Trust the Experts and Use Online Microsoft PL-600 Practice Test Engine for Your Exam Preparation

Generally speaking, reviewing what you have learned is important, since it will help you have a good command of the knowledge points. PL-600 Online test engine has testing history and performance review, so that you can have a general review of what you have learned before next learning. In addition, PL-600 exam dumps is convenient and easy to study, it supports all web browsers and Android and iOS etc. You can also practice offline if you like. We provide you with free update for 365 days for PL-600 Exam Materials, so that you can get the latest information for the exam timely. And the latest information for PL-600 exam dumps will be auto sent to you.

Microsoft Power Platform is a powerful set of tools that can be used to create custom business applications. These tools include Power Apps, Power Automate, Power BI, and Power Virtual Agents. The platform is designed to be user-friendly, and it enables users to create customized apps and workflows without the need for extensive coding skills.

Microsoft Power Platform is a suite of tools that allows organizations to build custom applications, automate workflows, and analyze data. The platform includes Power BI, Power Apps, and Power Automate, which are used to create custom solutions that can be integrated with other Microsoft products and services. The PL-600 exam covers all aspects of the Power Platform, including solution design, development, deployment, and management.

Microsoft PL-600 Exam is a part of the Microsoft Certified: Power Platform Solution Architect Expert certification path. Microsoft Power Platform Solution Architect certification path is designed to help the candidates learn the skills and knowledge required to become a certified Power Platform Solution Architect. Microsoft Power Platform Solution Architect certification path includes two exams, including PL-600 and PL-400. The PL-600 exam focuses on designing and implementing complex business solutions using Microsoft Power Platform, while the PL-400 exam focuses on designing and implementing Power Platform applications.

Microsoft Power Platform Solution Architect Sample Questions (Q16-Q21):

NEW QUESTION # 16

You need to recommend a solution for agents when working with customers to make reservations.
What should you recommend?

- A. Business Process Flows
- B. Power Automate
- C. workflows
- D. task flows

Answer: A

Explanation:

Business process flows provide a guide for people to get work done. They provide a streamlined user experience that leads people through the processes their organization has defined for interactions that need to be advanced to a conclusion of some kind.

Use business process flows to define a set of steps for people to follow to take them to a desired outcome.

With business processes flows available as an entity, you can now use advanced finds, views, charts, and dashboards sourced from business process flow data for a given entity, such as a lead or opportunity.

Scenario:

Agents need a solution to replace paper reservation checklists.

Agents need dashboards to show a current count of all reservations on the entity.

Agents need a way to track reservation issues.

Agents need a visual indicator in the interface to determine the reservation step to provide a seamless customer experience.

Topic 3, Fabrikam, inc.

Current environment

Overview

Operations for the company are managed very informally. Only a small number of long-term employees are aware of all manufacturing processes. The company has been experiencing quality issues associated with its manufacturing operations and installations.

The company wants to implement a way to capture quality inspection results for each machine produced. Current inspection checklists are stored in the Files section of a Teams channel for inspectors. Inspectors commonly print the incorrect inspection checklist.

The company has specific inspection stations for certain inspection steps. Each station has the gauges and equipment required for related inspection steps. There is often a backlog at specific inspection stations. This results in delays in shipping machines to customers.

Accounting system

The current system does not handle shop floor or manufacturing planning functionality.

Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Employee information is maintained only within the accounting system. Access to the information is strictly controlled due to privacy regulations and company policies.

Other systems

The company has an enterprise Microsoft 365 subscription. The company uses Microsoft 365 only for sending and receiving email.

The company uses photos of employees to generate employee badges. Photos are uploaded into Microsoft 365 user profiles.

The company recently started using Dynamics 365 Field Service to manage and maintain the machines that it installs for its customers. The app has not been customized.

The company has added roles, skills, and certification proficiencies to Dynamics 365 Field Service resources to support both customer onsite inspections and final manufacturing inspections.

Requirements

Quality inspection app

Fabrikam is evaluating Microsoft Power Platform to determine whether it can meet the company's requirements for a manufacturing defect and quality inspection solution. Each machine produced must be subjected to a quality inspection at various points during production. Each machine must undergo a more extensive quality inspection before the machine can be shipped to the customer.

Inspection orders

Inspection orders must:

Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.

Include information about the person who performed each inspection step and any comments made by the inspector.

Be automatically marked as failed if one inspection step rating is marked as failed.

Be automatically marked for re-inspection should a machine fail inspection. The new inspection order must be created by using the originating inspection order as a template.

Inspectors must fill in findings comments and upload at least one photo for any inspection step that is marked as failed.

