ACP-120認證題庫 - ACP-120考題免費下載

VCESoft 考題大師始終致力於為客戶提供 ATLASSIAN 認證的全真考題及認證學習資料，該題庫根據 ATLASSIAN 的 ACP-120 考試的變化動態更新，能夠時刻保持題庫最新、最全、最具權威性。能夠幫助您一次通過 ACP-120 認證考試。在購買ACP-120 考試題庫之前，你還可以下載免費的考古題樣本作為試用。這樣你就可以自己判斷這個資料是不是適合自己。

最新的 Jira Administrator ACP-120 免費考試真題 (Q32-Q37):

問題 #32

You are setting up Jira Software Cloud for an organization of 250 employees. Product access is already configured to grant new users access to Jira Software by default. You now need to configure site access so that it meets these 3 conditions:

1. Minimum administration overhead is required
2. Access is granted to the entire organization at the same time
3. Access is restricted only to your organization

Which solution meets these requirements? (Choose one)

- **A. Add all your company's domains as approved domains**
- B. Enable existing users to send invitations to all current and future employees
- C. Create an invite link and share it with all current and future employees
- D. Set the global mode to public and enable CAPTCHA on sign up
- E. Approve any domain in the site access settings

答案: A

問題 #33

An excerpt of the DEV permission scheme is shown:

Project Permissions | Users / Groups / Project Roles

Administer Projects | Project Role (Administrators)

View Development Tools | Project Role (Core), Project Role (Sprint Team) Manage Sprints | Project Role (atlassian-addons-project-access), Project Role (Core) Ahmed is a project administrator in DEV and not a Jira administrator. He is unable to create sprints in DEV.

What should Ahmed do?

- A. Add himself to the Core project role
- B. Add himself to the Sprint Team project role
- **C. Add the Administrators project role to the 'Manage Sprints' permission**
- D. Add the Administrators project role to the 'View Development Tools' permission

答案: C

解題說明:

Ahmed is a project administrator in the DEV project, which means he is in the Administrators project role (as per the permission scheme, where Administer Projects is granted to this role). However, he cannot create sprints because he lacks the Manage Sprints permission, which is granted to the atlassian-addons-project-access and Core project roles. To resolve this, Ahmed should add the Administrators project role to the 'Manage Sprints' permission (Option D).

* Explanation of the Correct Answer (Option D):

* The Manage Sprints permission allows users to create, start, complete, or delete sprints in a project. According to the permission scheme, this permission is granted to the atlassian-addons-project-access and Core project roles, but not to the Administrators project role, which Ahmed belongs to.

* As a project administrator, Ahmed has the Administer Projects permission, which allows him to modify the project's permission scheme (via Project settings > Permissions) and add the Administrators project role to the Manage Sprints permission. This will grant him the ability to create sprints without needing Jira administrator privileges.

* Exact Extract from Documentation:

Manage Sprints permission

The Manage Sprints permission allows users to create, start, complete, or delete sprints in a project. This permission is granted via the project's permission scheme.

To update permissions:

* Go to Project settings > Permissions.

* Edit the permission scheme and add a user, group, or project role (e.g., Administrators) to the Manage Sprints permission. Note: Project administrators can modify the permission scheme for their project if they have the Administer Projects permission. (Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Why This Fits: Adding the Administrators project role to the Manage Sprints permission directly addresses Ahmed's lack of permission to create sprints, leveraging his existing project administrator privileges.

* Why Other Options Are Incorrect:

* Add himself to the Core project role (Option A):

* Adding himself to the Core project role would grant Ahmed the Manage Sprints permission, as this role is listed for that permission. However, as a project administrator, Ahmed can modify the permission scheme directly instead of adding himself to another role,

which may grant unnecessary permissions (e.g., View Development Tools). Option D is more appropriate, as it aligns with his administrative role.

* Extract from Documentation:

Project roles are managed in Project settings > People. Adding a user to a role grants all permissions associated with that role, which may include more than needed.

(Source: Atlassian Support Documentation, "Manage project roles")

* Add himself to the Sprint Team project role (Option B):

* The Sprint Team project role is only listed for the View Development Tools permission, not Manage Sprints. Adding himself to this role would not grant Ahmed the ability to create sprints.

* Extract from Documentation:

Permissions are granted to specific roles or groups in the permission scheme. Verify the roles assigned to each permission before adding users.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Add the Administrators project role to the 'View Development Tools' permission (Option C)

:

* The View Development Tools permission allows users to view development-related information (e.g., commits, builds). It is unrelated to creating sprints, so adding the Administrators role to this permission would not help Ahmed.

* Extract from Documentation:

The View Development Tools permission grants access to development information, not sprint management.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Additional Notes:

* Ahmed's ability to modify the permission scheme depends on his Administer Projects permission, which is confirmed by his role as a project administrator.

* The atlassian-addons-project-access role is typically used for system or app-related permissions and is not relevant for Ahmed to modify.

* After adding the Administrators role to Manage Sprints, Ahmed and other administrators will gain sprint management capabilities.

問題 #34

A team requests updates to the behavior of some fields in the project. The project uses three issue types: Problem, Incident, and Change.

