## 最高のPCI SSCのQSA\_New\_V4試験対策材料を無料でダウンロード

当社は、QSA\_New\_V4学習教材の新しいバージョンのリリースに成功しました。おそらく、QSA\_New\_V4試験の準備に深く悩まされているでしょう。これで、QSA\_New\_V4学習教材の助けを借りて、完全にリラックスした気分になれます。当社の製品は信頼性が高く、優れています。さらに、当社のQSA\_New\_V4学習教材の合格率は市場で最高です。QSA\_New\_V4学習教材を購入することは、あなたが半分成功したことを意味します。QSA\_New\_V4試験に初めて合格する場合、適切な決定は非常に重要です。

## PCI SSC QSA\_New\_V4 認定試験の出題範囲:

| トピック   | 出題範囲                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| トピック 1 | <ul style="list-style-type: none"><li>Payment Brand Specific Requirements: This section of the exam measures the skills of Payment Security Specialists and focuses on the unique security and compliance requirements set by different payment brands, such as Visa, Mastercard, and American Express. Candidates must be familiar with the specific mandates and expectations of each brand when handling cardholder data. One skill assessed is identifying brand-specific compliance variations.</li></ul>             |
| トピック 2 | <ul style="list-style-type: none"><li>Real-World Case Studies: This section of the exam measures the skills of Cybersecurity Consultants and involves analyzing real-world breaches, compliance failures, and best practices in PCI DSS implementation. Candidates must review case studies to understand practical applications of security standards and identify lessons learned. One key skill evaluated is applying PCI DSS principles to prevent security breaches.</li></ul>                                        |
| トピック 3 | <ul style="list-style-type: none"><li>PCI Reporting Requirements: This section of the exam measures the skills of Risk Management Professionals and covers the reporting obligations associated with PCI DSS compliance. Candidates must be able to prepare and submit necessary documentation, such as Reports on Compliance (ROCs) and Self-Assessment Questionnaires (SAQs). One critical skill assessed is compiling and submitting accurate PCI compliance reports.</li></ul>                                         |
| トピック 4 | <ul style="list-style-type: none"><li>PCI Validation Requirements: This section of the exam measures the skills of Compliance Analysts and evaluates the processes involved in validating PCI DSS compliance. Candidates must understand the different levels of merchant and service provider validation, including self-assessment questionnaires and external audits. One essential skill tested is determining the appropriate validation method based on business type.</li></ul>                                     |
| トピック 5 | <ul style="list-style-type: none"><li>PCI DSS Testing Procedures: This section of the exam measures the skills of PCI Compliance Auditors and covers the testing procedures required to assess compliance with the Payment Card Industry Data Security Standard (PCI DSS). Candidates must understand how to evaluate security controls, identify vulnerabilities, and ensure that organizations meet compliance requirements. One key skill evaluated is assessing security measures against PCI DSS standards.</li></ul> |

## PCI SSC Qualified Security Assessor V4 Exam 認定 QSA\_New\_V4 試験問題 (Q11-Q16):

### 質問 # 11

Which of the following describes the intent of installing one primary function per server?

- A. To prevent server functions with a lower security level from introducing security weaknesses to higher- security functions on the same server.
- B. To reduce the security level of functions with higher-security needs to meet the needs of lower-security functions.
- C. To allow functions with different security levels to be implemented on the same server.
- D. To allow higher-security functions to protect lower-security functions installed on the same server.

正解: A

解説:

As per Requirement 2.2.1, the purpose of limiting each server to one primary function is to reduce the risk of functions with lower security needs compromising more critical functions.

\* Option A: #Incorrect. PCI DSS discourages combining different security-level functions.

\* Option B: #Correct. This is the intent: to prevent lower-security processes from weakening high-security environments.

\* Option C: #Incorrect. Functions shouldn't depend on one another for security.

\* Option D: #Incorrect. PCI DSS encourages raising security, not lowering it.

Reference: PCI DSS v4.0.1 - Requirement 2.2.1.

