

# 免費PDF CNX-001更新和資格考試和高效率CNX-001考古題分享的領導者

P.S. KaoGuTi在Google Drive上分享了免費的2025 CompTIA CNX-001考試題庫：[https://drive.google.com/open?id=1\\_dZcC2yLN9i6DCnlA8qFJjYBKyyUv-Hr](https://drive.google.com/open?id=1_dZcC2yLN9i6DCnlA8qFJjYBKyyUv-Hr)

如果你不知道如何更有效的通過考試，我給你一個建議是選擇一個良好的培訓網站，這樣可以起到事半功倍的效果。我們KaoGuTi網站始終致力於為廣大考生提供全部真實的 CompTIA的CNX-001認證的考試培訓資料，KaoGuTi CompTIA的CNX-001認證考試考古題軟體供應商授權的產品，覆蓋率廣，可以為你節省大量的時間和精力。

## CompTIA CNX-001 考試大綱：

| 主題   | 簡介                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 主題 1 | <ul style="list-style-type: none"><li>• Network Operations, Monitoring, and Performance: This section of the exam measures skills of Network Operations Specialists and covers day-to-day operational management of network environments. It involves configuring monitoring tools, analyzing performance data, and responding to alerts. Candidates are evaluated on their ability to maintain network health, optimize throughput, and ensure consistent uptime by applying best practices for proactive performance tuning and operations management.</li></ul>    |
| 主題 2 | <ul style="list-style-type: none"><li>• Network Security: This section of the exam measures the skills of Security Engineers and covers core practices for protecting network infrastructure. It includes applying firewall rules, implementing access control measures, and designing secure segmentation strategies. The content emphasizes threat mitigation techniques, secure configuration of networking devices, and adherence to compliance frameworks, preparing professionals to safeguard both internal and external network assets effectively.</li></ul> |
| 主題 3 | <ul style="list-style-type: none"><li>• Network Troubleshooting: This section of the exam measures the skills of Network Support Engineers and covers diagnosing and resolving connectivity and performance issues across various network layers. It focuses on identifying root causes, using diagnostic tools, and applying systematic troubleshooting methodologies. The goal is to ensure that professionals can minimize downtime, restore service quickly, and prevent recurring problems by maintaining a resilient and stable network environment.</li></ul>  |

|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 主題 4 | <ul style="list-style-type: none"> <li>• Network Architecture Design: This section of the exam measures the skills of Network Architects and covers the ability to design scalable, secure, and efficient network architectures. It focuses on understanding design principles, selecting appropriate network components, and aligning architecture decisions with organizational needs. Candidates are expected to demonstrate a solid grasp of topology planning, high-availability configurations, and integration of cloud and on-premise systems to ensure reliability and performance.</li> </ul> |

## CompTIA CNX-001考古題分享 & 最新CNX-001考證

如果你對KaoGuTi的關於CompTIA CNX-001 認證考試的培訓方案感興趣，你可以先在互聯網上免費下載部分關於CompTIA CNX-001 認證考試的練習題和答案作為免費嘗試。我們對選擇我們KaoGuTi產品的客戶都會提供一年的免費更新服務。

### 最新的 CloudNetX CNX-001 免費考試真題 (Q59-Q64):

#### 問題 #59

After a company migrated all services to the cloud, the security auditor discovers many users have administrator roles on different services. The company needs a solution that:

- \* Protects the services on the cloud
- \* Limits access to administrative roles
- \* Creates a policy to approve requests for administrative roles on critical services within a limited time
- \* Forces password rotation for administrative roles
- \* Audits usage of administrative roles

Which of the following is the best way to meet the company's requirements?

- A. Conditional access
- B. Privileged access management
- C. Session-based token
- D. Access control list

答案: B

#### 解題說明:

Comprehensive and Detailed Explanation From Exact Extract:

Privileged Access Management (PAM) is the optimal solution to control, audit, and secure administrative access to systems and services. PAM enables role-based approval workflows, time-limited access, auditing, and credential rotation, fully aligning with the requirements.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Identity and Access Controls":

"Privileged Access Management allows fine-grained control over administrator-level access, supports just-in-time access provisioning, password rotation, and audit logging." Other options:

- \* B. Session-based tokens allow temporary access but do not enforce policies or auditing.
- \* C. Conditional access provides policy enforcement based on context but lacks full PAM features.
- \* D. ACLs control access to resources but don't manage privilege workflows or audits.

#### 問題 #60

A network engineer is establishing a wireless network for handheld inventory scanners in a manufacturing company's warehouse. The engineer needs an authentication mechanism for these scanners that uses the Wi-Fi network and works with the company's Active Directory. The business requires that the solution authenticate the users and authorize the scanners. Which of the following provides the best solution for authentication and authorization?

- A. PKI
- B. RADIUS
- C. LDAP
- D. TACACS+

**答案： B**

解題說明：

Using a RADIUS server with 802.1X on the Wi-Fi infrastructure allows the scanners (and their users) to be authenticated against Active Directory and mapped to the correct authorization policies. TACACS+ is geared toward device management, LDAP alone doesn't handle the Wi-Fi 802.1X handshake, and PKI by itself wouldn't provide the user-to-device authorization flow needed. RADIUS gives you both authentication and authorization tied into AD.

#### 問題 #61

A company hosts its applications on the cloud and is expanding its business to Europe. The company must comply with General Data Protection Regulation to limit European customers' access to data. The network team configures the firewall rules but finds that some customers in the United States can access data hosted in Europe. Which of the following is the best option for the network team to configure?

- A. CDN
- B. Network security groups
- **C. Geofencing rule**
- D. SASE

**答案： C**

解題說明：

Using a geofencing (geo#restriction) policy lets you block or allow traffic based on the client's geographic location. This ensures that only users in approved regions (e.g., the United States) can reach the European-hosted data, effectively preventing unintended European customer access without complex IP ACLs.

#### 問題 #62

A company is experiencing Wi-Fi performance issues. Three Wi-Fi networks are available, each running on the 2.4 GHz band and on the same channel. Connecting to each Wi-Fi network yields slow performance. Which of the following channels should the networks be configured to?

- **A. Channel 1, Channel 6, and Channel 11**
- B. Channel 3, Channel 5, and Channel 10
- C. Channel 1, Channel 2, and Channel 3
- D. Channel 2, Channel 4, and Channel 9

**答案： A**

解題說明：

These are the three non-overlapping channels in the 2.4 GHz band, eliminating co-channel and adjacent-channel interference for optimal Wi-Fi performance.

#### 問題 #63

A company is experiencing multiple switch failures. The network analyst discovers the following:

- \* Network recovery time is unacceptable and occurs after the shutdown of some switches.
- \* Some loops were detected in the network.
- \* No broadcast storm was detected.

Which of the following is the most cost-effective solution?

- A. Add multiple VLANs.
- B. Implement tagging.
- **C. Implement STP.**
- D. Add a new Layer 3 switch.

**答案： C**

解題說明：
