

100% Pass 2026 Perfect JN0-683: Data Center, Professional (JNCIP-DC) Reliable Real Exam

BONUS!!! Download part of PassTorrent JN0-683 dumps for free: <https://drive.google.com/open?id=1qFz9caD7rrPoX0S6PVVqzs01nqXPhzyl>

Juniper JN0-683 study materials will be very useful for all people to improve their learning efficiency. If you do all things with efficient, you will have a promotion easily. If you want to spend less time on preparing for your JN0-683 Exam, if you want to pass your JN0-683 exam and get the certification in a short time, our Data Center, Professional (JNCIP-DC) JN0-683 study materials will be your best choice to help you achieve your dream.

Our company is a professional certificate exam materials provider, therefore we have rich experiences in offering exam dumps. JN0-683 study materials are famous for high quality, and we have received many good feedbacks from our customers, and they think highly of our JN0-683 exam dumps. Moreover, we also pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you refund and no other questions will be asked. JN0-683 Training Materials have free update for 365 days after purchasing, and the update version will be sent to you email automatically.

JN0-683 Reliable Real Exam - Free PDF 2026 Juniper Realistic Data Center, Professional (JNCIP-DC) Exams Collection

The JN0-683 PDF works on smart phones, tablets, and laptops. Windows computers support the JN0-683 desktop practice test software. No software installation is necessary for the web-based Juniper Exam practice exam. All operating systems (Mac, Linux, Android, iOS, Windows) and major browsers support the JN0-683 web-based practice exam.

Juniper JN0-683 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Data Center Interconnect: For Data Center Engineers, this part focuses on interconnecting data centers, covering Layer 2 and Layer 3 stretching, stitching fabrics together, and using EVPN-signaled VXLAN for seamless communication between data centers.
Topic 2	<ul style="list-style-type: none"> Data Center Multitenancy and Security: This section tests knowledge of single-tenant and multitenant data center setups. Candidates such as Data Center Professionals are evaluated on ensuring tenant traffic isolation at both Layer 2 and Layer 3 levels in shared infrastructure environments.

- **EVPN-VXLAN Signaling:** This section assesses an understanding of Ethernet VPN (EVPN) concepts, including route types, multicast handling, and Multiprotocol BGP (MBGP). It also covers EVPN architectures like CRB and ERB, MAC learning, and symmetric routing.

Juniper Data Center, Professional (JNCIP-DC) Sample Questions (Q35-Q40):

NEW QUESTION # 35

You are deploying an IP fabric using EBGp and notice that your leaf devices are advertising and receiving all the routes. However, the routes are not installed in the routing table and are marked as hidden.

Which two statements describe how to solve the issue? (Choose two.)

- A. You need to configure a next-hop self policy.
- B. You need to configure multipath multiple-as.
- C. You need to configure loops 2.
- D. You need to configure as-override.

Answer: A,B

NEW QUESTION # 36

Exhibit.

You are troubleshooting a DCI connection to another data center. The BGP session to the provider is established, but the session to Border-Leaf-2 is not established. Referring to the exhibit, which configuration change should be made to solve the problem?

- A. delete protocols bgp group OVERLAY accept-remote-nexthop
- B. set protocols bgp group overlay export loopbacks
- C. set protocols bgp group PROVIDER export LOOPBACKS
- D. delete protocols bgp group UNDERLAY advertise-external

Answer: A

Explanation:

* Understanding the Configuration:

* The exhibit shows a BGP configuration on a Border-Leaf device. The BGP group UNDERLAY is used for the underlay network, OVERLAY for EVPN signaling, and PROVIDER for connecting to the provider network.

* The OVERLAY group has the accept-remote-nexthop statement, which is designed to accept the next-hop address learned from the remote peer as is, without modifying it.

* Problem Identification:

* The BGP session to Border-Leaf-2 is not established. A common issue in EVPN-VXLAN environments is related to next-hop reachability, especially when accept-remote-nexthop is configured.

* In typical EVPN-VXLAN setups, the next-hop address should be reachable within the overlay network. However, the accept-remote-nexthop can cause issues if the next-hop IP address is not directly reachable or conflicts with the expected behavior in the overlay.

* Corrective Action:

* D. delete protocols bgp group OVERLAY accept-remote-nexthop: Removing this command will ensure that the device uses its own IP address as the next-hop in BGP advertisements, which is standard practice in many EVPN-VXLAN setups. This change should help establish the BGP session with Border-Leaf-2.

