What's more, part of that Lead1Pass NCP-EUC dumps now are free: [https://drive.google.com/open?id=1T4b6\\_W3YG7qOHD8KBduAeJyJlglmlErbB](https://drive.google.com/open?id=1T4b6_W3YG7qOHD8KBduAeJyJlglmlErbB)

Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable NCP-EUC study materials for all customers. More importantly, it is evident to all that the NCP-EUC Study Materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market.

Nutanix NCP-EUC certification is an important credential for IT professionals who specialize in end-user computing. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification demonstrates the candidate's ability to design, implement, and manage Nutanix-powered VDI and EMM solutions, making them highly valuable to employers. With the right preparation and study, IT professionals can successfully pass the Nutanix NCP-EUC Exam and advance their careers in end-user computing.

## **NCP-EUC Dumps Discount, NCP-EUC Practice Exams Free**

If you find any quality problems of our NCP-EUC or you do not pass the exam, we will unconditionally full refund. Lead1Pass is professional site that providing Nutanix NCP-EUC Questions and answers, it covers almost the NCP-EUC full knowledge points.

## **Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q101-Q106):**

### **NEW QUESTION # 101**

Which scenario represents the best case for how an organization would deploy non-persistent desktops to their employee and customer base?

- **A. Registration kiosks at a conference**
- B. High end developers
- C. Private equity traders

- D. Application Quality Assurance Testing

**Answer: A**

Explanation:

This is because registration kiosks are used by multiple customers who do not need to personalize their desktops or applications, and who only need to perform a specific task such as registering or checking in.

Non-persistent desktops can provide a secure and consistent user experience for these customers, and also reduce management overhead for the organization.

#### NEW QUESTION # 102

An organization recently deployed an Active-passive VDI solution across multiple sites within their Nutanix platforms. The Organization is now on phase two of the project, which requires them to consolidate all user profile and home data, since each location will have its own standalone Microsoft File Server.

Which solution will provide a more easily-managed environment for profile and Home Share data that includes High Availability and a unified single namespace?

- A. Nutanix Storage Containers
- **B. Nutanix Files**
- C. Microsoft DFS
- D. Microsoft FSLogix

**Answer: B**

Explanation:

Nutanix Files is a software-defined, scale-out file storage solution that provides a repository for unstructured data, such as home directories, user profiles, departmental shares, applicationlogs, backups, and archives1

. Nutanix Files also provides high availability and a unified single namespace for easy management2.

#### NEW QUESTION # 103

An administrator has configured a VM with passthrough GPU to allow direct access to GPU resources. After an AHV host failure, the VM fails to power up on another host.

What would cause this behavior?

- **A. Insufficient GPU resources are available**
- B. GPU-enabled VMs are not HA-capable
- C. NVIDIA license server is not reachable
- D. GPU-enabled VMs must be live-migrated

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Nutanix AHV Administration Guide regarding GPU Pass-Through:

\* Hardware Binding: GPU Pass-Through (DirectPath I/O) binds a virtual machine to a specific physical PCIe device on the host. Unlike vGPU (which abstracts the hardware), passthrough creates a 1:1 dependency.

\* HA Behavior: Nutanix AHV supports High Availability (HA) for GPU-enabled VMs in the sense that if a host fails, the system attempts to restart the VM on another host (Cold Migration). Option C ("Not HA-capable") is incorrect because the system attempts the restart; it does not simply abandon the VM by design.

\* Failure Cause: The restart fails (the "behavior" described) because the destination host must have the exact same GPU hardware resource available (free and matching the profile/addressing). If the other nodes in the cluster do not have a free GPU of the same type, or if they are already fully utilized, the VM cannot power on, resulting in the "Insufficient GPU resources" error.

#### NEW QUESTION # 104

An administrator has an ESXi-based Nutanix cluster exclusively using T4-2Q profile types. When attempting to power on virtual desktops with a T4-4Q profile, the operation fails.

The administrator has noted that the physical GPUs across the cluster show low usage with only one 2Q desktop per GPU per host, with plenty of spare frame buffer memory available. The administrator wants to maximize the number of users on a single card and

allow 4Q and 2Q profiles to co-exist. The administrator acknowledges the lower performance that may occur. How can the administrator accomplish this task?

- A. Remove some physical GPUs.
- **B. Change to Depth Mode.**
- C. Add more RAM to the hosts.
- D. Change to Breadth mode.

**Answer: B**

Explanation:

This issue is caused by the NVIDIA vGPU scheduling policy. On many NVIDIA GRID/vGPU architectures (prior to latest MIG capabilities), you cannot mix different vGPU profile sizes (e.g., 2Q and 4Q) on the same physical GPU.

\* Current State (Breadth Mode): The scheduler is likely distributing the "2Q" VMs evenly across all available GPUs. This means every physical GPU has at least one "2Q" profile active, "tainting" the GPU so it can only accept other "2Q" VMs.

\* The Fix (Depth Mode): By changing the allocation policy to Depth-First, the scheduler will fill up the first physical GPU with "2Q" VMs until it is full before moving to the next. This consolidates the "2Q" workloads onto fewer cards, leaving other physical GPUs completely empty. These empty GPUs can then accept the "4Q" profile type, allowing both profiles to co-exist on the same host (though on different physical cards).

### NEW QUESTION # 105

A new EUC environment is being designed for graphics-intensive workloads. An administrator has determined that L40S GPUs (48 GB) with L40S-12Q (12 GB) profiles will be needed. The administrator chooses an NX-9151-G9, which can fit four L40S GPUs. How many virtual desktops per server can be estimated based on the GPU requirements?

- A. 0
- B. 1
- C. 2
- **D. 3**

**Answer: D**

Explanation:

To calculate the estimated number of virtual desktops per server, one must consider the physical memory of the GPU, the memory required by the selected vGPU profile, and the number of GPUs installed in the node.

\* GPU Specifications: The NVIDIA L40S GPU is equipped with 48 GB of physical GDDR6 memory.

\* Profile Requirements: The L40S-12Q profile allocates 12 GB of frame buffer memory to each virtual desktop.

\* Density Calculation per GPU: Dividing the total physical memory by the profile memory (48 GB / 12 GB) results in 4 virtual desktops supported per single GPU card.

\* Server Capacity: The Nutanix NX-9151-G9 platform supports up to four NVIDIA L40S GPUs per node.

\* Total Estimate: Multiplying the desktops per GPU by the number of GPUs (4 desktops x 4 GPUs) yields a total of 16 virtual desktops per server.

### NEW QUESTION # 106

.....

If you suffer from procrastination and cannot make full use of your sporadic time during your learning process, it is an ideal way to choose our NCP-EUC training dumps. We can guarantee that you are able not only to enjoy the pleasure of study but also obtain your NCP-EUC Certification successfully, which can be seen as killing two birds with one stone. And you will be surprised to find our superiorities of our NCP-EUC exam questions than the other vendors'.
