Peoplecert PeopleCert DevOps Foundationv3.6Exam Sample Questions (Q23-Q28):

NEW QUESTION # 23
Which of the following is NOT a benefit of using a Kanban board?

- A. It enables people to work collaboratively
- B. It reduces work in progress
- C. It defines policies and procedures
- D. It reduces idle time and waste

Answer: C

Explanation:
Kanban boards are visual management tools used to track work and manage flow. They provide transparency, limit work in progress (WIP), and help teams focus on delivering value quickly.
* A: Reducing WIP is a key Kanban principle that improves flow and delivery speed.
* C: Visibility fosters collaboration and shared ownership.
* D: By identifying bottlenecks and waste, Kanban helps reduce idle time.
B-defining policies and procedures-is not an inherent benefit of Kanban. While teams may display existing policies on a Kanban board, the board itself does not define them. Its role is to visualize work and flow, not to establish governance rules.
Thus,Bis the correct "NOT" benefit.

NEW QUESTION # 24
An organization is struggling to reduce delays when launching new projects.
Which of the following automation practices could help reduce these delays?

- A. All of the Above
- B. Treating infrastructure as code
- C. Automated continuous integration and builds
- D. Test-driven development

Answer: A

Explanation:
Reducing delays in launching projects requires eliminating manual, time-consuming tasks in the delivery process:
* A: Continuous Integration (CI) with automated builds speeds up integration and reduces defects.
* B: Test-Driven Development (TDD) ensures quality from the start, reducing rework and post- development bug fixing.
* C: Infrastructure as Code (IaC) enables rapid, repeatable provisioning of environments, avoiding manual setup delays.
All three practices contribute to faster, more reliable project starts. As PeopleCert notes, combining these practices creates a strong automation foundation, enabling organizations to move from idea to delivery quickly.
Therefore,D-All of the above-is correct.

NEW QUESTION # 25
Which of the following metrics relates to The Third Way?

- A. Change fail rate
- B. Change lead times
- C. Hypothesis or experiments log
- D. Change cycle times

Answer: C

Explanation:
TheThird Wayin DevOps emphasizescontinuous learning and experimentation. It's about fostering a culture where teams test hypotheses, take calculated risks, and learn from both successes and failures.
Ahypothesis or experiments logdirectly supports this principle by capturing:
* The changes or experiments attempted
* The hypothesis behind them
* The results and insights gained
Metrics likeA,B, andCare more aligned with theFirst Way(flow) andSecond Way(feedback). They measure speed and stability but not the experimental learning process itself.
By tracking experiments, organizations can make data-driven decisions, reinforce a learning culture, and continuously refine practices-core aspects of the Third Way.

NEW QUESTION # 26
Which statement is NOT TRUE?

- A. Continuous Deployment requires a manual push button
- B. Waterfall approaches can take advantage of continuous integration and test-driven development practices
- C. Continuous Delivery ensures software is always in a releasable state
- D. Continuous Integration requires developers commit code to trunk at least daily

Answer: A

Explanation:
Let's clarify what these terms mean in DevOps:
* Continuous Integration (CI):Developers integrate code into a shared repository frequently (ideally daily), with each integration automatically verified by tests.
* Continuous Delivery (CD):Ensures software is always in a releasable state. Every change can be deployed to production, but the deployment itself may be a manual decision.
* Continuous Deployment:Every change that passes automated tests is automatically deployed to production,withoutmanual intervention.
Why is D ("Continuous Deployment requires a manual push button") NOT TRUE?
BecauseContinuous Deploymentis aboutno manual intervention-once code passes all tests, it's automatically pushed live. Manual deployment is a feature of Continuous Delivery, not Continuous Deployment.
Extract-style reference:
"Continuous Deployment means that every change goes through the pipeline and is automatically put into production, resulting in many production deployments every day."
-Accelerate: The Science of Lean Software and DevOps, Jez Humble & Nicole Forsgren DevOps Foundation v3.6distinguishes between Continuous Delivery (manual trigger) and Continuous Deployment (fully automated).

NEW QUESTION # 27
An organization is finding that their annual budget cycle is failing to support their needs to pivot and scale according to the changes in

requirements coming from the business. What funding strategy would help them inject flexibility into their delivery process and match the cadence the business needs?

- A. Continuous funding
- B. Hedge betting-based funding
- C. Project-based funding
- D. Quarterly rolling waves

Answer: A

Explanation:
Continuous fundingreplaces rigid, annual budgeting with a more adaptive model. This approach aligns funding to value streams or long-lived products rather than fixed projects. Funds can be adjusted incrementally based on changing priorities, business feedback, and delivery performance.
This method supports DevOps by allowing teams to pivot quickly, experiment, and scale initiatives without waiting for lengthy budget approvals. It aligns financial governance with the iterative and adaptive nature of DevOps delivery.
A(project-based funding) locks budgets to specific outcomes and timelines, limiting flexibility.C(quarterly rolling waves) is more flexible than annual cycles but less responsive than continuous funding.Dis not a recognized funding approach in DevOps.
Therefore,Bis the correct choice.
