NEW QUESTION # 227

You create a desktop flow to interact with a certification authority's website.

You need to get data in and out of the desktop flow.

How should you set up the input and output parameters? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Parameter direction	Configuration
Inbound	<input type="text"/> Copy and paste qualification data into the desktop flow. Run a cloud flow from the Dataverse qualification record to send data to the desktop flow. Connect by using the Dataverse connector from the desktop flow and retrieve the qualification data.
Outbound	<input type="text"/> Copy and paste the verification data into the qualification record. Send data from the desktop flow to a cloud flow to update the qualification record. Connect by using the Dataverse connector from the desktop flow and the qualification record

Answer:

Explanation:

Parameter direction	Configuration
Inbound	<input type="text"/> Copy and paste qualification data into the desktop flow. Run a cloud flow from the Dataverse qualification record to send data to the desktop flow. Connect by using the Dataverse connector from the desktop flow and retrieve the qualification data.
Outbound	<input type="text"/> Copy and paste the verification data into the qualification record. Send data from the desktop flow to a cloud flow to update the qualification record. Connect by using the Dataverse connector from the desktop flow and the qualification record

Explanation

Box 1: Connect by using the Dataverse connector from the desktop flow and retrieve the qualification data.

All information sent by clients for services is stored in Microsoft Dataverse with a model-driven app as the interface.

Qualification verification

The qualification table contains details about an individual school degree, professional qualifications, and other qualifications that must be verified.

A service request can have one or more Qualification records associated with it.

Record status is pending verification until the initial team member finishes, at which point the member changes the status to Complete.

When all qualification records related to a service request are verified either by manual or automated processes, the results are made available to ADatum Corporation's client.

In the rare event that results are questioned, a new service request is created and verified independently of the previous work that took place.

Box 2: Send data from the desktop flow to a cloud flow to update the qualification record.

To complete a service request, users perform the following actions:

Send a templated email by using Microsoft Outlook to the client after all qualifications for a service request are checked.

Change the service request status to Completed. Currently, service requests do not indicate when all Qualification records are addressed.

NEW QUESTION # 228

The business team provides the following list of features that they would like you to implement:

- * Group by or sort columns in the current view.
- * Configure a business rule to show an error message.
