UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q74-Q79):

NEW QUESTION # 74

Which stage involves analyzing the As-Is process and preparing documentation like the PDD?

- A. Process Analysis
- B. Project Closure
- C. Development and Testing
- D. Solution Design

Answer: A

Explanation:

The Process Analysis stage involves thoroughly analyzing the As-Is process and preparing the Process Definition Document (PDD). This stage is led by the Business Analyst and Solution Architect, often with input from process Subject Matter Experts (SMEs) from the Client Team.

Key activities include:

- * Shadowing process performers
- * Mapping step-by-step workflows
- * Identifying exceptions and business rules
- * Documenting input/output data
- * Noting system interactions

The PDD created in this stage becomes the foundation for the Solution Design and subsequent development phases. Accurate and complete documentation ensures that the automation solution will meet business needs and be technically sound.

NEW QUESTION # 75

In the Kickoff stage, which of the following must be defined and communicated?

- A. Post-deployment SLA
- B. Client team vacation schedules
- **C. Access to Studio and Orchestrator**
- D. Only UAT test cases

Answer: C

Explanation:

In the Kickoff stage, access to key platforms like UiPath Studio and Orchestrator must be clearly defined and communicated. Early access planning is essential to avoid development delays and ensure that developers, robots, and testers can interact with the required environments and systems.

In many projects, delays occur because access provisioning is not handled upfront. That's why UiPath emphasizes capturing these details early in the Application Tracker, with input from the Solution Architect and Infrastructure Engineer.

By discussing access needs during Kickoff, teams can involve the Client IT team early, prepare credentials and environments, and prevent blockers during later stages such as development and testing.

NEW QUESTION # 76

Which document captures the initial agreement on scope, timelines, and responsibilities between client and implementation teams?

- **A. Statement of Work (SOW)**
- B. UAT Plan
- C. Process Definition Document (PDD)
- D. Project Plan

Answer: A

Explanation:

The Statement of Work (SOW) captures the initial agreement between the Client Team and the Implementation Team. It defines the high-level scope, project timelines, responsibilities, deliverables, and engagement terms for the automation project.

The SOW is usually prepared before or during the Kickoff stage and serves as the formal agreement that sets expectations for all stakeholders. It provides clarity on:

- * What is to be delivered
- * By when
- * By whom
- * Under what conditions

Having a well-defined SOW is essential to avoid scope creep, timeline mismanagement, or resource conflicts.

It also helps align both parties and acts as a reference point throughout the project's lifecycle.

NEW QUESTION # 77

In which three stages should user availability be clearly defined and communicated?

- A. Solution Design, Testing, Discovery
- **B. Kickoff, Process Analysis, UAT**
- C. Business Case Validation, Solution Design, UAT
- D. Deployment, Hypercare, Project Closure

Answer: B

Explanation:

User availability should be clearly defined and communicated in the Kickoff, Process Analysis, and UAT stages. These stages require direct interaction with Client Team members such as process owners, subject matter experts (SMEs), and end users.

* During Kickoff, availability is discussed to plan for workshops, document reviews, and approvals.

* In Process Analysis, SMEs are needed to walk through the As-Is process for accurate documentation.

* In UAT, end users test the solution to ensure it meets business needs. Their availability is crucial for timely validation and sign-off. Clear communication of availability in these stages helps avoid scheduling conflicts, delays, and incomplete information gathering.

NEW QUESTION # 78

Which of the following best describes the main benefit of documenting an organized lifecycle for automation projects?

- A. Delays in testing and review
- **B. Consistent quality, faster turnaround, and successful implementations**
- C. Reduces the need for communication among teams
- D. Increased need for manual approval

Answer: B

Explanation:

Documenting and following an organized lifecycle for automation projects - as outlined in the UiPath Automation Implementation Methodology - leads to consistent quality, faster turnaround times, and more successful implementations.

Each stage in the lifecycle - from Kickoff to Project Closure - has defined roles, responsibilities, deliverables, and checkpoints. This structured approach helps teams stay aligned, reduces misunderstandings, enables better risk management, and ensures that issues are caught early.

With a clear lifecycle, automation projects become repeatable, scalable, and manageable, even as the number of automated processes grows. This approach supports long-term success and helps organizations build sustainable automation programs with measurable value.
