社会でより良く生き残るためには、私たちの社会の要件を理解しなければなりません。理論的な知識に加えて、より実践的なスキルが必要です。CNX-001実践ガイドを使用すると、認定資格を迅速に取得でき、競争力が大幅に向上します。もちろん、あなたの利益はCNX-001証明書だけではありません。CNX-001学習教材は、あなたの働き方とライフスタイルを変えます。他の人よりも効率的に作業できます。CNX-001トレーニング資料は、このような大きな役割を果たすことができます。

CompTIA CNX-001 認定試験の出題範囲:

トピック	出題範囲
トピック 1	• Network Troubleshooting: This section of the exam measures the skills of Network Support Engineers and covers diagnosing and resolving connectivity and performance issues across various network layers. It focuses on identifying root causes, using diagnostic tools, and applying systematic troubleshooting methodologies. The goal is to ensure that professionals can minimize downtime, restore service quickly, and prevent recurring problems by maintaining a resilient and stable network environment.

トピック 2	• Network Architecture Design: This section of the exam measures the skills of Network Architects and covers the ability to design scalable, secure, and efficient network architectures. It focuses on understanding design principles, selecting appropriate network components, and aligning architecture decisions with organizational needs. Candidates are expected to demonstrate a solid grasp of topology planning, high-availability configurations, and integration of cloud and on-premise systems to ensure reliability and performance.
トピック 3	• Network Operations, Monitoring, and Performance: This section of the exam measures skills of Network Operations Specialists and covers day-to-day operational management of network environments. It involves configuring monitoring tools, analyzing performance data, and responding to alerts. Candidates are evaluated on their ability to maintain network health, optimize throughput, and ensure consistent uptime by applying best practices for proactive performance tuning and operations management.
トピック 4	• Network Security: This section of the exam measures the skills of Security Engineers and covers core practices for protecting network infrastructure. It includes applying firewall rules, implementing access control measures, and designing secure segmentation strategies. The content emphasizes threat mitigation techniques, secure configuration of networking devices, and adherence to compliance frameworks, preparing professionals to safeguard both internal and external network assets effectively.

資格証明書を使用すると、この専門職に就く資格が得られます。したがって、テストCNX-001認定を取得することは、将来の雇用にとって極めて重要です。また、CNX-001学習ツールは、短時間でCNX-001テストを取得したいユーザーに優れた学習プラットフォームを提供できます。弊社を信頼することを選択できる場合、CNX-001スタディガイドを使用すると良い経験が得られ、試験に合格し、テストCNX-001認定で良い成績を得ることができます。

CompTIA CloudNetX Certification Exam 認定 CNX-001 試験問題 (Q33-Q38):

質問 # 33

A network architect needs to design a solution to ensure every cloud environment network is built to the same baseline. The solution must meet the following requirements:

Use automated deployment.

Easily update multiple environments.

Share code with a community of practice.

Which of the following are the best solutions? (Choose two.)

- A. CI/CD pipelines
- B. Automated image deployment
- C. Deployment guides
- D. Private code repository
- E. Deployment runbooks
- F. Public code repository

正解: A、F

解説:

CI/CD pipelines: Automate the provisioning and configuration of network baselines across all environments, and make it easy to roll out updates consistently.

Public code repository: Enables your community of practice to collaborate, review, and contribute to shared IaC modules and templates, while making updates discoverable and reusable.

質問 # 34

A company is expanding operations and opening a new facility. The executive leadership team decides to purchase an insurance policy that will cover the cost of rebuilding the facility in case of a natural disaster.

Which of the following describes the team's decision?

- A. Business continuity
- **B. Risk transference**
- C. Memorandum of understanding
- D. Disaster recovery

正解: B

解説:

By purchasing an insurance policy, the company shifts the financial burden of rebuilding after a natural disaster to the insurer, which is the essence of risk transference.

質問 # 35

A company is migrating an application to the cloud for modernization. The engineer needs to provide dependencies between application and database tiers in the environment. Which of the following should the engineer reference in order to best meet this requirement?

- A. Internal knowledge base article
- B. Diagram of physical server locations
- C. SOW
- **D. CMDB**
- E. WBS

正解: D

解説:

A Configuration Management Database (CMDB) explicitly maps and documents the relationships and dependencies among configuration items, such as your application and database tiers, making it the ideal reference when migrating to the cloud.

質問 # 36

A company just launched a cloud-based application. Some users are reporting the application will not load. A cloud engineer investigates the issues and reports the following:

- * Not all users are experiencing the issue.
- * The application infrastructure is optimal.
- * Users experiencing the issue belong to the company's remote sales team.

Which of the following is most likely misconfigured?

- A. Ports and protocols
- B. IP addressing
- **C. Geolocation rules**
- D. Application load balancers

正解: C

解説:

Since only the remote sales team is affected and the infrastructure and network settings are correct, it's most likely that your geolocation or geo-restriction policies are blocking traffic from the regions where those users are located. Correcting those rules to allow their locations should restore access without impacting other users.

質問 #37

A network architect needs to build a new data center for a large company that has business units that process retail financial transactions. Which of the following information should the architect request from the company?

- A. Statement of work
- **B. Regulatory requirements**
- C. Business case study
- D. Internal reference architecture

正解： B

解説:

Comprehensive and Detailed Explanation From Exact Extract:

When building infrastructure for business units that process financial transactions (such as in the retail or banking sector), the architect must first understand all relevant compliance and regulatory requirements.

These may include PCI DSS, SOX, or GDPR, depending on the nature of the data and jurisdiction. These regulations influence design decisions regarding encryption, segmentation, data retention, and logging.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Compliance and Regulatory Considerations":

"Regulatory requirements such as PCI DSS, HIPAA, and others dictate the security controls, logging, data protection, and architectural design of infrastructure handling sensitive or financial data." Other options:

* B. Statement of Work defines project scope, but doesn't include legal/compliance mandates.

* C. Business case studies illustrate value or ROI, not security or compliance needs.

* D. Internal reference architectures may help with standards but are based on already defined requirements.

質問 # 38
