Answer: A,B,E

Explanation:
Transportation Management Overview and Fundamentals

NEW QUESTION # 33
You want to differentiate transportation requirement types in a newly installed SAP TM system based on SAP ERP document types.
What do you need to create in SAP TM?
There are 2 correct answers to this question.

- A. A condition based on /SCMTMS/TOR_TYPE
- B. A condition based on /SCMTMS/FUBR
- C. A condition based on /SCMTMS/DTR_TYPE
- D. A condition based on /SCMTMS/OTR_TYPE

Answer: A,D

NEW QUESTION # 34
You want to avoid dependency on a single carrier. Which object should you define to balance the load across multiple carriers?

- A. Transportation allocation
- B. Condition
- C. Business share
- D. Incompatibility

Answer: C

Explanation:
In SAP S/4HANA Transportation Management, business shares are used to distribute transportation volumes across multiple carriers to avoid dependency on a single carrier. According to the SAP documentation, business shares define the percentage of transportation volume allocated to each carrier, ensuring load balancing based on predefined agreements. This is typically configured in the SAP Fiori app "Create Business Share" and used during carrier selection to distribute freight orders equitably.
The other options are incorrect:
* Transportation allocation (B) defines capacity limits for specific lanes or means of transport but does not focus on balancing loads across carriers.
* Incompatibility (C) is used to define restrictions, such as preventing certain products or carriers from being combined, not for load balancing.
* Condition (D) is used for rule-based determinations (e.g., selecting a freight agreement), not for carrier load balancing.
