有用的NCP-MCA熱門認證 & 認證考試材料的領導者和一流的NCP-MCA權威認證

通過這幾年IT行業不斷的發展與壯大，NCP-MCA考試已經成為Nutanix考試裏的里程碑，可以讓你成為IT的專業人士，有數以百計的線上資源，提供Nutanix的NCP-MCA考試的問題，為什麼大多數選擇Testpdf，因為我們Testpdf裏有一支龐大的IT精英團隊，專注於Nutanix的NCP-MCA考試的最新資料。讓你無障礙通過Nutanix的NCP-MCA考試認證。Testpdf保證你第一次嘗試通過Nutanix的NCP-MCA考試取得認證，Testpdf會和你站在一起，與你同甘共苦。

最新的 Nutanix Certified Professional NCP-MCA 免費考試真題 (Q101-Q106):

問題 #101

An administrator has built a Playbook to run a Powershell script in a VM when a specific alert is generated. Several days later, the alert is generated, but the script does not execute and there are no Plays recorded for the Playbook. What is causing this issue?

- A. The path to the script was not correct.
- **B. The Playbook was never enabled.**
- C. The script executed, but closed with an error code.
- D. The version of Playbooks is not correct for the version of Prism Central.

答案：B

問題 #102

When a developer launches the created Blueprint within the Blueprint Editor, the application gets deployed correctly. However, when the Blueprint is launched via Marketplace, it gets a check login error. What is causing this issue?

- A. Prism Central can't communicate with Active Directory.
- B. User is not authorized to launch Blueprints.
- C. The SSH key within the user's laptop is not valid.
- **D. The credential in the Project Environment is invalid.**

答案: D

解題說明:

When a Blueprint is launched via Marketplace, it uses the credential that is configured in the Project Environment. If the credential is invalid, the Blueprint deployment will fail with a check login error. To fix this issue, the developer needs to verify and update the credential in the Project Environment and ensure that it has the required permissions to access the target infrastructure and applications. 問題 #103

When manually formatting parameters for supported triggers and actions within a playbook, what format is used?

- A. @@{trigger.source_entity_info.name}@@
- B. \$trigger.source_entity_info.name
- **C. {{trigger[0].source_entity_info.name}}**
- D. [trigger[0].source_entity_info.name]

答案: C

解題說明:

In Intelligent Operations (X-Play) Playbooks, the syntax for string interpolation (using parameters) differs from Self-Service (Calm).

* Playbook Syntax: X-Play uses the double curly brace syntax `{{ ... }}` to reference parameters.

* Example: To reference the name of the entity that triggered the playbook, the correct parameter string is `{{trigger[0].source_entity_info.name}}` or `{{trigger[0].alert_entity_info.name}}` depending on the trigger type.

* Contrast: `@@{...}@@` (Option B) is the syntax used in Self-Service (Calm) macros, not X-Play Playbooks.

問題 #104

An administrator is setting up Self-Service to centrally manage automation across the corporate environment.

The environment leverages tunnels to communicate with the VMs within their Virtual Private Cloud (VPC) protected environments.

How should the administrator configure Self-Service to manage the VMs within a VPC?

- A. Configure Prism Central with an additional IP address within the VPC.
- B. Configure the policy engine VM within the VPC to enable the tunnel VM to communicate with an external subnet that is routable to Prism Central.
- **C. Configure an external subnet to the VPC to enable the tunnel VM to reach Prism Central and establish a tunnel connection.**
- D. Configure an external subnet to the VPC to enable the tunnel VM to reach the policy engine VM and establish a tunnel connection.

答案: C

解題說明:

Comprehensive and Detailed Explanation

Nutanix Self-Service requires a Tunnel VM to establish communication between Prism Central and VPC- isolated workloads.

Documentation states that:

* The Tunnel VM must be able to reach Prism Central over a routable external network.

* An external subnet must exist so the Tunnel VM can initiate outbound connectivity to PC.

Thus, the correct configuration is:

Create an external subnet to allow the Tunnel VM to reach Prism Central.

Therefore, Option C is correct.

問題 #105

Which field is optional when creating a Category?

- A. Name
- B. Task
- C. Purpose
- D. Value

答案： C

解題說明：

When creating a Category in Nutanix, the "Purpose" field is optional. The mandatory fields are "Name" and "Value". The "Purpose" field is used to provide a description or context for the category but is not required for the category creation.
