What is more, you will learn all knowledge systematically and logically, which can help you memorize better.

CompTIA Linux+ Certification Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

An administrator must secure an account for a user who is going on extended leave. Which of the following steps should the administrator take? (Choose two).

- A. Run the command `passwd -l user`.
- B. Change the date on the `/home` folder to that of the expected return date.
- C. Delete the user's `/home` folder.
- D. Set the user's files to immutable.
- E. Change the user's shell to `/sbin/nologin`.
- F. Instruct the user to log in once per week.

Answer: A,E

Explanation:

passwd -l user locks the user's account by disabling the password, preventing logins.

Change the user's shell to /sbin/nologin ensures the account cannot be used for interactive logins, further securing it.

NEW QUESTION # 48

An administrator receives reports that a web service is not responding. The administrator reviews the following outputs:

```
echo %PWD
/etc/pki/nginx

ls -lRt
:
total 8
-rwxr-xr-x. 2 root root 6 Jul 10 10:57 private
-rw-r--r--. 1 root root 895 Jul 10 10:56 server.crt
-rw-r--r--. 1 root root 227 Jul 10 10:56 server.key
/private:
total 0

sudo systemctl status nginx
nginx.service - The nginx HTTP and reverse proxy server
   Loaded: loaded (/usr/lib/systemd/system/nginx.service; disabled; preset: disabled)
   Active: failed (Result: exit-code) since Wed 2023-11-01 06:56:51 EDT; 6s ago
   Process: 110551 ExecStartPre=/usr/bin/rm -f /run/nginx.pid (code=exited, status=0/SUCCESS)
   Process: 110552 ExecStartPre=/usr/sbin/nginx -t (code=exited, status=1/FAILURE)
   CPU: 144ms

ov 01 06:56:51 webserver systemd[1]: Starting nginx.service - The nginx HTTP and reverse proxy server...
ov 01 06:56:51 webserver nginx[110552]: nginx: [emerg] cannot load certificate key "/etc/pki/nginx/private/server.key": BIO_new_file() failed (SSL: error:80000002:system
library:No such file or directory:call1>
ov 01 06:56:51 webserver nginx[110552]: nginx: configuration file /etc/nginx/nginx.conf test failed
ov 01 06:56:51 webserver systemd[1]: nginx.service: Control process exited, code=exited, status=1/FAILURE
ov 01 06:56:51 webserver systemd[1]: nginx.service: Failed with result 'exit-code'.
ov 01 06:56:51 webserver systemd[1]: Failed to start nginx.service - The nginx HTTP and reverse proxy server.
```

Which of the following is the reason the web service is not responding?

- A. The private key needs to be renamed from server.crtto server.keyso the service can find it.
- **B. The private key is not in the correct location and needs to be moved to the correct directory.**
- C. The private key has the incorrect permissions and should be changed to 0755for the service.
- D. The private key does not match the public key, and both keys should be replaced.

Answer: B

Explanation:

The error log shows "cannot load certificate key /etc/pki/nginx/private/server.key", but the listing reveals that server.key is located in /etc/pki/nginx/ rather than the expected /etc/pki/nginx/private/ directory. Since the file exists but not where Nginx is configured to look, moving it to the correct directory resolves the issue.

NEW QUESTION # 49

A systems administrator needs to write a script that counts the number of times "FAIL" appears in a log file. If "FAIL" appears zero times, then the administrator would like to print the message

"SUCCESS." Given the following:

```
if [ $(grep -c FAIL /var/file.log) ____ 0 ]
then
    echo SUCCESS
else
    echo FAIL
fi
```

Which of the following should be used before the zero to complete the script?

- A. -gt
- B. -ne
- C. -lt
- **D. -eq**

Answer: D

Explanation:

The test should check if the count of "FAIL" equals zero. The operator -eq is used for numeric equality in shell conditionals, so [\$(grep -c FAIL /var/file.log) -eq 0] correctly evaluates whether the count is zero.

NEW QUESTION # 50

A systems administrator wants to prevent the current contents of a file from being overwritten and wants to allow new additions at the end of the file. Which of the following commands should the administrator use?

- A. setfacl -m m:r file
- B. setenforce file
- C. chmod +t file
- D. **chattr +a file**

Answer: D

Explanation:

The chattr +a command sets the append-only attribute on a file. This prevents overwriting or deletion of existing contents, while still allowing new data to be appended to the end of the file.

NEW QUESTION # 51

A systems administrator manages multiple Linux servers and needs to set up a reliable and secure way to handle the complexity of managing event records on the OS and application levels.

Which of the following should the administrator do?

- A. Create an automated process to retrieve logs from the server by demand.
- B. Configure daily automatic backups of logs to remote storage.
- C. **Implement a centralized log aggregation solution.**
- D. Deploy log rotation procedures to manage the records.

Answer: C

Explanation:

A centralized log aggregation solution (such as Elasticsearch, Graylog, or Splunk) provides reliable and secure management of logs across multiple servers. It consolidates OS and application logs, simplifies analysis, and improves monitoring and security compared to on-demand retrieval, backups, or simple log rotation.

NEW QUESTION # 52

.....

Our company will provide first class service on XK0-006 exam questions for our customers. As a worldwide leader in offering the best XK0-006 exam guide, we are committed to providing comprehensive service to the majority of consumers and strive for constructing an integrated service. What's more, we have achieved breakthroughs in XK0-006 Study Materials application as well as interactive sharing and after-sales service. As long as you need help, we will offer instant support to deal with any of your problems about our XK0-006 exam questions
