Microsoft GitHub Foundations Sample Questions (Q65-Q70):

NEW QUESTION # 65
As a user, what feature can you use to merge proposed changes in a repository on GitHub?

- A. Issues
- B. Projects
- C. Pull requests
- D. Discussions

Answer: C

Explanation:
The feature you can use to merge proposed changes in a repository on GitHub is Pull requests. Pull requests are a core feature of GitHub, allowing developers to propose changes to a codebase, review code, discuss the changes, and eventually merge them into the main branch. This collaborative workflow ensures that code is reviewed and vetted before becoming part of the project.

NEW QUESTION # 66
If there are multiple README files, which of the following locations will be displayed first?

- A. Root
- B. /docs
- C. .github
- D. /src

Answer: A

Explanation:
When multiple README files exist in different locations within a GitHub repository, the README.md file located in the root directory of the repository will be displayed first by default. This file serves as the main documentation for the repository and is automatically rendered on the repository's home page.
Root Directory:
Option C is correct because the README.md file in the root directory is prioritized and displayed first on GitHub. This is the standard behavior for how GitHub presents documentation.
Incorrect Options:
Option A (.github) is incorrect because while a README.md file in the .github directory might be used for certain configurations, it is not the first to be displayed.
Option B (/src) is incorrect because the README.md in the src directory is not prioritized over the root.
Option D (/docs) is incorrect because documentation in the /docs folder is typically secondary to the root README.md.

NEW QUESTION # 67
Where should a repository admin navigate to view pre-built visualizations from repository data?

- A. Issues
- B. Charts
- C. Insights
- D. Settings

Answer: C

Explanation:
GitHub provides repository admins with a feature called "Insights" where they can view various pre-built visualizations and analytics related to the repository.
Insights:
Option C is correct because the "Insights" tab in a GitHub repository offers various pre-built visualizations, including contributions, traffic, code frequency, dependency graphs, and more. This helps admins and maintainers track the project's activity and health.
Other Options:
Option A (Settings) is incorrect because the Settings tab is where you configure repository settings, permissions, and integrations, but it does not provide visualizations of repository data.
Option B (Issues) is incorrect because the Issues tab is used for tracking bugs, enhancements, and other tasks but does not provide data visualizations.
Option D (Charts) is incorrect as there is no "Charts" tab or section in GitHub. The correct location for data visualizations is under

NEW QUESTION # 68
What is a gist?

- A. GitHub app
- B. Markdown document
- C. Git repository
- D. GitHub Pages site

Answer: C

Explanation:
A gist on GitHub is essentially a Git repository, albeit a simplified one, designed for sharing snippets of code, notes, or other text content. Gists support version control and can be public or secret.
Gist as a Git Repository:
Option B is correct because each gist is a Git repository, meaning you can clone it, commit changes, and even fork it, just like any other Git repository.
Incorrect Options:
Option A is incorrect because a gist is not an app; it's a feature of GitHub that provides a simplified repository.
Option C is incorrect because while a gist may contain Markdown documents, it is fundamentally a repository that can hold various file types.
Option D is incorrect because GitHub Pages is a separate service for hosting websites, not related to gists.

NEW QUESTION # 69
Which of the following is an Innersource development practice?

- A. Removing open source code from the organization
- B. Sharing code between teams within the organization
- C. Adopting open source code into the organization
- D. Making all repositories publicly accessible

Answer: B

Explanation:
Innersource is a development practice where an organization adopts open-source development methodologies within its own internal environment. The primary goal of innersource is to break down silos and encourage collaboration across different teams within the organization.
Sharing Code Between Teams:
Option B is correct because innersource involves sharing code between teams within the organization, similar to how open-source communities share code across the public domain. This practice fosters collaboration, improves code quality, and allows for reuse of code, reducing duplication of efforts.
Incorrect Options:
Option A is incorrect because adopting open-source code into the organization is related to using open-source software, not specifically to innersource practices.
Option C is incorrect because removing open-source code from the organization is contrary to the principles of both open source and innersource.
Option D is incorrect because making all repositories publicly accessible refers to open source, not innersource. Innersource typically involves keeping code internal to the organization.
