問題 #52

Who leads Suite Integration activities?

- A. Customer Success Manager
- **B. SAP Deployment Lead**
- C. SAP Support
- D. Partner/Customer Functional Lead

答案： B

解題說明：

The SAP Deployment Lead is responsible for leading Suite Integration activities across SAP Ariba solutions.

This role acts as the primary coordinator and facilitator for integration efforts, ensuring smooth data flow, process alignment, and technical synchronization between sourcing, procurement, contracts, and other modules in the Ariba suite. The Deployment Lead works closely with the customer's functional teams, partners, and technical specialists to manage integration scope, timelines, and troubleshooting.

SAP Support typically provides post-go-live assistance but does not lead integration planning. Functional leads focus on configuration and business processes but lack overarching integration responsibility. Customer Success Managers focus on adoption

and satisfaction rather than technical integration.

Therefore, the Deployment Lead role is critical for coordinating complex multi-solution projects and ensuring a unified suite experience.

問題 #53

Users are able to publish a contract workspace without populating the Supplier field. What action can be performed on the Supplier field to force population before publishing?

- A. Configure a visibility condition
- B. Enable Required
- C. Enable Require value before publish
- D. Configure a validity condition

答案： C

解題說明：

SAP Ariba provides a specific property in the Advanced tab called "Require value before publish", which ensures that a field must be populated prior to the contract workspace being published. Enabling this option on the Supplier field enforces this mandatory behavior during the publish action. The standard "Required" checkbox only enforces field completion in the UI during data entry but does not prevent publishing if the field is empty. Visibility conditions control whether the field is displayed, not whether it is required at publish. Validity conditions enforce value correctness but not presence at publish time. This feature enhances data completeness at critical lifecycle points.

問題 #54

You have a custom string field with a list of values. The values are represented as an Enumeration. Which of the following applies?

- A. In the enumeration file, the Value column must only contain whole numbers
- B. The display order of the values is alphabetical
- C. The display order in the drop down matches the order defined in the enumeration file
- D. The user can filter the values using the search box in the chooser

答案： C

解題說明：

For single-select enumeration fields, the dropdown list order in SAP Ariba exactly follows the order in which values are defined in the enumeration file, not alphabetical. Alphabetical sorting applies only to multi-select chooser fields. The Value column can be text or integers depending on field type, and search/filter boxes are available only on chooser (multi-select) fields, not single-select dropdowns.

問題 #55

How can you make the attributes of a Flex Master Data field reportable?

- A. Flex Master Data objects automatically include all attributes as reportable without any additional configuration.
- B. Flex Master Data objects and their attributes cannot be made reportable
- C. When the Flex Master Data Template is created, the attributes can be marked as reportable or not.
- D. Create a custom reportable field and use a defaulting expression to set the value of the Flex Master Data attribute

答案： C

解題說明：

When creating a Flex Master Data (FMD) template, you can specify which attributes are reportable by marking them accordingly during template setup. Only attributes marked as reportable will be accessible in reporting tools within SAP Ariba.

While some users employ workarounds by creating custom fields with defaulting expressions to surface FMD attribute values, the direct and supported method is to configure reportability at the attribute level within the FMD template itself.

This capability ensures efficient and accurate reporting without requiring complex custom fields or expressions.

問題 #56

When preparing to load legacy contracts during a Bluefield deployment in SAP Ariba Contracts, which of the following actions are required to ensure a successful migration?

- A. Use the exact same process and tools as used in the Greenfield migration scenario to upload legacy contracts.
- B. Create a new customized contract upload process specifically for Bluefield deployments to accommodate differences in site structure.
- C. Manually enter legacy contract data into SAP Ariba Contracts using the application's UI instead of using import tools.
- D. Skip the legacy contract upload step if the Production site already contains migrated Flex Master Data Templates.

答案： A
