Pass-Sure Latest Deep-Security-Professional Test Online & Leader in Certification Exams Materials & Trusted Deep-Security-Professional Cert

Nowadays the competition in the society is fiercer and if you don't have a specialty you can't occupy an advantageous position in the competition and may be weeded out. Passing the test Deep-Security-Professional certification can help you be competent in some area and gain the competition advantages in the labor market. If you buy our Deep-Security-Professional Study Materials you will pass the Deep-Security-Professional exam smoothly. You will feel grateful for choosing us!

Trend Micro Certified Professional for Deep Security Sample Questions (Q56-Q61):

NEW QUESTION # 56
The Overrides settings for a computer are displayed in the exhibit. Which of the following statements is true regarding the displayed configuration?

- A. The Protection Modules identified as Inherited in the exhibit have not yet been enabled. Only the Web Reputation and Application Control Protection Modules have been enabled at this point.
- B. The configuration for the Protection Modules is inherited from the policy assigned to this computer, except for the configuration of the Web Reputation and Application Control Protection Modules which have been set at the computer level.
- C. The Protection Modules identified as Inherited in the exhibit have not yet been config-ured. Only the Web Reputation and Application Control Protection Modules have been configured.
- D. The Web Reputation and Application Control Protection Modules have been assigned a different policy that the other Protection Modules and as a result, are displayed with overrides.

Answer: B

Explanation:
When an override is present, settings for those modules (here, Web Reputation and Application Control) have been customized at the computer level and no longer inherit from the assigned policy. The others remain inherited, using policy-level settings.

Trend Micro Deep Security Administrator's Guide, Overrides Section

NEW QUESTION # 57
Which of the following Firewall rule actions will allow data packets to pass through the Firewall Protection Module without being subjected to analysis by the Intrusion Prevention Protection Module?

- A. Bypass
- B. Deny
- C. Allow
- D. Force Allow

Answer: A

Explanation:
The Bypass action in Deep Security's Firewall module allows specified traffic to skip both Firewall and Intrusion Prevention analysis, resulting in the most efficient possible flow for trusted communications.

NEW QUESTION # 58
Based on the configuration setting highlighted in the exhibit, what behavior can be expected during a malware scan?

- A. With the highlighted setting enabled, Deep Security Agents will scan files for unknown malware using Predictive Machine Learning.
- B. With the highlighted setting enabled, Deep Security Agents will scan files for viruses and malware using supplementary aggressive detection pattern files.
- C. With the highlighted setting enabled, Deep Security Agents will scan files for known malware as well as newly encounted malware by accessing the Suspicious Objects List.
- D. With the highlighted setting enabled, Deep Security Agents will scan files for known viruses and malware using patterns and any files deemed suspicious will be submitted to a configured Deep Discovery Analyzer for further analysis.

Answer: B

Explanation:
The highlighted option specifies, "Scan for exploits against known critical vulnerabilities and aggressive detection of unknown suspicious exploits." This means the agent uses additional, more aggressive detection patterns to identify not just known exploits but also suspicious and unknown exploit techniques in document files. Predictive Machine Learning and Suspicious Objects List are separate features, and Deep Discovery Analyzer integration is not referenced by this setting.

NEW QUESTION # 59
Which of the following statements is true regarding software inventories used as part of the Application Control Protection Module?

- A. An administrator can view the list of allowed of software in the inventory from the De-tails tab for each individual Computer.
- B. Disable the Application Control Protection Module when installing software upgrades, otherwise, the new software will be prevented from installing.
- C. An administrator can share the inventory of allowed software with other computers protected by Deep Security Agents, by copying the inventory database file (ac.db) from the source computer.
- D. When an administrator allows software that would be otherwise blocked by the En-forcement Mode, it isn't added to the

inventory of approved software. Instead, it is added to that computer's white list.

Answer: D

NEW QUESTION # 60

What is the purpose of the Deep Security Relay?

- A. Deep Security Relays maintain the caches of policies applied to Deep Security Agents on protected computers to improve performance.
- B. Deep Security Relays are responsible for retrieving security and software updates and distributing them to Deep Security Manager, Agents and Virtual Appliances.
- C. Deep Security Relays forward policy details to Deep Security Agents and Virtual Appliances immediately after changes to the policy are applied.
- D. Deep Security Relays distribute load to the Deep Security Manager nodes in a high-availability implementation.

Answer: B

Explanation:
Deep Security Relays download security and software updates from Trend Micro's servers (or a local update source) and distribute those updates to Agents, Virtual Appliances, and Managers. This reduces bandwidth and centralizes update management.
From the official documentation:
"Relays are responsible for retrieving security and software updates and distributing them to Deep Security Manager, Agents, and Virtual Appliances." References:
