Free Valid Oracle 1Z1-771 Questions Updates and Free Demos

2026 Latest TroytecDumps 1Z1-771 PDF Dumps and 1Z1-771 Exam Engine Free Share: https://drive.google.com/open?id=1uzaHaD1hjwm_LNKKcb-hnrDiVByny3GC

We really take the requirements of our worthy customers into account. Perhaps you know nothing about our 1Z1-771 study guide. Our free demos of our 1Z1-771 learning questions will help you know our study materials comprehensively. As we have three different kinds of the 1Z1-771 Practice Braindumps, accordingly we have three kinds of the free demos as well. They are a small part of the questions and answers of the 1Z1-771 learning quiz.

We provide you with our best Oracle 1Z1-771 exam study material, which builds your ability to get high-paying jobs. Oracle 1Z1-771 Exam Dumps includes Oracle 1Z1-771 Dumps PDF format, desktop 1Z1-771 practice exam software, and web-based 1Z1-771 practice test software.

Pass Guaranteed Quiz 2026 1Z1-771: Oracle APEX Cloud Developer Professional – The Best Valid Braindumps Files

Oracle Certified professionals are often more sought after than their non-certified counterparts and are more likely to earn higher salaries and promotions. Moreover, cracking the Oracle APEX Cloud Developer Professional (1Z1-771) exam helps to ensure that you stay up to date with the latest trends and developments in the industry, making you more valuable assets to your organization.

Oracle 1Z1-771 Exam Syllabus Topics:

Topic	Details
Topic 1	• Implementing Navigation in Your Application: This section assesses the skills of UX Designers in designing smooth application navigation. It includes configuring shared components, setting up search functionalities, and enhancing user experience with intuitive navigation structures.

Topic 2	• Extending Application Capabilities: This section measures the skills of APEX Developers in enhancing application functionality. It includes sending automated emails, implementing plug-ins, and utilizing automation features to improve efficiency and extend capabilities.
Topic 3	• Using Themes and Theme Styles: This section tests the abilities of UI Designers in applying visual themes to applications. It involves selecting and customizing themes, using Theme Roller for design adjustments, and creating template components for consistent branding.
Topic 4	• Creating and Using Forms: This section evaluates the proficiency of Form Developers in designing user-friendly forms. It covers creating interactive grids, developing simple forms linked to reports, and implementing master-detail forms for effective data management.
Topic 5	• Managing Pages and Regions: This section measures the knowledge of UI Designers in structuring application layouts. It covers creating different types of pages and regions, managing page components within Page Designer, and ensuring an optimized user interface for applications.
Topic 6	• Adding Additional Pages to Your Application: This section assesses the skills of Application Developers in expanding application functionalities. It involves creating Oracle JET charts, calendars, trees, and maps to enhance data visualization and user interaction.
Topic 7	• Leveraging Generative AI in Oracle APEX: This section tests the knowledge of AI Developers in integrating AI-powered features within APEX applications. It involves using APEX Assistant for code generation, creating AI-driven data models, and implementing AI-powered text generation using dynamic actions.
Topic 8	• Developing Reports: This section assesses the skills of Report Developers in creating interactive reports and dashboards. It involves customizing reports, working with faceted search pages, integrating smart filters, and designing visually appealing data presentations using Oracle APEX.
Topic 9	• Adding Computations, Processes, Validations, and Branches: This section measures the knowledge of Backend Developers in implementing application logic. It focuses on configuring computations, processes, validations, and page branches to automate workflows and ensure data integrity.
Topic 10	• Creating Application Page Controls: This section tests the abilities of Frontend Developers in implementing interactive page elements. It includes creating page-level items, buttons, and controls that enhance navigation and user interaction within APEX applications.
Topic 11	• Creating an APEX Application: This section tests the abilities of Application Developers in building APEX applications. It focuses on creating applications from existing tables and external files, providing a fundamental understanding of the App Builder tool and its role in application development.
Topic 12	• Implementing Security in Your Application: This section evaluates the knowledge of Security Specialists in securing APEX applications. It covers authentication schemes, authorization controls, and session state protection to ensure application security and user access management.
Topic 13	• Managing Workflows and Tasks: This section evaluates the proficiency of Process Automation Specialists in workflow management. It covers customizing workflows, using approval processes, and handling unified task lists to streamline business processes within applications.

Oracle APEX Cloud Developer Professional Sample Questions (Q43-Q48):

NEW QUESTION # 43
At what level does a developer enable push notifications so that end users can receive them on their devices from an APEX application?