### 質問 # 12

An organization has implemented a change-detection mechanism on their systems. How often must critical file comparisons be performed?

- A. Periodically as defined by the entity
- **B. At least weekly**
- C. At least monthly
- D. Only after a valid change is installed

正解: B

解説:

PCI DSS Requirement for File Integrity Monitoring (FIM):

\* Requirement 11.5 mandates the use of file integrity monitoring to detect unauthorized changes to critical files, and comparisons must be performed at least weekly unless otherwise defined and justified in the entity's risk assessment.

Purpose of Weekly Comparisons:

\* Ensures timely detection of unauthorized modifications, reducing the risk of compromise.

Invalid Options:

\* B/D: These timeframes are not specific to PCI DSS unless documented as part of a risk-based approach.

\* C: Comparisons must occur regularly, not just after changes are installed.

### 質問 # 13

What process is required by PCI DSS for protecting card-reading devices at the point-of-sale?

- **A. Devices are periodically inspected to detect unauthorized card skimmers.**
- B. Devices are physically destroyed if there is suspicion of compromise.
- C. Device identifiers and security labels are periodically replaced.
- D. The serial number of each device is periodically verified with the device manufacturer.

正解: A

解説:

Requirement 9.9.2 of PCI DSS v4.0.1 mandates that entities regularly inspect POS devices to detect signs of tampering or skimming. This includes physical inspections to identify unexpected additions, unauthorized stickers, broken seals, etc.

\* Option A: Correct. Regular inspection for skimming/tampering is required.

\* Option B: Incorrect. There is no mandate for manufacturer serial number verification.

\* Option C: Incorrect. PCI DSS does not require routine replacement of device identifiers or labels.

\* Option D: Incorrect. Devices may be investigated if compromised, but not necessarily destroyed.

### 質問 # 14

An organization wishes to implement multi-factor authentication for remote access, using the user's individual password and a digital certificate. Which of the following scenarios would meet PCI DSS requirements for multi-factor authentication?

- **A. A different certificate is assigned to each individual user account, and certificates are not shared.**
- B. Certificates are assigned only to administrative groups, and not to regular users.
- C. Change control processes are in place to ensure certificates are changed every 90 days.
- D. Certificates are logged so they can be retrieved when the employee leaves the company.

正解: A

解説:

PCI DSS Requirement 8.4.2 requires multi-factor authentication (MFA) to consist of two or more independent authentication factors. MFA must also not involve shared credentials, so each certificate must be tied to a specific individual.

\* Option A: Incorrect. MFA must apply to all applicable users, not just admins.

\* Option B: Correct. This meets PCI DSS: unique credentials per user and non-shared certificates.

\* Option C: Incorrect. Retaining certificates post-employment is a risk, not a compliance action.

\* Option D: Incorrect. PCI DSS doesn't mandate 90-day certificate rotation; rather, secure usage and revocation are key.

Reference: PCI DSS v4.0.1 - Requirement 8.4.2 and 8.6.1.

### 質問 #15

A "Partial Assessment" is a new assessment result. What is a "Partial Assessment"?

- A. A term used by payment brands and acquirers to describe entities that have multiple payment channels, with each channel having its own assessment.
- **B. An assessment with at least one requirement marked as "Not Tested".**
- C. A ROC that has been completed after using an SAQ to determine which requirements should be tested, as per FAQ 1331.
- D. An interim result before the final ROC has been completed.

正解: B

解説:

According to Section 12.2.3.3 of PCI DSS v4.0.1, a Partial Assessment is defined as a result where at least one PCI DSS requirement is marked as "Not Tested." This is typically seen during gap assessments or pre-validation efforts, not official compliance validation.

\* Option A#Incorrect. SAQs are self-assessments; Partial Assessment is a different concept.

\* Option B#Incorrect. Interim drafts are not labeled as "Partial".

\* Option C#Incorrect. That is a misinterpretation of segmentation by payment channel.

\* Option D#Correct. "Not Tested" = Partial Assessment.

### 質問 #16
