2026 High Pass-Rate JN0-232 – 100% Free Test Review | Security, Associate (JNCIA-SEC) Latest Exam Pattern

Do you still worry about that you can't find an ideal job and earn low wage? You can try to obtain the JN0-232 certification and if you pass the JN0-232 exam you will have a high possibility to find a good job with a high income. If you buy our JN0-232 questions torrent you will pass the exam easily and successfully. Our JN0-232 Study Materials are compiled by experts and approved by professionals with experiences for many years. The high quality of our JN0-232 exam questions can help you pass the JN0-232 exam easily.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q77-Q82):

NEW QUESTION # 77

What happens if no match is found in both zone-based and global security policies?

- A. The traffic is redirected to a predefined safe zone.
- B. The traffic is allowed by default.
- C. The traffic is discarded by the default security policy.
- D. The traffic is logged for further analysis.

Answer: C

Explanation:

If traffic does not match any zone-based or global security policy, the SRX applies the default security policy, which denies and discards the traffic silently. This ensures that only explicitly permitted traffic is allowed through the firewall.

NEW QUESTION # 78

You must monitor security policies on SRX Series devices dispersed throughout locations in your organization using a 'single pane of glass' cloud-based solution.

Which solution satisfies the requirement?

- A. Juniper Sky Enterprise
- B. J-Web
- C. Junos Space
- D. Junos Secure Connect

Answer: C

Explanation:

Junos Space is a management platform that provides a single pane of glass view of SRX Series devices dispersed throughout locations in your organization. It provides visibility into the security policies of the devices, allowing you to quickly identify and respond to security threats.

Additionally, it provides the ability to manage multiple devices remotely and in real-time, enabling you to quickly deploy and update security policies on all devices.

NEW QUESTION # 79

Which statement is correct about exception traffic?

- A. Exception traffic is anything that is rejected by security policies and requires additional processing.
- B. Exception traffic is only handled on the Packet Forwarding Engine.
- C. Exception traffic is rate-limited on the connection between the Packet Forwarding Engine and the Routing Engine.
- D. Exception traffic refers to malformed IP packets received on the Packet Forwarding Engine.

Answer: C

Explanation:

Exception traffic refers to traffic that must be sent from the Packet Forwarding Engine (PFE) to the Routing Engine (RE) for processing, such as routing protocol updates, management traffic, and control-plane destined packets.

* Option B: Correct. Exception traffic is rate-limited on the internal connection between the PFE and RE to protect the Routing Engine from denial-of-service attacks.

* Option A: Incorrect. Exception traffic is not handled only on the PFE; it requires RE involvement.

* Option C: Incorrect. Rejected traffic by security policies is simply dropped, not classified as exception traffic.

* Option D: Incorrect. Malformed packets are dropped, not considered exception traffic.

Correct Statement: Exception traffic is rate-limited between the PFE and RE.

NEW QUESTION # 80

Which two statements are correct about the Junos OS architecture? (Choose two.)

- A. Junos is built using independent software processes.
- B. Junos is built using a collection of interdependent software processes.
- C. Individual software processes can be restarted without impacting the others.
- D. Restarting a single software process causes synchronization issues until other processes are restarted.

Answer: A,C

Explanation:

Junos OS uses a modular architecture composed of independent software processes (daemons), each handling specific functions such as routing, management, or forwarding. Because these processes operate independently, any single process can be restarted individually without affecting the operation of the others, improving stability and fault isolation.

NEW QUESTION # 81

Which two statements are correct about security zones? (Choose two.)

- A. An interface can exist in multiple security zones.
- B. Interfaces in the same security zone must use separate routing instances.
- C. Interfaces in the same security zone must share the same routing instance.
- D. A security zone can contain multiple interfaces.

Answer: C,D

Explanation:

* Option B:Correct. Interfaces in the same security zone must belong to the same routing instance; zones cannot span multiple routing instances.

* Option D:Correct. A security zone can contain multiple interfaces, allowing grouping of similar trust levels (e.g., multiple LAN subnets in a trust zone).

* Option A:Incorrect. An interface can belong to only one zone at a time.

* Option C:Incorrect. Interfaces within the same zone cannot be split across routing instances.

Correct Statements:Interfaces in the same zone must share the same routing instance, and a zone can contain multiple interfaces.