Inspection standardization

Standardized checklists must be stored in the solution for use by inspectors. A copy must be created when a new inspection is initiated. The solution must:

Prevent an inspector from proceeding to the next step of the checklist until required information for a step is entered.

Support the addition of steps to inspections to support custom features added to a machine for a customer.

Support the direct input of measurements from testing gauges to avoid incorrect readings being entered by inspectors.

Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.

Support the ability to store photo references within each inspection step to document defects found during inspections.

Security

Users must be active employees of Fabrikam

When a user signs into the inspection solution, the solution must display a picture of the employee who has signed in.

Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

You must prevent users from changing inspection order data once an inspection is marked as final.

Analytics and reporting

The solution must:

Provide metrics including existing and upcoming demand by inspection station, average time spent per user at a station, and average time a machine spends at each inspection point.

Provide metrics per inspector including number of inspections performed by month, and number of inspections per rating type (pass, fail).

Provide a printed quality certificate to be included with each machine.

Issues

During initial testing of the solution, testers report that they cannot see the photos taken during a previously failed inspection.

NEW QUESTION # 17

You are designing forms for a Microsoft Power Platform solution. Each person must see only the columns required for their department.

You need to ensure that the forms open correctly, display only the fields needed, and that data can be entered quickly. How should you design the form?

- A. Create one form for each department. Add all columns needed for all departments. Use business rules to hide columns.
- B. Add new columns to an existing form. Grant all departments security roles for that form.
- **C. Create one form for each department. Add only columns needed on the form for each department. Assign the appropriate security role to each form.**
- D. Create a shared form for all departments. Add all the columns. Add column-level security to columns not needed for each department.

Answer: C

NEW QUESTION # 18

You need to provide the IT specialists with design diagrams.

What should you provide?

- **A. Dynamics 365 Product Visualize**
- B. Entity relationship diagram (ERD)
- C. Business process modeler (BPM)
- B AI Builder

Answer: A

Explanation:

Scenario: IT specialists want to design Power BI reports. They need to understand the underlying table relationships of the system. Business process modeler (BPM) in Microsoft Dynamics Lifecycle Services (LCS) is a tool that you can use to create, view, and modify repeatable implementations that are based on business process libraries. BPM helps you align your business processes with industry-standard processes that are described by the American Productivity & Quality Center (APQC) Reference:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/bpm-overview>

NEW QUESTION # 19

A company uses Dynamics 365 Sales and Power BI.

Sales managers must be able to keep track of changes to their pipeline in the following ways:

Notify the sales managers when an Opportunity changes sales stage.

Notify the sales managers when the pipeline drops below 2.5M USD.

When reviewing the pipeline in Power BI, a sales executive must be able to add a Playbook to an Opportunity.

You need to recommend a solution that meets the company requirements.

Which combination of solutions should you recommend? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Box 1: Microsoft Power Automate, Microsoft Dataverse connector, and Microsoft 365 Outlook connector Use Microsoft Dataverse as the data source.

While Power Automate is a robust tool with ever-expanding capabilities, it also handles simple tasks with grace. A universal business need for many organizations is the ability to automate email notifications based on certain criteria: an opportunity is won, send an email to the sales manager; a case is closed, send an email to the customer; a work order is completed, send an email to the customer.

Power Automate can easily accommodate this using the Microsoft 365 Outlook connector.

Box 2: Microsoft Power Automate, Power BI data alerts, and Microsoft 365 connector Data alerts in the Power BI service: Set alerts to notify you when data in your dashboards changes beyond limits you set.

Box 3: Microsoft Power Automate, Power BI, Power Apps, and Microsoft Dataverse connector Reference:

<https://docs.microsoft.com/en-us/power-bi/create-reports/service-set-data-alerts>

NEW QUESTION # 20

A company plans to deploy multiple Microsoft Dataverse environments. You are supporting the go-live process.

The company reports the following access issues:

* Users can access account records but cannot read a column in the table.

* A licensed user receives an insufficient permission error when opening leads.

* A licensed user does not appear in the list of users available for security assignment.

You need to resolve the issues.

What should you do? To answer, select the appropriate options in the answer area NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

NEW QUESTION # 21

.....

Many students often start to study as the exam is approaching. Time is very valuable to these students, and for them, one extra hour of study may mean 3 points more on the test score. If you are one of these students, then Microsoft Power Platform Solution Architect exam tests are your best choice. Because students often purchase materials from the Internet, there is a problem that they need transport time, especially for those students who live in remote areas. When the materials arrive, they may just have a little time to read them before the exam. However, with PL-600 Exam Questions, you will never encounter such problems, because our materials are distributed to customers through emails.
