

Associate-Data-Practitioner真題材料， Associate-Data-Practitioner認證題庫

此外，這些PDFExamDumps Associate-Data-Practitioner考試題庫的部分內容現在是免費的：<https://drive.google.com/open?id=1IBI0s-ZIFMQZbh7WHsBLiHjjCHfuATA>

PDFExamDumps Google的Associate-Data-Practitioner考試培訓資料得到廣大考生的稱譽已經不是最近幾天的事情了，說明PDFExamDumps Google的Associate-Data-Practitioner考試培訓資料信得過，確實可以幫助廣大考生通過考試，讓考生沒有後顧之憂，PDFExamDumps Google的Associate-Data-Practitioner考試培訓資料暢銷和同行相比一直遙遙領先，率先得到廣大消費者的認可，口碑當然不用說，如果你要參加 Google的Associate-Data-Practitioner考試，就趕緊進PDFExamDumps這個網站，相信你一定會得到你想要的，不會錯過就不會後悔，如果你想成為最專業最受人矚目的IT專家，那就趕緊加入購物車吧。

Google Associate-Data-Practitioner 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">• Data Preparation and Ingestion: This section of the exam measures the skills of Google Cloud Engineers and covers the preparation and processing of data. Candidates will differentiate between various data manipulation methodologies such as ETL, ELT, and ETLT. They will choose appropriate data transfer tools, assess data quality, and conduct data cleaning using tools like Cloud Data Fusion and BigQuery. A key skill measured is effectively assessing data quality before ingestion.
主題 2	<ul style="list-style-type: none">• Data Management: This domain measures the skills of Google Database Administrators in configuring access control and governance. Candidates will establish principles of least privilege access using Identity and Access Management (IAM) and compare methods of access control for Cloud Storage. They will also configure lifecycle management rules to manage data retention effectively. A critical skill measured is ensuring proper access control to sensitive data within Google Cloud services

主題 3	<ul style="list-style-type: none"> • Data Analysis and Presentation: This domain assesses the competencies of Data Analysts in identifying data trends, patterns, and insights using BigQuery and Jupyter notebooks. Candidates will define and execute SQL queries to generate reports and analyze data for business questions. Data Pipeline Orchestration: This section targets Data Analysts and focuses on designing and implementing simple data pipelines. Candidates will select appropriate data transformation tools based on business needs and evaluate use cases for ELT versus ETL.

優秀的Associate-Data-Practitioner真題材料 |高通過率的考試材料|快速下載Associate-Data-Practitioner認證題庫

彰顯一個人在某一領域是否成功往往體現在他所獲得的資格證書上，在IT行業也不外如是。所以現在很多人都選擇參加Associate-Data-Practitioner資格認證考試來證明自己的實力。但是要想通過Associate-Data-Practitioner資格認證卻不是一件簡單的事。不過只要你找對了捷徑，通過考試也就變得容易許多了。這就不得不推薦PDFExamDumps的考試考古題了，它可以讓你少走許多彎路，節省時間幫助你考試合格。

最新的 Google Cloud Platform Associate-Data-Practitioner 免費考試真題 (Q22-Q27):

問題 #22

You are constructing a data pipeline to process sensitive customer data stored in a Cloud Storage bucket. You need to ensure that this data remains accessible, even in the event of a single-zone outage. What should you do?

- **A. Store the data in a multi-region bucket.**
- B. Enable Object Versioning on the bucket.
- C. Set up a Cloud CDN in front of the bucket.
- D. Store the data in Nearline storage.

答案: A

解題說明:

Storing the data in a multi-region bucket ensures high availability and durability, even in the event of a single-zone outage. Multi-region buckets replicate data across multiple locations within the selected region, providing resilience against zone-level failures and ensuring that the data remains accessible. This approach is particularly suitable for sensitive customer data that must remain available without interruptions.

問題 #23

Your organization sends IoT event data to a Pub/Sub topic. Subscriber applications read and perform transformations on the messages before storing them in the data warehouse. During particularly busy times when more data is being written to the topic, you notice that the subscriber applications are not acknowledging messages within the deadline. You need to modify your pipeline to handle these activity spikes and continue to process the messages. What should you do?

