

Why Should You Start Preparation With ValidExam 6V0-22.25 Exam Dumps?

Highlight a person's learning effect is not enough, because it is difficult to grasp the difficulty of testing, a person cannot be effective information feedback, in order to solve this problem, our 6V0-22.25 study materials provide a powerful platform for users, allow users to exchange of experience. Here, the all users of our 6V0-22.25 Study Materials can through own id to login to the platform, realize the exchange and sharing with other users, even on the platform and more users to become good friends, encourage each other, to deal with the difficulties encountered in the process of preparation each other.

Our 6V0-22.25 practice questions are on the cutting edge of this line with all the newest contents for your reference. Free demos are understandable and part of the 6V0-22.25 exam materials as well as the newest information for your practice. And because that our 6V0-22.25 Study Guide has three versions: the PDF, Software and APP online. So accordingly, we offer three versions of free demos for you to download.

6V0-22.25 Download, 6V0-22.25 Valid Test Voucher

Our study material is a high-quality product launched by the ValidExam platform. And the purpose of our study material is to allow students to pass the professional qualification exams that they hope to see with the least amount of time and effort. If you are a child's mother, with 6V0-22.25 Test Answers, you will have more time to stay with your child; if you are a student, with 6V0-22.25 exam torrent, you will have more time to travel to comprehend the wonders of the world.

VMware Avi Load Balancer 30.x Administrator Sample Questions (Q151-Q156):

NEW QUESTION # 151

Which function is performed by the data plane?

- A. Service Engine lifecycle management
- **B. Pool health monitoring**
- C. Configuration backups
- D. Log indexing

Answer: B

Explanation:

In Avi Load Balancer architecture, the data plane is provided by Service Engines. Service Engines process application traffic, host Virtual Services, terminate client and server connections where appropriate, perform load balancing decisions, and execute pool health monitoring. The Controller is the centralized management, control, and analytics platform; it handles configuration, orchestration, lifecycle management, and log indexing. Configuration backups are also Controller administrative functions rather than Service Engine data- plane functions. Health monitoring must occur close to the traffic path because Service Engines need to know whether backend pool members are available before sending client requests to them. Therefore, among the listed options, Pool

health monitoring is the function performed by the data plane.

NEW QUESTION # 152

An application owner reports that their application is "down". An Operator checks the Avi dashboard and finds that the Health Score for the corresponding virtual service is 1. The Operator observes that all four components of the Health Score (Performance, Resource, Anomaly, Security) are extremely low. What are the possible root causes for such a catastrophic failure? (Select all that apply.)

- A. The administrator's password for the Avi Controller UI has expired.
- B. A network outage has occurred between the Avi Controller and the Service Engines.
- C. The "Log Successful Checks" option on the health monitor was disabled.
- **D. All backend servers in the pool are powered off or have lost network connectivity.**
- E. The virtual service's VIP address has been misconfigured on the upstream router.
- **F. The single Service Engine hosting the virtual service has crashed or lost power.**

Answer: D,F

NEW QUESTION # 153

A DevOps Engineer is setting up a fully automated environment using an ACME-compliant Certificate Authority like "Let's Encrypt" to manage certificates for public-facing websites. Which Avi feature automates the entire lifecycle of these certificates, including initial creation, domain validation, and periodic renewal?

- A. The Virtual Service's Analytics Profile
- B. A ControlScript triggered by a "Certificate Expiring" alert
- **C. The Certificate Management Profile**
- D. The SSL/TLS Profile

Answer: C

NEW QUESTION # 154

An existing Layer 7 Virtual Service is terminating SSL/TLS with WAF enabled. How would an administrator add support for SMTP on the same FQDN and Virtual IP?

- A. Add the SMTP listening ports with a separate L4 Application Profile to the same L7 SSL/TLS Virtual Service, and disable destination port translation to the existing server pool
- B. Add the SMTP listening ports with a separate L4 Application Profile to the same L7 SSL/TLS Virtual Service, and use content switching to select the SMTP pool based on inbound port/protocol
- C. Create a second Virtual Service and IP for SMTP, and add a new record in DNS to handle SMTP separately
- **D. Create a second Virtual Service that reuses the same Virtual IP as the L7 SSL/TLS Virtual Service with separate listening ports, an L4 Application Profile, and a back-end SMTP pool**

Answer: D

Explanation:

Avi Load Balancer supports sharing a single VIP across multiple Virtual Services when the Virtual Services use different listener ports. This is the correct design when different application protocols must be served on the same IP address but require different profiles, pools, and processing behavior. An existing Layer 7 HTTPS Virtual Service with SSL termination and WAF should not be converted into a mixed L7/L4 object for SMTP.

SMTP should use its own Virtual Service with an appropriate Layer 4 profile and backend SMTP pool.

Broadcom documentation specifically states that a single VIP can be shared across multiple Virtual Services by choosing different ports for each Virtual Service. Therefore, the correct approach is to create a second Virtual Service reusing the same VIP, with separate SMTP listener ports, L4 profile, and SMTP pool.

NEW QUESTION # 155

What is the relationship between a Service Engine and a Virtual Service? (Select all that apply.)

- A. Service Engines are logically grouped into Virtual Services.
- B. A single Service Engine can host multiple, different Virtual Services.
- C. A single Virtual Service can be placed on (scaled out across) multiple Service Engines.
- D. A Virtual Service must be configured with the IP address of the Service Engine it will run on.
- E. A Service Engine pulls its configuration by connecting to the Virtual IP address of its assigned Virtual Service.
- F. A Service Engine executes the data plane functions defined by the Virtual Service configuration.

Answer: B,C,F

NEW QUESTION # 156

.....

Our 6V0-22.25 prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate VMware Avi Load Balancer 30.x Administrator exam torrent to the client and the questions and the answers we provide are based on the real exam. We can promise to you the passing rate is high and about 98%-100%. Our 6V0-22.25 test braindumps also boosts high hit rate and can stimulate the exam to let you have a good preparation for the exam. Our 6V0-22.25 prep torrent boost the timing function and the content is easy to be understood and has been simplified the important information. Our 6V0-22.25 test braindumps convey more important information with less amount of answers and questions and thus make the learning relaxed and efficient. If you fail in the exam we will refund you immediately. All VMware Avi Load Balancer 30.x Administrator exam torrent does a lot of help for you to pass the exam easily and successfully.
