## Latest International Code Council Fire-Inspector-II Test Voucher | Fire-Inspector-II Valid Exam Guide

With the unemployment rising, large numbers of people are forced to live their job. It is hard to find a high salary job than before. Many people are immersed in updating their knowledge. So people are keen on taking part in the Fire-Inspector-II exam. As you know, the competition between candidates is fierce. If you want to win out, you must master the knowledge excellently. And our Fire-Inspector-II study questions are the exact tool to get what you want. Just let our Fire-Inspector-II learning guide lead you to success!

## International Code Council 67 - Fire Inspector II Exam Sample Questions (Q74-Q79):

### NEW QUESTION # 74

A required standpipe shall be installed when the progress of construction above the lowest level of fire department access reaches a maximum of \_\_\_ ft.

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

1. Standpipe Requirements in Construction

According to International Fire Code (IFC) 2021, Section 3313.1, a temporary standpipe must be installed when construction progresses above 75 feet from the lowest level of fire department access.

This ensures firefighters have adequate water supply access during high-rise construction.

2. Why the 75-Foot Requirement?

Buildings exceeding 75 feet are classified as high-rise structures, where fire department hose streams may not reach upper levels efficiently.

A standpipe system provides a reliable water source for fire suppression during construction, reducing fire risk.

3. Verification of Other Options

Option A (30 feet) - Incorrect, as standpipes are not required at this height under IFC regulations.

Option B (40 feet) - Incorrect, as this is below the high-rise threshold and does not require standpipes yet.

Option C (55 feet) - Incorrect, as IFC specifically mandates standpipes at 75 feet, not 55 feet.

Reference Sources:

International Fire Code (IFC) 2021 - Section 3313.1 (Temporary Standpipe Requirements for Construction) NFPA 14: Standard for the Installation of Standpipes and Hose Systems ICC Fire Inspector II Study Guide (2021) Thus, the correct and verified answer is: D. 75 feet. #

**NEW QUESTION # 75**

Incineration operations must comply with which of the following requirements?

- **A. Incineration operations must stop if the fire code official determines that the odor is offensive to nearby residents**
- B. Fuel-fired incinerators must be preheated for at least 20 minutes before use
- C. Operators must be at least 21 years of age
- D. Incineration which creates an odor when burning requires a fire permit

**Answer: A**

Explanation:

IFC allows fire code officials to enforce odor control, requiring operations to stop if odors are offensive (D), aligning with public safety. Options A, B, and C are not standard requirements, with age limits (A) not specified, permits (B) not universally required for odors, and preheating time (C) not mandated. This fits the study guide's incineration regulations.

**NEW QUESTION # 76**

Compressed natural gas (CNG) motor vehicle fuel-dispensing equipment may be installed in which of the following locations?

- A. 40 ft. from trolley wires.
- B. 5 ft. from an undeveloped property line.
- **C. 20 ft. from a railroad track.**
- D. 15 ft. from a public street.

**Answer: C**

Explanation:

Compressed Natural Gas (CNG) motor vehicle fuel-dispensing equipment installation requirements are outlined in 2021 International Fire Code (IFC) Section 2208 - Compressed Natural Gas Motor Fuel- Dispensing Facilities.

IFC 2021, Section 2208.3 - Equipment Location and Protection:

Requires that CNG dispensing equipment be installed at least:

10 feet from property lines

20 feet from public streets, highways, sidewalks, or railroads

10 feet from buildings or structures

Why Other Options Are Incorrect?

A). 40 ft. from trolley wires.

The IFC does not specify a 40-ft requirement for trolley wires in relation to CNG fuel-dispensing equipment.

B). 15 ft. from a public street.

Incorrect because IFC 2208.3 states that the minimum required distance from a public street is 20 feet, not 15 feet.

D). 5 ft. from an undeveloped property line.

Incorrect, as the minimum clearance from any property line is 10 feet, not 5 feet.

# Correct answer: C. 20 ft. from a railroad track.

### NEW QUESTION # 77

Hazardous occupancies involved in the manufacturing of organic coatings:

- A. require only a manual fire alarm system.
- **B. require both manual and automatic fire alarm systems.**
- C. require only an automatic fire alarm system.
- D. do not require a fire alarm system.

**Answer: B**

Explanation:

Hazardous occupancies involved in organic coatings manufacturing are classified as Group H-2 or H-3 occupancies under the 2021 IFC. These facilities involve highly flammable materials, requiring both manual and automatic fire alarm systems for safety.

IFC 2021, Section 415.7 - Organic Coatings Manufacturing:

Requires that automatic fire alarm and manual fire alarm systems be installed due to the high risk of fire and explosion in these facilities.

IFC 907.2.4 - Fire Alarm Systems for Group H Occupancies:

Specifies that Group H (high-hazard) occupancies must have both manual and automatic fire alarm systems.

The automatic fire alarm system ensures immediate detection, while the manual system allows for human activation in case of emergencies.

Why Other Options Are Incorrect?

A: Do not require a fire alarm system.

Incorrect, as all high-hazard occupancies require fire alarm systems.

B: Require only a manual fire alarm system.

Incorrect, as automatic detection is also required due to high fire risk.

C: Require only an automatic fire alarm system.

Incorrect, as manual activation is necessary for early intervention.

### NEW QUESTION # 78

How long should the fire prevention bureau maintain fire inspection records on a commercial structure?

- A. A maximum of five years.
- B. Until the building is renovated or has a change of occupancy.
- **C. For the life of the building.**
- D. At least one year or until the next fire inspection, whichever is later.

**Answer: C**

Explanation:

Retention of Fire Inspection Records

The International Fire Code (IFC) and NFPA 1 specify that records related to fire inspections, violations, and compliance must be maintained for the lifetime of the building.

This ensures a continuous history of inspections, violations, and fire prevention measures, which is critical for enforcement, legal action, and future compliance reviews.

2. Verification of Other Options

Option B (A maximum of five years) - This is incorrect because fire records must be retained longer than five years to ensure historical tracking of fire hazards and compliance over the lifespan of a structure.

Option C (Until the building is renovated or has a change of occupancy) - Renovation or occupancy change does not eliminate past fire risks, so previous records must still be maintained. Incorrect.

Option D (At least one year or until the next fire inspection, whichever is later) - This timeframe is too short and does not comply with NFPA 1 and IFC record-keeping requirements. Incorrect.

Reference Sources:

International Fire Code (IFC) 2021 - Section 104.6 (Records)

NFPA 1: Fire Code (Records Retention Requirements)