- A. Instance
- B. Page
- C. Application

- D. Region

Answer: C

Explanation:
Push notifications in Oracle APEX are enabled at the application level. This allows the application to register with the Progressive Web App (PWA) framework and manage subscriptions for all end users. Once enabled in the Application Definition under "Progressive Web App" settings, APEX handles the subscription process, and developers can use APIs like APEX_PWA.SEND to send notifications. Enabling at the region, page, or instance level is not supported for this feature.

NEW QUESTION # 44
Which search type in keywords do they represent in Oracle Text?

- A. List
- B. Oracle Text
- C. Standard

Answer: B

Explanation:
In Oracle APEX, when configuring search functionality (e.g., in reports or faceted search), "Oracle Text" refers to a specific search type leveraging the Oracle Text engine. This is a powerful full-text search capability built into Oracle Database, supporting keyword-based searches, fuzzy matching, and indexing.
Standard: A basic SQL-based search (e.g., LIKE), not tied to Oracle Text.
List: Not a search type; it might refer to a UI component or LOV, not a search mechanism.
Oracle Text: Explicitly uses the CONTAINS operator and text indexes (e.g., CONTEXT or CTXCAT) for advanced search features, ideal for large datasets or complex queries.
This choice impacts performance and accuracy, especially in text-heavy applications.

NEW QUESTION # 45
Which two tasks can be performed by the APEX Assistant when you create an application using the "Create App using Generative AI" option?

- A. Add a Dashboard page.
- B. Update the App icon with a custom image.
- C. Create the application blueprint.
- D. Create a Generative AI service.

Answer: A,C

Explanation:
The "Create App using Generative AI" feature in APEX Assistant leverages natural language processing to automate application creation. When invoked:
Create the application blueprint: APEX Assistant generates a foundational structure (blueprint) for the application, including pages, regions, and navigation, based on the user's natural language input (e.g., "Create an app to manage employees"). This blueprint serves as the starting point, which developers can refine.
Add a Dashboard page: The Assistant can interpret requests for specific page types, such as dashboards, and include them in the generated app. Dashboards typically feature charts, summaries, or key metrics, and this is a common task supported by the AI-driven creation process.
Create a Generative AI service: This is not a task performed during app creation; instead, it's a prerequisite configuration step done separately in the Instance Administration settings.
Update the App icon: While app icons can be customized manually post-creation, this is not an automated task performed by APEX Assistant during the generative process.
This feature streamlines development by interpreting intent and building functional components, saving significant time compared to manual creation.

NEW QUESTION # 46
What happens when you regenerate credentials for Push Notifications in Oracle APEX?

- A. Push Notifications will be disabled for the application.
- B. Existing Push Subscriptions for the application will be invalidated.
- C. A new notification server must be created.

Answer: B

Explanation:
Regenerating Push Notification credentials updates the VAPID keys (public/private pair) in the PWA settings:
A . Existing Push Subscriptions invalidated: Subscriptions (in APEX_APPL_PUSH_SUBSCRIPTIONS) are tied to the old keys. New keys break this link, requiring users to re-subscribe (e.g., via browser prompts), as the push service (e.g., Firebase) can't authenticate old subscriptions.
B . New notification server: False; the server configuration remains; only credentials change.
C . Disabled for the app: False; notifications remain enabled but won't work for old subscriptions until re-established.
Technical Insight: Regeneration updates APEX_PWA_VAPID_PUBLIC_KEY and APEX_PWA_VAPID_PRIVATE_KEY, triggering a subscription refresh cycle.
Use Case: Security breach requires key rotation.
Pitfall: Users must re-opt-in, potentially losing some subscribers.

NEW QUESTION # 47
You have defined a REST Data Source with ORDS as the REST Data Source Type. The Source is being used as source for an editable Interactive Grid. When a user updates an employee record in this Interactive Grid, which operation is performed on the Database?

- A. GET
- B. PUT
- C. POST

Answer: B

Explanation:
An editable Interactive Grid synced with a REST Data Source (ORDS) maps CRUD operations to HTTP methods:
C . PUT: Updates an existing resource. When a user edits a row (e.g., changes SALARY), the grid sends a PUT request to the ORDS endpoint (e.g., /employees/101), updating the corresponding record.
A . POST: Creates new records, used for inserts, not updates.
B . GET: Retrieves data, used for initial grid population, not updates.
Technical note: ORDS maps PUT to an update operation on the underlying table, requiring the REST endpoint to support this method.
