NCP-MCA Exam is intended for individuals who have experience with automation and orchestration, as well as knowledge of public and private cloud environments. The NCP-MCA exam is ideal for IT professionals who are looking to advance their skills and demonstrate their expertise in multicloud management.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q21-Q26):

NEW QUESTION # 21

An administrator is trying to delete a category, but the option is greyed out.
Which two conditions could be causing this issue? (Choose two.)

- A. The category is user defined.
- B. The category is assigned to powered-on VMs.
- C. The category is part of a flow policy.
- D. The category is system defined.

Answer: C,D

Explanation:

Categories are key-value pairs that you can use to tag and filter entities in Nutanix. There are two types of categories: system defined and user defined. System defined categories are built-in and cannot be deleted. User defined categories are created by the administrator and can be deleted if they are not used in any policy. Policies are rules that apply actions or restrictions to entities based on their categories. Flow policies are policies that control the network security and visibility of VMs. If a category is part of a flow policy, it cannot be deleted unless the policy is removed or modified. Therefore, the two conditions that could prevent an administrator from deleting a category are: the category is system defined, or the category is part of a flow policy. Reference: Nutanix Support & Insights: This is the official Nutanix documentation for categories, where you can find information about the types, usage, and deletion of categories.

Nutanix Exam NCP-MCA Topic 1 Question 12 Discussion: This is a forum where you can find discussions and explanations for Nutanix certification exam questions, including question 12 from topic 1, which is related to your question.

Nutanix Flow Overview: This is a Nutanix community post where you can learn more about Nutanix Flow and its policies.

NEW QUESTION # 22

Which two providers does Calm integrate natively with? (Choose two.)

- A. AWS
- B. AHV
- C. Alibaba

Answer: A,B

Explanation:

Calm integrates natively with AWS and AHV as providers. A provider is a cloud platform or infrastructure that hosts the application VMs or services. Calm supports various providers such as Nutanix, AWS, Azure, GCP, VMware, and Kubernetes. AWS and AHV are two of the most commonly used providers in Calm, as they offer scalability, flexibility, and cost-efficiency for deploying applications. References: Nutanix Certified Professional - Multicloud Automation (NCP-MCA) Exam Blueprint Guide, page 11; Nutanix Calm User Guide, section 3.1.

NEW QUESTION # 23

Where would a Calm administrator find the archived application logs within Prism Central?

- A. Services > Calm > Projects
- B. Services > Calm > Settings
- C. Services > Calm > Applications

- D. Services > Calm > Blueprints

Answer: B

Explanation:

The archived application logs within Prism Central can be found under Services > Calm > Settings. Calm automatically archives run logs of the deleted applications and custom actions that are older than three months. The administrator can download the archives within 7 days from the time of archive creation. For a running application, data is not archived for the system-generated Create actions. Reference: Nutanix Support & Insights

NEW QUESTION # 24

A DevOps team is using Self-Service to manage its test environment. They want to allow developers to request the deployment of their own development VMs from the marketplace and manage day-2 operations without giving them full administrative access to Self-Service.

Which is the appropriate role to achieve this requirement?

- A. Developer
- B. Operator
- C. Project Admin
- **D. Consumer**

Answer: D

Explanation:

Nutanix Self-Service defines several user roles, each with specific permissions.

Documentation describes the Consumer role as:

- * Allowed to deploy applications from the Marketplace or assigned blueprints
- * Allowed to perform day-2 operations (power actions, snapshots, etc.)
- * Restricted from modifying blueprints, environments, or project configurations
- * Ideal for end users who need access to deploy and manage their workloads without administrator capabilities. This matches exactly what the DevOps team requires.

Why the other roles are incorrect

- * Developer (A): Can modify blueprints and environments - too much privilege.
- * Project Admin (C): Full control over project resources - far more access than needed.
- * Operator (D): Used for automation and operational oversight, not end-user VM deployment.

Thus, Consumer (B) is the correct and intended role.

NEW QUESTION # 25

Which action should an administrator use to request a static IP address from an IPAM solution?

- A. Pre-create
- B. Guest Customization
- **C. Create**
- D. Profile

Answer: C
