Latest Palo Alto Networks XSOAR-Engineer Dumps Pdf | XSOAR-Engineer Updated Test Cram

Nowadays, there are more and more people realize the importance of XSOAR-Engineer, because more and more enterprise more and more attention it. If someone pass the XSOAR-Engineer exam and own relevant certificates that mean he had good grasp of this field of knowledge, that is to say, he will be popular and valued by more enterprise. In order to help most candidates who want to Pass XSOAR-Engineer Exam, so we compiled such a study materials to make exam simply. Our XSOAR-Engineer guide torrent has gone through strict analysis and summary according to the past exam papers and the popular trend in the industry and are revised and updated according to the change of the syllabus and the latest development conditions in the theory and the practice.

Palo Alto Networks XSOAR Engineer Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which of the following is a basic setting that can be configured in an automation?

- A. Run On
- B. Compiler
- C. Schedule
- D. Summary

Answer: C

NEW QUESTION # 16

An administrator has noticed that an integration has failed to fetch incidents. Where would they go to download logs to troubleshoot the error?

- A. DashboardsandReports > System Health
- B. Go to the Marketplace > Download the Fix my XSOAR playbook pack > Run the playbook > Download logs from War Room
- C. Settings > About > System Diagnostics
- D. Settings > About > Troubleshooting > Set Log Level to Debug > Download Logs

Answer: D

NEW QUESTION # 17

What is the primary effect on a new file hash when it is added to the indicator exclusion list?

- A. It is not extracted, enriched, or given a new verdict.
- B. It is extracted and stored, but an "exclusion" tag is added, requiring manual review before it can affect any incidents.
- C. It is processed normally by enrichment automations, but the verdict is set to "benign".
- D. It is excluded from intelligence feeds that have a reliability score lower than "B - Usually reliable".

Answer: A

Explanation:

The Indicator Exclusion List feature in XSOAR is designed to prevent certain IOCs (file hashes, IPs, domains, etc.) from being processed by the platform. The Admin Guide explains that once an indicator is added to the exclusion list, XSOAR does not extract, enrich, score, or apply verdicts to that indicator during ingestion or field-change extraction. This ensures that benign internal hashes, test indicators, or noisy artifacts do not trigger incidents, enrichments, or correlation rules.

Option B does not reflect platform behavior-XSOAR does not create exclusion tags requiring manual review; instead, it completely bypasses extraction and enrichment. Option C is incorrect because excluded indicators do not undergo enrichment or verdict assignment at all. Option D incorrectly suggests that exclusion depends on feed reliability; the exclusion list applies globally and unconditionally.

Therefore, the correct interpretation per the documentation is that excluded indicators are never extracted or processed, aligning precisely with option A.

NEW QUESTION # 18

An incident has been created in the following state:

There is no playbook attached.

The War Room is available, but no commands have been run yet.

What is the status of the incident?

- A. Active.
- B. In-progress.
- **C. Pending.**
- D. Waiting.

Answer: C

Explanation:

The XSOAR Incident State Model defines several system statuses: Pending, Active, In-Progress, Done, and Closed. When an incident is newly created and has not yet had a playbook assigned or started-and no analyst actions (such as commands or work plan steps) have been taken-it remains in the Pending state.

Pending indicates that the incident exists in the system but has not yet begun active investigation or automated processing. The Admin Guide clarifies that an incident becomes Active only when a playbook starts or an analyst interacts with it. In-Progress is a manually applied user state indicating active human processing.

Waiting is used for blocked or paused tasks but does not apply at initial creation.

Because the War Room is available but unused, and no automation has begun, the incident fits the definition of Pending exactly.

Once a playbook were attached or a command were executed, the state would transition to Active.

Therefore, the documented correct answer is B: Pending.

NEW QUESTION # 19

An analyst runs the following command in a playbook task:

```
!ip ip=1.1.1.1
```

Which extraction mode needs to be enabled on the Advanced tab of the playbook task to synchronously extract indicators from the results of this command?

- A. Synchronous
- **B. Inline**
- C. Out of band
- D. Extract

Answer: B

NEW QUESTION # 20

.....

Most of the materials on the market do not have a free trial function. Even some of the physical books are sealed up and cannot be read before purchase. As a result, many students have bought materials that are not suitable for them and have wasted a lot of money. But XSOAR-Engineer guide torrent will never have similar problems, not only because XSOAR-Engineer exam torrent is strictly compiled by experts according to the syllabus, which are fully prepared for professional qualification examinations, but also because XSOAR-Engineer Guide Torrent provide you with free trial services. Before you purchase, you can log in to our website and download a free trial question bank to learn about XSOAR-Engineer study tool.
