EMC Dell PowerEdge Foundations v2 Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

A data center technician is troubleshooting a server where multiple hard drives have become unresponsive simultaneously. Which server component failure is MOST likely to cause disconnection of multiple hard drives at once?

- A. Individual hard drive failure
- **B. The backplane failure**
- C. CPU failure
- D. PERC controller failure

Answer: B

Explanation:

The backplane in a PowerEdge server connects multiple hard drives to the system, and its failure can cause simultaneous disconnection of all attached drives, rendering them unresponsive. The backplane manages power and data pathways, so its malfunction disrupts multiple drives. CPU failure affects processing, not drive connectivity; individual drive failure typically impacts one drive; and PERC failure affects RAID but not physical connections. Backplane issues are critical in troubleshooting. Exact extract: "Explain the function of various storage components... Describe maintenance functions, shutdowns, reboots of a PowerEdge Server." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Maintenance (18%).

NEW QUESTION # 55

A telecommunications company is expanding its services to edge locations and requires servers that can handle full enterprise-level

compute but fit in limited telecom spaces. Which feature of edge-optimized PowerEdge servers is most critical for deployment in telecommunications environments?

- A. Their minimal footprint that is combined with full PowerEdge features and management
- B. Their specialized modules for high-density computing in controlled data centers
- C. Their GPU-optimized configurations for graphic-intensive applications
- D. Their rugged design for withstanding extreme outdoor conditions

Answer: A

Explanation:

Edge-optimized PowerEdge servers are designed with a minimal footprint while retaining full enterprise-level compute capabilities and management features like iDRAC, making them ideal for telecommunications environments with limited space. GPU optimization is for graphics, not telecom; high-density modules suit data centers; and rugged designs are for extreme conditions, not typical telecom setups. Minimal footprint with full features is key. Exact extract: "Describe and position a PowerEdge server in a solution - Edge (ROBO), Cloud, Core, Use Case." Reference: Dell PowerEdge Foundations v2 Exam Description (D-PE-FN-01), Topic: Server Architecture and Roles (22%).

NEW QUESTION # 56

An administrator is implementing LTO-4 drives in their backup solution. They plan to disable hardware data compression through their backup appliance.

What is the maximum data rate that can be achieved?

- A. 140 MB/s
- B. 120 MB/s
- C. 80 MB/s
- D. 160 MB/s

Answer: A

NEW QUESTION # 57

A customer created a RAID 6 volume using 4x 600GB disks.
