Now, the test syllabus of the PCEP-30-02 exam is changing every year. More and more people choose to prepare the exam to improve their ability. So the PCEP-30-02 exam becomes more difficult than before. For our experts, they are capable of seizing the tendency of the real exam. The questions and answers of our PCEP-30-02 Guide materials will change every year according to the examination outlines. And we always keep them to be the latest and accurate.

Python Institute PCEP - Certified Entry-Level Python Programmer Sample Questions (Q14-Q19):

NEW QUESTION # 14

What is the expected result of running the following code?

□

- A. The code raises an unhandled exception.
- B. The code prints 2
- C. The code prints 0
- D. The code prints 1 .

Answer: A

Explanation:

Explanation

The code snippet that you have sent is trying to use the index method to find the position of a value in a list.

The code is as follows:

```
the_list = [1, 2, 3, 4, 5] print(the_list.index(6))
```

The code starts with creating a list called "the_list" that contains the numbers 1, 2, 3, 4, and 5. Then, it tries to print the result of calling the index method on the list with the argument 6. The index method is used to return the first occurrence of a value in a list. For example, the_list.index(1) returns 0, because 1 is the first value in the list.

However, the code has a problem. The problem is that the value 6 is not present in the list, so the index method cannot find it. This will cause a ValueError exception, which is an error that occurs when a function or operation receives an argument that has the right type but an inappropriate value. The code does not handle the exception, and therefore it will terminate with an error message. The expected result of the code is an unhandled exception, because the code tries to find a value that does not exist in the list. Therefore, the correct answer is C. The code raises an unhandled exception.

NEW QUESTION # 15

What is true about exceptions in Python? (Select two answers.)

- A. Not more than one except branch can be executed inside one try-except block.
- B. According 10 Python terminology, exceptions are thrown
- C. According to Python terminology, exceptions are raised
- D. Python's philosophy encourages developers to make all possible efforts to protect the program from the occurrence of an exception.

Answer: A,C

NEW QUESTION # 16

Arrange the code boxes in the correct positions to form a conditional instruction which guarantees that a certain statement is executed when the temperature variable is equal to 0. 0.

□

Answer:

Explanation:

```
if temperature == 0.0:
```

Explanation:

```
* if
```

```
* temperature
```

```
* ==
```

```
* 0.0
```

```
* :
```

Arrange the boxes in this order:

This checks if temperature is exactly 0.0, and if so, runs the code inside the if block.

NEW QUESTION # 17

What is the expected output of the following code?

□

- A. The code raises an unhandled exception.
- B. 0
- C. ('Ampere*', '2021', 'False')
- **D. 1**

Answer: D

NEW QUESTION # 18

A program written in a high-level programming language is called:

- A. a binary code
- **B. a source code**
- C. machine code
- D. the ASCII code

Answer: B

NEW QUESTION # 19

.....

Latest PCEP-30-02 exam torrent contains examples and diagrams to illustrate points and necessary notes under difficult points. Remember and practice what PCEP-30-02 quiz guides contain will be enough to cope with the exam this time. When dealing with the similar exam in this area, our former customers order the second even the third time with compulsion and confidence. That can be all ascribed to the efficiency of our PCEP-30-02 Quiz guides. On our word of honor, these PCEP-30-02 test prep will help you who are devoid of efficient practice materials urgently.
