

Precise CWSP-208 Certification bring you First-Grade CWSP-208 Exam Fees for CWNP Certified Wireless Security Professional (CWSP)

P.S. Free & New CWSP-208 dumps are available on Google Drive shared by FreeDumps: https://drive.google.com/open?id=1bZY_u54fNk74yRSISwLLZF13FGdXkRZN

Tech firms award high-paying job contracts to Certified Wireless Security Professional (CWSP) (CWSP-208) certification holders. Every year many aspirants appear in the CWSP-208 test of the certification, but few of them cannot crack it because of not finding reliable Certified Wireless Security Professional (CWSP) prep materials. So, you must prepare with real exam questions to pass the certification exam. If you don't rely on actual exam questions, you will fail and loss time and money.

Memorizing these Certified Wireless Security Professional (CWSP) CWSP-208 valid dumps will help you easily attempt the CWNP CWSP-208 exam within the allocated time. Thousands of aspirants have passed their CWNP CWSP-208 Exam, and they all got help from our Certified Wireless Security Professional (CWSP) CWSP-208 updated exam dumps. For successful preparation, you can also rely on CWSP-208 real questions.

With the development of science and technology the internet in our daily life is playing a more and more important role! IT workers become high-salary people. CWNP certifications become hot vocational qualification certificate. FreeDumps offers the best CWSP-208 Guide Torrent files to help people clear exams and realize their idea better. We are engaged in this field more than 8 years. If you have dream in this field, our valid CWSP-208 guide torrent files will be a good chance for you.

CWNP Certified Wireless Security Professional (CWSP) Sample Questions (Q111-Q116):

NEW QUESTION # 111

Given: ABC Company has a WLAN controller using WPA2-Enterprise with PEAPv0/MS-CHAPv2 and AES- CCMP to secure their corporate wireless data. They wish to implement a guest WLAN for guest users to have Internet access, but want to implement some security controls. The security requirements for the hot-spot include:

- * Cannot access corporate network resources
- * Network permissions are limited to Internet access
- * All stations must be authenticated

What security controls would you suggest? (Choose the single best answer.)

- A. Use a WIPS to deauthenticate guest users when their station tries to associate with the corporate WLAN.
- B. Force all guest users to use a common VPN protocol to connect.
- C. Implement separate controllers for the corporate and guest WLANs.
- D. Configure access control lists (ACLs) on the guest WLAN to control data types and destinations.

- E. Require guest users to authenticate via a captive portal HTTPS login page and place the guest WLAN and the corporate WLAN on different VLANs.

Answer: E

Explanation:

This solution meets all the requirements:

Captive portals allow simple authentication for guest users.

VLAN separation enforces network segmentation.

HTTPS ensures authentication is encrypted.

Incorrect:

A). Separate controllers are unnecessary and costly.

B). WIPS enforcement is reactive, not proactive for normal access control.

C). ACLs alone don't enforce authentication.

E). VPN requirements would be overly complex for guests.

CWSP-208 Study Guide, Chapter 6 (Guest Network Architecture & Captive Portal Authentication)

NEW QUESTION # 112

Given: WLAN attacks are typically conducted by hackers to exploit a specific vulnerability within a network.

What statement correctly pairs the type of WLAN attack with the exploited vulnerability? (Choose 3)

- A. Zero-day attacks are always authentication or encryption cracking attacks.
- B. Hijacking attacks interrupt a user's legitimate connection and introduce a new connection with an evil twin AP.
- C. Association flood attacks are Layer 3 DoS attacks performed against authenticated client stations
- D. Management interface exploit attacks are attacks that use social engineering to gain credentials from managers.
- E. RF DoS attacks prevent successful wireless communication on a specific frequency or frequency range.
- F. Social engineering attacks are performed to collect sensitive information from unsuspecting users

Answer: B,E,F

Explanation:

C). RF DoS attacks use signal jamming or interference to prevent communication.

D). Hijacking uses deauthentication and re-association to force users onto rogue APs.

E). Social engineering uses manipulation to acquire credentials or sensitive information.

Incorrect:

A). Management interface exploit attacks typically involve web or CLI interface vulnerabilities, not social engineering.

B). Zero-day attacks are based on unknown vulnerabilities, not just limited to authentication or encryption.