- **A. Forward unacknowledged messages to a dead-letter topic.**
- B. Seek back to the last acknowledged message.
- C. Retry messages until they are acknowledged.
- B Implement flow control on the subscribers

答案: A

解題說明:

Implementing flow control on the subscribers allows the subscriber applications to manage message processing during activity spikes by controlling the rate at which messages are pulled and processed. This prevents overwhelming the subscribers and ensures that messages are acknowledged within the deadline. Flow control helps maintain the stability of your pipeline during high-traffic periods without dropping or delaying messages unnecessarily.

問題 #24

You work for a healthcare company. You have a daily ETL pipeline that extracts patient data from a legacy system, transforms it, and loads it into BigQuery for analysis. The pipeline currently runs manually using a shell script. You want to automate this process and add monitoring to ensure pipeline observability and troubleshooting insights. You want one centralized solution, using open-source tooling, without rewriting the ETL code. What should you do?

- A. Create a Cloud Run function that runs the pipeline daily. Monitor the functions execution using Cloud Monitoring.
- B. Configure Cloud Dataflow to implement the ETL pipeline, and use Cloud Scheduler to trigger the Dataflow pipeline daily. Monitor the pipelines execution using the Dataflow job monitoring interface and Cloud Monitoring.
- C. Use Cloud Scheduler to trigger a Dataproc job to execute the pipeline daily. Monitor the job's progress using the Dataproc job web interface and Cloud Monitoring.
- **D. Create a direct acyclic graph (DAG) in Cloud Composer to orchestrate a pipeline trigger daily. Monitor the pipeline's execution using the Apache Airflow web interface and Cloud Monitoring.**

答案: D

解題說明:

Comprehensive and Detailed in Depth Explanation:

Why A is correct: Cloud Composer is a managed Apache Airflow service, which is a popular open-source workflow orchestration tool.

DAGs in Airflow can be used to automate ETL pipelines.

Airflow's web interface and Cloud Monitoring provide comprehensive monitoring capabilities.

It also allows you to run existing shell scripts.

Why other options are incorrect: B: Dataflow requires rewriting the ETL pipeline using its SDK.

C: Dataproc is for big data processing, not orchestration.

D: Cloud Run functions are for stateless applications, not long-running ETL pipelines.

問題 #25

You are a database administrator managing sales transaction data by region stored in a BigQuery table. You need to ensure that each sales representative can only see the transactions in their region. What should you do?

- A. Add a policy tag in BigQuery.
- **B. Create a row-level access policy.**
- C. Grant the appropriate IAM permissions on the dataset.
- D. Create a data masking rule.

答案: B

解題說明:

Creating a row-level access policy in BigQuery ensures that each sales representative can see only the transactions relevant to their region. Row-level access policies allow you to define fine-grained access control by filtering rows based on specific conditions, such as matching the sales representative's region. This approach enforces security while providing tailored data access, aligning with the principle of least privilege.

Extract from Google Documentation: From "Row-Level Security in BigQuery" ([https://cloud.google.com](https://cloud.google.com/bigquery/docs/row-level-security)

[/bigquery/docs/row-level-security](https://cloud.google.com/bigquery/docs/row-level-security)): "Row-level access policies let you restrict access to specific rows in a table based on a filter condition, such as a user's region, providing fine-grained control over data visibility without creating separate tables or views."

問題 #26

Your company has several retail locations. Your company tracks the total number of sales made at each location each day. You want to use SQL to calculate the weekly moving average of sales by location to identify trends for each store. Which query should you use?

- A.
- B.
- C.
- D.

答案：D

解題說明：

To calculate the weekly moving average of sales by location:

The query must group by store_id (partitioning the calculation by each store).

The ORDER BY date ensures the sales are evaluated chronologically.

The ROWS BETWEEN 6 PRECEDING AND CURRENT ROW specifies a rolling window of 7 rows (1 week if each row represents daily data).

The AVG(total_sales) computes the average sales over the defined rolling window.

Chosen query meets these requirements:

問題 #27

.....

一生輾轉千萬裏，莫問成敗重幾許，得之坦然，失之淡然，與其在別人的輝煌裏仰望，不如親手點亮自己的心燈，揚帆遠航。PDFExamDumps Google的Associate-Data-Practitioner考試培訓資料將是你成就輝煌的第一步，有了它，你一定會通過眾人都覺得艱難無比的Google的Associate-Data-Practitioner考試認證，獲得了這個認證，你就可以在你人生中點亮你的心燈，開始你新的旅程，展翅翱翔，成就輝煌人生。
