ECCouncil Certified Cybersecurity Technician Sample Questions (Q111-Q116):

NEW QUESTION # 111

Warren, a member of IH&R team at an organization, was tasked with handling a malware attack launched on one of servers connected to the organization's network. He immediately implemented appropriate measures to stop the infection from spreading to other organizational assets and to prevent further damage to the organization.

Identify the IH&R step performed by Warren in the above scenario.

- A. Recovery
- **B. Containment**
- C. Incident triage
- D. Eradication

Answer: B

NEW QUESTION # 112

Maisie, a new employee at an organization, was given an access badge with access to only the first and third floors of the organizational premises. Maisie held scanning her access badge against the badge reader at the second-floor entrance but was unsuccessful. Identify the short-range wireless communication technology used by the organization in this scenario.

- **A. RFID**
- B. Bluetooth
- C. Li-Fi
- D. Wi-Fi

Answer: A

Explanation:

RFID (Radio Frequency Identification) is a short-range wireless communication technology that uses radio waves to identify and track objects. RFID tags are attached to objects and RFID readers scan the tags to obtain the information stored in them. RFID is commonly used for access control, inventory management, and identification.

NEW QUESTION # 113

Kaison, a forensic officer, was investigating a compromised system used for various online attacks. Kaison initiated the data acquisition process and extracted the data from the system's DVD-ROM. Which of the following types of data did Kaison acquire in the above scenario?

- A. ARP cache
- B. Kernel statistics
- **C. Archival media**
- D. Processor cache

Answer: C

Explanation:

Archival media is the type of data that Kaison acquired in the above scenario. Archival media is a type of data that is stored on removable media such as DVD-ROMs, CD-ROMs, tapes, or flash drives. Archival media can be used to backup or transfer data.

from one system to another. Archival media can be acquired using forensic tools that can read and copy the data from the media.⁴

NEW QUESTION # 114

Warren, a member of IH&R team at an organization, was tasked with handling a malware attack launched on one of servers connected to the organization's network. He immediately implemented appropriate measures to stop the infection from spreading to other organizational assets and to prevent further damage to the organization.

Identify the IH&R step performed by Warren in the above scenario.

- A. Recovery
- **B. Containment**
- C. Incident triage
- D. Eradication

Answer: B

Explanation:

Containment is the IH&R step performed by Warren in the above scenario. IH&R (Incident Handling and Response) is a process that involves identifying, analyzing, containing, eradicating, recovering from, and reporting on security incidents that affect an organization's network or system. Containment is the IH&R step that involves implementing appropriate measures to stop the infection from spreading to other organizational assets and to prevent further damage to the organization. Containment can be done by isolating the affected system or network, blocking malicious traffic or communication, disabling or removing malicious accounts or processes, etc. Recovery is the IH&R step that involves restoring the normal operation of the system or network after eradicating the incident. Eradication is the IH&R step that involves removing all traces of the incident from the system or network, such as malware, backdoors, compromised files, etc. Incident triage is the IH&R step that involves prioritizing incidents based on their severity, impact, and urgency.

NEW QUESTION # 115

An IoT device placed in a hospital for safety measures has sent an alert to the server. The network traffic has been captured and stored in the Documents folder of the "Attacker Machine-1". Analyze the IoTdeviceTraffic.pcapng file and identify the command the IoT device sent over the network.

- **A. Temp_High**
- B. Tempe_Low
- C. High_Tempe
- D. Low_Temp e

Answer: A

Explanation:

The IoT device sent the command Temp_High over the network, which indicates that the temperature in the hospital was above the threshold level. This can be verified by analyzing the IoTdeviceTraffic.pcapng file using a network protocol analyzer tool such as Wireshark. The command Temp_High can be seen in the data field of the UDP packet sent from the IoT device (192.168.0.10) to the server (192.168.0.1) at 12:00:03.
