SAP E-S4CPE-2405 Valid Exam Blueprint - Valid E-S4CPE-2405 Exam Discount

With the development of technology, our E-S4CPE-2405 training engine will be updated regularly. Actually, we never stop researching the new functions of the study materials. Normally, we will release our new version of the E-S4CPE-2405 exam simulation on our website once it passed the tests. Many details will be perfected in the new version of our E-S4CPE-2405 Study Materials not not on the content, but also on the displays. And we have been in this career for over ten years, our E-S4CPE-2405

learning guide is perfect.

SAP E-S4CPE-2405 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implementing with a Cloud Mindset, Building the Team, and Conducting Fit-to-Standard Workshops: This section of the exam measures skills of project managers and emphasizes the importance of adopting a cloud-first approach when implementing SAP solutions. It also includes building the right implementation team and running fit-to-standard workshops to align system configuration with best practices and standard business processes.
Topic 2	• System Landscapes and Identity Access Management: This section of the exam measures skills of system administrators and focuses on designing and managing SAP system landscapes while ensuring secure and efficient identity access management. It includes concepts related to system environments, user authentication, and authorization controls.
Topic 3	• Extensibility, Integration, and Clean Core: This section of the exam measures skills of integration specialists and involves understanding the principles of extending SAP functionality without compromising the clean core approach. It includes integrating SAP with other systems, maintaining system integrity, and ensuring sustainable customizations.
Topic 4	• Configuration and the SAP Fiori Launchpad: This section of the exam measures skills of application consultants and covers configuring SAP solutions to meet business needs, along with setting up and managing the SAP Fiori Launchpad. It also touches on customizing the user interface for an optimal and user-friendly experience.

SAP Certified Specialist - Implementation Consultant - SAP S/4HANA Cloud Private Edition Sample Questions (Q60-Q65):

NEW QUESTION # 60
After integration requirements have been finalized, what is used to analyze, design, and document the integration strategy?

- A. SAP Cloud ALM Requirements app
- B. Integration and API List
- C. SAP Integration Solution Advisory Methodology
- D. SAP Business Accelerator Hub

Answer: C

Explanation:
After finalizing integration requirements, theSAP Integration Solution Advisory Methodology (ISA-M)is utilized to analyze, design, and document the integration strategy. ISA-M provides a structured approach to developing integration guidelines and best practices tailored to the organization's needs.
Option A: SAP Cloud ALM Requirements app
This option is incorrect. The Requirements app in SAP Cloud ALM is used for managing project requirements but does not specifically focus on integration strategy design.
Option B: Integration and API List
This option is incorrect. The Integration and API List provides information on available integrations and APIs but does not offer a methodology for designing integration strategies.
Option D: SAP Business Accelerator Hub
This option is incorrect. SAP Business Accelerator Hub is a repository for APIs and integration content but does not provide tools for analyzing or designing integration strategies.
In summary, theSAP Integration Solution Advisory Methodologyis the appropriate framework for analyzing, designing, and documenting integration strategies after requirements have been finalized.

NEW QUESTION # 61

Which solution is designed to help customers understand their environmental, social, and governance (ESG) data?

- A. SAP Sustainability Control Tower
- B. SAP Responsible Design and Production
- C. SAP Sustainability Footprint Management
- D. SAP Green Token

