluding quintessential points into 312-38 practice materials, you can pass the exam with the least time while huge progress.

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q267-Q272):

NEW QUESTION # 267
Which of the following representatives in the incident response process are included in the incident response team? Each correct answer represents a complete solution. Choose all that apply.

- A. Sales representative
- B. Legal representative
- C. Technical representative
- D. Information security representative
- E. Human resources

- F. Lead investigator

Answer: B,C,D,E,F

Explanation:
Incident response is a process that detects a problem, determines the cause of an issue, minimizes the damages, resolves the problem, and documents each step of process for future reference. To perform all these roles, an incident response team is needed. The incident response team includes the following representatives who are involved in the incident response process: Lead investigator: The lead investigator is the manager of an incident response team. He is always involved in the creation of an incident response plan. The duties of a lead investigator are as follows:Keep the management updated.Ensure that the incident response moves smoothly and efficiently.Interview and interrogate the suspects and witnesses. Information security representative: The information security representative is a member of the incident response team who alerts the team about possible security safeguards that can impact their ability to respond to an incident. Legal representative: The legal representative is a member of the incident response team who ensures that the process follows all the laws during the response to an incident. Technical representative: Technical representative is a representative of the incident response team. More than one technician can be deployed to an incident. The duties of a technical representative are as follows:Perform forensic backups of the systems that are involved in an incident. Provide more information about the configuration of the network or system. Human resources: Human resources personnel ensure that the policies of the organization are enforced during the incident response process. They suspend access to a suspect if it is needed. Human resources personnel are closely related with the legal representatives and cover up the organization's legal responsibility.

NEW QUESTION # 268
Which filter to locate unusual ICMP request an Analyst can use in order to detect a ICMP probes from the attacker to a target OS looking for the response to perform ICMP based fingerprinting?

- A. (icmp.type==8 && ((!(icmp.code==8))
- B. (icmp.type==12) || (icmp.type==15| |(icmp.type==17)
- C. (icmp.type==14) || (icmp.type==15| |(icmp.type==17)
- D. (icmp.type==9 && ((!(icmp.code==9))

Answer: A

Explanation:
In the context of network security, ICMP fingerprinting is a technique used to determine the operating system of a target machine by analyzing its responses to ICMP requests. The correct filter to detect unusual ICMP requests that could be indicative of ICMP probes from an attacker is option B. This filter looks for ICMP echo requests (type 8) that do not have a corresponding echo reply (code 0). Since the code for an echo request is 0, the filter (!(icmp.code==8)) is used to exclude other ICMP messages with different codes.

NEW QUESTION # 269
Which of the following is a type of VPN that involves a single VPN gateway?

- A. Remote-access VPN
- B. PPTP VPN
- C. Extranet-based VPN
- D. Intranet-based VPN

Answer: C

Explanation:
Explanation/Reference:

NEW QUESTION # 270
Peter, a malicious hacker, obtains e-mail addresses by harvesting them from postings, blogs, DNS listings, and Web pages. He then sends a large number of unsolicited commercial e-mail (UCE) messages to these addresses. Which of the following e-mail crimes is Peter committing?

- A. E-mail bombing

- B. E-mail storm
- C. E-mail spam
- D. E-mail spoofing

Answer: C

Explanation:
Peter is performing spamming activity. Spam is a term that refers to the unsolicited e-mails sent to a large number of e-mail users. The number of such e-mails is increasing day by day, as most companies now prefer to use e-mails for promoting their products. Because of these unsolicited e-mails, legitimate e-mails take a much longer time to deliver to their destination. The attachments sent through spam may also contain viruses.
However, spam can be stopped by implementing spam filters on servers and e-mail clients.
Answer option C is incorrect. Mail bombing is an attack that is used to overwhelm mail servers and clients by sending a large number of unwanted e-mails. The aim of this type of attack is to completely fill the recipient's hard disk with immense, useless files, causing at best irritation, and at worst total computer failure. E-mail filtering and properly configuring email relay functionality on mail servers can be helpful for protection against this type of attack.
Answer option B is incorrect. An e-mail storm is a sudden spike of Reply All messages on an e-mail distribution list, usually caused by a controversial or misdirected message. Such storms start when multiple members of the distribution list reply to the entire list at the same time in response to an instigating message. Other members soon respond, usually adding vitriol to the discussion, asking to be removed from the list, or pleading for the cessation of messages. If enough members reply to these unwanted messages, this triggers a chain reaction of e-mail messages. The sheer load of traffic generated by these storms can render the e-mail servers carrying them inoperative, similar to a DDoS attack.
Some e-mail viruses also have the capacity to create e-mail storms, by sending copies of themselves to an infected user's contacts, including distribution lists, infecting the contacts in turn.
Answer option D is incorrect. E-mail spoofing is a term used to describe e-mail activity in which the sender address and other parts of the e-mail header are altered to appear as though the e-mail originated from a different source. E-mail spoofing is a technique commonly used for spam e-mail and phishing to hide the origin of an e-mail message. By changing certain properties of the e-mail, such as the From, Return-Path, and Reply- To fields (which can be found in the message header), ill-intentioned users can make the e-mail appear to be from someone other than the actual sender. The result is that, although the e-mail appears to come from the address indicated in the From field, it actually comes from another source.

NEW QUESTION # 271
Fill in the blank with the appropriate term. _____ is an open wireless technology standard for exchanging data over short distances from fixed and mobile devices.

Answer:

Explanation:
Bluetooth

NEW QUESTION # 272
......

Getting an authoritative IT certification will make a great difference to your career like 312-38 exam tests. The difficulty and profession of real questions need much time and energy to prepare, which can be solved by our 312-38 dumps torrent. The latest training materials are tested by IT experts and certified trainers who studied 312-38 Exam Questions for many years. The high quality of our vce braindumps are the guarantee of high passing score.
