Es ist nicht so einfach, die Order-Management-Administrator Prüfung zu bestehen. Order-Management-Administrator Prüfung erfordert ein hohes Maß an Fachwissen der IT. Wenn es Ihnen dieses Wissen fehlt, kann Fast2test Ihnen die Kenntnissequellen zur Verfügung stehen. Mit ihren reichen Fachkenntnissen und Erfahrungen bietet der Expertenteam die relevanten Fragen und Antworten der Order-Management-Administrator Zertifizierungsprüfung. Wenn Sie Fast2test wählen, versprechen wir Ihnen nicht nur eine 100%-Pass-Garantie, sondern stellt Ihnen auch einen einjährigen kostenlosen Update-Service zur Verfügung. Falls Sie in der Prüfung durchfallen, zahlen wir Ihnen die gesamte Summe zurück.

Salesforce Order-Management-Administrator Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Process Automation and Integrations: This section helps the Salesforce Order Management Administrator Consultant demonstrate the capability to deliver business value by integrating Order Management with external systems using clicks rather than code. Mastery of navigation within Order Management processes, connecting nodes, and integrating systems efficiently ensures understanding of how to implement effective solutions.

Thema 2	• Deployment and Debugging: In this area, aspiring order management administrator consultant demonstrates a deep understanding of deployment options, life cycles, and the configuration of supporting objects. This includes creating processes from scratch, leveraging pre-set data, and validating results in runtime scenarios.
Thema 3	• Data Model: This topic equips the Salesforce Order Management Administrator Consultant to showcase knowledge of critical objects such as Order, Order Summary, Fulfillment Orders, and Return Orders. It involves establishing and tracing integrations with B2C Commerce or other systems, including custom attributes. Proficiency here is pivotal for ensuring seamless data flow and robust Order Management operations within complex business environments.
Thema 4	• Order Management Basics: In this topic, the Salesforce Order Management Administrator Consultant learns to position Order Management effectively within Salesforce's core architecture. By articulating the extensible platform capabilities, the ability to integrate with third-party systems, and the overall value proposition, this knowledge helps highlight Order Management's seamless adaptability and efficiency. These insights are crucial for demonstrating business value during client engagements.

Mit Hilfe der Salesforce Order-Management-Administrator Prüfungsunterlagen können Sie wirklich die Erhöhung Ihrer Fähigkeit empfinden. Sie können auch das echte Zertifikat der Salesforce Order-Management-Administrator erwerben!

Salesforce Order Management Administrator Accredited Professional Order-Management-Administrator Prüfungsfragen mit Lösungen (Q34- Q39):

34. Frage

Which two objects are found within Order Management?

- A. Cart
- **B. Payment Summary**
- **C. Fulfillment Order**
- D. Receipt
- E. Packing Manifest

Antwort: B,C

Begründung:

Explanation

Two objects that are found within Order Management are:

Fulfillment Order. A Fulfillment Order is a record that represents a group of products in an order that are fulfilled together from the same location. A Fulfillment Order has a lookup relationship to the Order Summary object, and it contains information such as the fulfillment location, delivery method, status, etc.

Payment Summary. A Payment Summary is a record that represents a payment made for an order or part of an order. A Payment Summary has a lookup relationship to both Order Summary and Invoice objects, and it contains information such as the payment amount, method, status, etc.

35. Frage

Which three steps should an administrator take to set up a mock payment gateway in a new org?

- A. Create a Payment Gateway
- B. Create a Named Credential
- C. Create a Payment Provider
- D. Create a CORS (Cross-Origin Resource Sharing) entry
- E. Create a Trusted Site Entry

Antwort: A,B,C

Begründung:

To set up a mock payment gateway in a new org, an administrator should take the following steps:

Create a Payment Provider: This is a custom metadata type that defines the configuration and behavior of a payment gateway. A payment provider specifies the name, type, class, and endpoint of the payment gateway.

Create a Named Credential: This is a Salesforce feature that securely stores authentication information for connecting to external services. A named credential specifies the URL, identity type, authentication protocol, and certificate of the payment gateway.

Create a Payment Gateway: This is a custom object that represents an instance of a payment provider. A payment gateway references a payment provider and a named credential, and defines additional settings such as currency, mode, and timeout.

36. Frage

Where can an administrator find the Billing Customer Name as it relates to an Order Summary?

- A. Order Summary Lookup (Contact) BillToContactId
- B. Order Summary Lookup (Account) Contact.BillToAccountId
- C. Order Summary Lookup (Payment) Billing Name
- D. Order Summary Lookup (Account) BillToAccountId

Antwort: A

37. Frage

Which object is used to create an invoice?

- A. Order
- B. Fulfillment Order
- C. Order Summary
- D. Shipment

Antwort: C

Begründung:

The Order Summary object is used to create an invoice. An invoice is a document that requests payment from a customer for an order. An invoice can include one or more fulfillment orders and one or more credit memos. A fulfillment order is a record that represents a part of an order that is fulfilled by a specific location. A credit memo is a record that represents a partial or full refund for an order or a fulfillment order. To create an invoice, an administrator can use the Create Invoice Apex action in a flow. The Create Invoice Apex action requires the Order Summary ID as an input parameter and creates an Invoice record associated with the Order Summary record. Reference: Order Management Objects, [Create Invoice Apex Action]

38. Frage

An administrator is encountering errors when reusing a composite API call to load test orders via the Workbench. What are three possible causes of this issue?

- A. The administrator has duplicate Product SKUs in the JSON query

- B. The number of subrequests in the JSON query exceeds the 20 subrequest limit
- C. Record IDs used within the request are incorrect
- D. The administrator is creating multiple objects in a single JSON query
- E. The Administrator has logged into the wrong environment in Workbench

Antwort: A,B,C

Begründung:

Explanation

Three possible causes of this issue are:

The administrator has duplicate Product SKUs in the JSON query. A Product SKU is a unique identifier for a product that is used to track inventory and sales. A Product SKU must be unique within an org, and it cannot be duplicated in a composite API call. If the administrator has duplicate Product SKUs in the JSON query, it will cause an error when loading test orders via the Workbench.

The number of subrequests in the JSON query exceeds the 20 subrequest limit. A subrequest is a single HTTP request that is part of a composite API call. A composite API call can contain up to 20 subrequests in a single JSON body. If the administrator has more than 20 subrequests in the JSON query, it will cause an error when loading test orders via the Workbench.

Record IDs used within the request are incorrect. A record ID is a unique identifier for a record that is used to reference and manipulate data in Salesforce. A record ID must be valid and exist in the org, and it must match the data type and format of the corresponding field. If the administrator has incorrect record IDs in the JSON query, such as using 15-character IDs instead of 18-character IDs, or using IDs from a different org, it will cause an error when loading test orders via the Workbench.