F). Association flood attacks occur at Layer 2, not Layer 3.

NEW QUESTION # 113

Given: ABC Corporation's 802.11 WLAN is comprised of a redundant WLAN controller pair (N+1) and 30 access points implemented in 2004. ABC implemented WEP encryption with IPSec VPN technology to secure their wireless communication because it was the strongest security solution available at the time it was implemented. IT management has decided to upgrade the WLAN infrastructure and implement Voice over Wi-Fi and is concerned with security because most Voice over Wi-Fi phones do not support IPSec.

As the wireless network administrator, what new security solution would be best for protecting ABC's data?

- A. Migrate all 802.11 data devices to WPA-Personal, and implement a secure DHCP server to allocate addresses from a segmented subnet for the Voice over Wi-Fi phones.
- B. Migrate corporate data clients to WPA-Enterprise and segment Voice over Wi-Fi phones by assigning them to a different frequency band.
- C. Migrate to a multi-factor security solution to replace IPSec; use WEP with MAC filtering, SSID hiding, stateful packet inspection, and VLAN segmentation.
- D. Migrate corporate data and Voice over Wi-Fi devices to WPA2-Enterprise with fast secure roaming support, and

segment Voice over Wi-Fi data on a separate VLAN.

Answer: D

Explanation:

Comprehensive Detailed Explanation:

To support real-time applications like Voice over Wi-Fi:

WPA2-Enterprise ensures robust security using 802.1X and AES-CCMP.

Fast secure roaming (802.11r) is essential to maintain voice session quality.

VLAN segmentation improves network performance and security between voice and data devices.

Incorrect:

A). WPA-Enterprise is less secure than WPA2, and frequency band segmentation doesn't address QoS and security together.

C). WEP is deprecated and insecure even with added measures.

D). WPA-Personal lacks centralized authentication and doesn't support enterprise-grade security or fast roaming.

NEW QUESTION # 114

What statement accurately describes the functionality of the IEEE 802.1X standard?

- A. Port-based access control with dynamic encryption key management and distribution
- B. Port-based access control with support for authenticated-user VLANs only
- C. Port-based access control with mandatory support of AES-CCMP encryption
- **D. Port-based access control with EAP encapsulation over the LAN (EAPoL)**
- E. Port-based access control, which allows three frame types to traverse the uncontrolled port: EAP, DHCP, and DNS.

Answer: D

Explanation:

IEEE 802.1X is a port-based Network Access Control (PNAC) protocol that:

Provides authentication at the edge of the LAN (such as a wireless access point or switch port).

Encapsulates EAP messages over the LAN using the EAPoL (EAP over LAN) protocol.

This standard defines how devices are granted or denied access based on authentication status.

Incorrect:

B). Key management is part of 802.11i (not 802.1X directly).

C). VLAN assignment may occur, but it's not limited to authenticated-user VLANs.

D). AES-CCMP is a function of WPA2/802.11i, not 802.1X.

E). Only EAP is allowed over the uncontrolled port; DHCP/DNS pass only after authentication.

CWSP-208 Study Guide, Chapter 4 (802.1X Framework)

IEEE 802.1X-2010 Standard

NEW QUESTION # 115

You perform a protocol capture using Wireshark and a compatible 802.11 adapter in Linux. When viewing the capture, you see an auth req frame and an auth rsp frame. Then you see an assoc req frame and an assoc rsp frame. Shortly after, you see DHCP communications and then ISAKMP protocol packets. What security solution is represented?

- A. EAP-MD5
- B. WPA2-Personal with AES-CCMP
- C. 802.1X/EAP-TTLS
- D. 802.1X/PEAPv0/MS-CHAPv2
- **E. Open 802.11 authentication with IPSec**

Answer: E

Explanation:

The frame sequence described shows:

802.11 Open System authentication and association

DHCP communication (for IP configuration)

ISAKMP packets, which are part of IPSec (used for key exchange and tunnel negotiation) This indicates that link-layer authentication is not used, but instead, higher-layer encryption (IPSec VPN) secures communications.

Incorrect:

A and C. Would show EAP negotiation and 802.1X authentication frames.

D). WPA2-Personal would include a 4-Way Handshake before DHCP.

E). EAP-MD5 does not involve ISAKMP and is used within 802.1X authentication.