Answer: A

Explanation:
SAP offers several solutions under its sustainability portfolio to address environmental, social, and governance (ESG) needs. The question asks for the solution designed to help customers understand their ESG data, implying a focus on visibility, reporting, and insights. Let's analyze the options:
* A. SAP Sustainability Control Tower: This is the correct answer. SAP Sustainability Control Tower is a cloud-based solution designed to provide a centralized platform for managing, monitoring, and reporting ESG data. It helps organizations understand their sustainability performance by offering dashboards, KPIs, and analytics to track metrics like carbon emissions, diversity, and governance compliance. It integrates with SAP S/4HANA (including Private Edition) and other systems to provide actionable insights, making it the primary tool for ESG understanding as per SAP's sustainability strategy.
* B. SAP Green Token: This solution focuses on tracking the sustainability attributes of products across supply chains (e.g., carbon footprint of materials) using blockchain technology. While it supports ESG goals, it is more operational and specific to supply chain transparency rather than providing a broad understanding of ESG data. Thus, it is not the best fit here.
* C. SAP Sustainability Footprint Management: This tool calculates and manages product-level carbon footprints and environmental impacts, integrating with SAP S/4HANA. It is more focused on measurement and operational management of environmental data rather than providing a holistic understanding of ESG data across the organization. Hence, it is incorrect in this context.
* D. SAP Responsible Design and Production: This solution helps companies design sustainable products and manage extended producer responsibility (e.g., plastic taxes). It is operational and industry-specific, not a broad ESG data understanding tool, making it an incorrect choice.
In conclusion, SAP Sustainability Control Tower is the solution designed to help customers understand their ESG data through comprehensive visibility and reporting.

NEW QUESTION # 62
Where is the initial list of known integrations documented?

- A. In the Business Driven Configuration Ques-tionnaire
- B. In SAP Cloud ALM
- C. In the SAP Integration Solution Advisory Methodology
- D. In the Digital Discovery Assessment

Answer: D

NEW QUESTION # 63
When do you use the SAP Fiori app "Launchpad App Manager?" Note: There are 2 correct answers to this question.

- A. To manage business catalogs with references to SAP Fiori app tiles in technical catalogs
- B. To view where launchpad content is used
- C. To maintain technical catalogs
- D. To create custom catalogs

Answer: C,D

Explanation:
The "Launchpad App Manager" Fiori app in SAP S/4HANA Cloud Private Edition is used to manage Fiori Launchpad content, such as catalogs and tiles. Let's evaluate its uses:
* A. To create custom catalogs: This is correct. The Launchpad App Manager allows administrators to create custom catalogs, grouping Fiori app tiles for specific roles or purposes, enhancing user access in the Launchpad.

* B. To manage business catalogs with references to SAP Fiori app tiles in technical catalogs: This is incorrect. Business catalogs are managed via the "Maintain Business Roles" app, not the Launchpad App Manager. The latter focuses on technical and custom catalogs, not business catalog references.
* C. To maintain technical catalogs: This is correct. The app is used to maintain technical catalogs, which contain references to Fiori apps and their configurations (e.g., OData services). These catalogs are then linked to business roles.
* D. To view where launchpad content is used: This is incorrect. Viewing usage of Launchpad content (e.g., where tiles are assigned) is handled by tools like the "Launchpad Content Manager" or role analysis, not the Launchpad App Manager's primary function.
In summary, the Launchpad App Manager is used forA(To create custom catalogs) andC(To maintain technical catalogs).

NEW QUESTION # 64
Through which tools can you launch the Cloud Integration Automation service? Note: There are 2 correct answers to this question.

* A. SAP Cloud ALM
* B. SAP for Me
* C. SAP Solution Manager
* D. SAP Business Accelerator Hub

Answer: A,B

Explanation:
The Cloud Integration Automation service facilitates the integration of SAP cloud solutions. It can be launched through the following tools:
Option A: SAP for Me
This option is correct. SAP for Me is a customer portal that provides access to various SAP services, including the Cloud Integration Automation service.
Option B: SAP Solution Manager
This option is incorrect. SAP Solution Manager is primarily used for application lifecycle management and does not directly launch the Cloud Integration Automation service.
Option C: SAP Business Accelerator Hub
This option is incorrect. SAP Business Accelerator Hub is a repository for APIs and does not provide access to the Cloud Integration Automation service.
Option D: SAP Cloud ALM
This option is correct. SAP Cloud ALM is an application lifecycle management tool for cloud solutions and provides access to the Cloud Integration Automation service.
In summary, the Cloud Integration Automation service can be launched throughSAP for Meand **

NEW QUESTION # 65