Data Center References:

* Proper handling of BGP next-hop attributes is critical in establishing and maintaining stable BGP sessions, especially in complex multi-fabric environments like EVPN-VXLAN. Removing accept-remote-nexthop aligns with best practices in many scenarios.

NEW QUESTION # 37

You are asked to implement VXLAN group-based policies (GBPs) in your data center. Which two statements are correct in this scenario? (Choose two.)

- A. VXLAN GBP uses scalable group tags that must be configured statically on each switch and activated through 802.1X.
- B. VXLAN GBP ensures consistent application of BGP groups throughout the network.

- C. VXLAN GBP ensures consistent application of security group policies throughout the network.
- D. VXLAN GBP uses scalable group tags that may be configured on a RADIUS server and pushed to the switch through 802.1X.

Answer: C,D

Explanation:

* VXLAN Group-Based Policies (GBP):

* VXLAN Group-Based Policies are used to apply security policies consistently across the network. These policies are often tied to user or device identities rather than static IP addresses, which allows for more dynamic and scalable security management.

* Scalable Group Tags via RADIUS and 802.1X:

* Option B:VXLAN GBP can use scalable group tags configured on a RADIUS server, which are then pushed to network devices through 802.1X. This allows for centralized and automated policy application based on user or device identity.

* Consistent Security Policy Application:

* Option C:GBP ensures that security policies are consistently applied across the network, regardless of where a user or device connects. This consistency is crucial in environments where security policies must follow the user or device.

Conclusion:

* Option B:Correct-Group tags can be configured on a RADIUS server and pushed via 802.1X, enabling centralized policy management.

* Option C:Correct-GBP ensures consistent application of security policies, which is essential for maintaining security across a dynamic network environment.

NEW QUESTION # 38

Exhibit.

You have a sample configuration for connecting two sites through EVPN-VXLAN by exchanging IP prefix routes.

Referring to the exhibit, which two statements regarding the configuration are true? (Choose two.)

- A. The advertise direct-next-hop option enables the receiver to resolve the next-hop route using only information carried in the Type 2 route.
- B. The VNI must match on all devices for the same customer.
- C. The advertise direct-next-hop option enables the receiver to resolve the next-hop route using only information carried in the Type 5 route.
- D. The VNI should be unique on all devices for each customer site.

Answer: B,C

Explanation:

EVPN-VXLAN Configuration:

* The configuration provided in the exhibit shows an EVPN-VXLAN setup where IP prefix routes are exchanged between two sites. The advertise direct-next-hop option and the VNI (Virtual Network Identifier) settings are crucial in this context.

Advertise Direct-Next-hop:

* Option A:The advertise direct-next-hop option ensures that the next-hop route is resolved using only the information carried in the EVPN Type 5 route. Type 5 routes are used for IP prefix advertisement in EVPN, which is key to enabling Layer 3 interconnectivity between different VXLAN segments.

VNI Consistency:

* Option C:For the same customer across different devices, the VNI must be consistent. This consistency ensures that all devices can correctly map traffic to the appropriate VXLAN segment, maintaining seamless Layer 2 and Layer 3 connectivity.

NEW QUESTION # 39

Referring to the exhibit, which statement is true?

- A. An OTT architecture is being used.
- B. A CRB architecture is being used.
- C. An ERB architecture is being used.
- D. A PBB-EVPN architecture is being used.

Answer: C

Explanation:

The configuration provided in the exhibit indicates an EVPN-VXLAN setup with routing instances, VLANs, and associated VXLANs. Specifically, there are routing instances with IRB interfaces (Integrated Routing and Bridging) and associated VLANs, as well as VNI assignments, which are key elements in an Enhanced Routed Bridging (ERB) architecture. This architecture supports both Layer 2 and Layer 3 connectivity with VXLAN for bridging and routing.

NEW QUESTION # 40

.....

It is the dream of every certification candidate to crack the Data Center, Professional (JNCIP-DC) JN0-683 examination on the first sitting. Success in the Data Center, Professional (JNCIP-DC) JN0-683 exam brings multiple career benefits. You become eligible for high-paying jobs and promotions in your current firm after earning the Data Center, Professional (JNCIP-DC) JN0-683 Certification. Since the Data Center, Professional (JNCIP-DC) JN0-683 exam registration fee is hefty, therefore, you will not want to fail the JN0-683 Exam and pay this fee for the second time.