The desired configuration is shown below:

Issue Type	Severity (custom field)	Impact (custom field)	Priority (system field)
Problem	Required	Required	Hidden
Incident	Required	Required	Shown and optional
Change	Hidden	Hidden	Required

Which configuration update will meet the requirements?

- A. Configure individual screens for any combination of issue operation and issue type.
- **B. Configure individual field contexts for each custom field and update the priority scheme.**
- C. Configure individual field configuration for each custom field and update the priority scheme.
- D. Configure individual screens for each issue type and update the priority scheme.
- E. Create unique field contexts for each issue type for the desired fields.
- F. Configure individual field configurations for each issue type.

答案: B

問題 #35

George is the project lead of several projects. Now, he needs to create projects but should not have Jira administrator privileges. What does George need?

- A. Product access

- B. Project permission
- C. Project role
- D. Product role
- E. Global permission

答案： E

解題說明：

To create projects in Jira Software Cloud without having full Jira administrator privileges, George needs a specific global permission, namely the Create Projects permission. This permission allows users to create new projects without granting them broader administrative access.

* Explanation of the Correct Answer (Option D):

* The Create Projects global permission enables a user to create new projects in Jira. This permission is distinct from Jira administrator privileges, which include managing global settings like schemes, users, and workflows. By granting George this permission, he can create projects while maintaining a limited scope of authority.

* Exact Extract from Documentation:

Global permissions

Global permissions control access to system-wide actions in Jira. The Create Projects permission allows users to create new projects without requiring full Jira administrator privileges.

To grant this permission:

* Go to Settings > System > Global permissions.

* Add a user, group, or role to the Create Projects permission. Note: Users with this permission can create projects but cannot modify global configurations like schemes or user management unless they have additional permissions. (Source: Atlassian Support Documentation, "Manage global permissions")

* Why This Fits: The Create Projects global permission directly addresses the requirement for George to create projects without needing Jira administrator privileges, making Option D the correct choice.

* Why Other Options Are Incorrect:

* Project role (Option A):

* Project roles (e.g., Administrator, Developer) are used within a project's permission scheme to grant project-specific permissions, such as Administer Projects or Browse Projects. They do not control the ability to create new projects, which is a system-level action.

* Extract from Documentation:

Project roles are used in permission schemes to grant permissions within a specific project. They do not apply to global actions like creating projects.

(Source: Atlassian Support Documentation, "Manage project roles")

* Product access (Option B):

* Product access determines whether a user can use Jira Software or other Atlassian products.

While George needs product access to use Jira, this does not grant the specific ability to create projects.

* Extract from Documentation:

Product access allows users to log in and use Jira products. Specific actions, like creating projects, require global or project permissions.

(Source: Atlassian Support Documentation, "Manage product access")

* Project permission (Option C):

* Project permissions (e.g., Administer Projects, Browse Projects) are defined in a project's permission scheme and apply to actions within a specific project. Creating a project is a global action, not tied to any existing project's permission scheme.

* Extract from Documentation:

Project permissions control actions within a project, such as editing issues or managing components. Global permissions control system-wide actions like creating projects.

(Source: Atlassian Support Documentation, "Manage project permissions")

* Product role (Option E):

* Product roles (e.g., Jira Software User, Jira Service Management Agent) define access to specific Atlassian products but do not grant permissions for actions like creating projects.

This is not relevant to the requirement.

* Extract from Documentation:

Product roles determine access to Atlassian products and are not related to specific permissions like creating projects.

(Source: Atlassian Support Documentation, "Manage product roles")

* Additional Notes:

* The Create Projects permission can be granted to George via a group or directly to his user account in Settings > System > Global permissions.

* As a project lead, George likely already has project-level permissions (e.g., Administer Projects for his projects), but these do not extend to creating new projects.

問題 #36

You have just deployed a new Support Workflow and Support Notification Scheme. Manager Maria should be receiving notifications when users click the Escalate workflow transition, but she is not.

Identify two possible reasons Maria is not receiving the notifications. (Choose two.)

- A. The Escalate workflow transition is firing the wrong event.
- B. Maria is not listed in the Issue Escalated (System) event of the Support Notification Scheme.
- C. Maria is not listed in the right custom event of the Support Notification Scheme.
- **D. The Escalate workflow transition is firing the right event but uses the wrong email template.**
- E. The Escalate workflow transition is firing the right event, but the event is marked Inactive.
- **F. The right custom event has been deleted from the Support Notification Scheme.**

答案： D,F

問題 #37

.....

我們都知道在現在這個競爭激烈的IT行業，擁有一些IT相關認證證書是很有必要的。IT認證證書是對你的IT專業知識和經驗的最好證明。在IT行業中ATLASSIAN ACP-120 認證考試是一個很重要的認證考試，但是通過ATLASSIAN ACP-120 認證考試是有一定難度的。但是為了能讓工作職位有所提升花點金錢選擇一個好的培訓機構來幫助你通過考試是值得的。VCESoft擁有最新的針對ATLASSIAN ACP-120認證考試的培訓資料，與真實的考試很95%相似性。如果你使用VCESoft提供的培訓，你可以100%通過考試。如果你考試失敗，我們會全額退款。
