Netskope NSK300인증덤프가 Itcertkr 전문가들의 끈임 없는 노력 하에 최고의 버전으로 출시되었습니다. 여러분의 꿈을 이루어드리려고 말이지요. IT업계에서 자기만의 자리를 잡고 싶다면 Netskope NSK300인증시험이 아주 좋은 자격증입니다. 만약 Netskope NSK300인증시험 자격증이 있다면 일에서도 많은 변화가 있을 것입니다, 연봉상승은 물론, 자기자신만의 공간도 넓어집니다.

Netskope NSK300 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • Netskope Platform Troubleshooting: This section of the exam measures the skills of Support Engineers and focuses on identifying and resolving common issues within the Netskope platform. It includes troubleshooting client connectivity problems, analyzing steering methods, resolving general connectivity concerns, and addressing SAML integration issues. The section ensures candidates can diagnose and fix issues that impact platform performance and user access.

주제 2	<ul style="list-style-type: none"> • Netskope Platform Monitoring: This section of the exam measures the capabilities of Security Operations Center (SOC) Analysts and focuses on monitoring the platform through reporting and analytics tools. It highlights how Netskope insights support visibility into user activity, cloud app behavior, and policy effectiveness to help organizations maintain a continuous cloud security posture.
주제 3	<ul style="list-style-type: none"> • Netskope Platform Implementation: This section of the exam measures the abilities of Cloud Security Engineers and focuses on implementing the Netskope Security Cloud Platform using recommended steering architectures and deployment approaches. It includes key concepts such as API-enabled protection and real-time protection features, ensuring candidates understand how to deploy Netskope to secure cloud usage effectively within enterprise networks.
주제 4	<ul style="list-style-type: none"> • Cloud Security Solutions: This section of the exam measures the skills of Cloud Security Analysts and covers the core components and functions of the Netskope Security Cloud Platform. It includes understanding how the platform integrates with enterprise environments, the deployment methods supported by Netskope, and the role of various microservices in delivering cloud-based security. The focus is on ensuring candidates can recognize how Netskope's architecture protects users, applications, and data across cloud services.
주제 5	<ul style="list-style-type: none"> • Netskope Platform Management: This section of the exam measures the skills of Security Administrators and covers essential administrative tasks required to manage the Netskope Security Cloud Platform. It includes managing DLP functions, handling identity integrations, and monitoring Netskope components to maintain platform stability. The domain ensures professionals can manage daily operations and maintain strong access, data, and security controls.

최신 NSK300유효한 최신덤프 인증공부문제

Icertkr를 선택함으로써, Icertkr는 여러분Netskope인증NSK300시험을 패스할 수 있도록 보장하고, 만약 시험실패시 Icertkr에서는 덤프비용 전액 환불을 약속합니다.

최신 Netskope NCCSA NSK300 무료 샘플문제 (Q33-Q38):

질문 # 33

You are implementing a solution to deploy Netskope for machine traffic in an AWS account across multiple VPCs. You want to deploy the least amount of tunnels while providing connectivity for all VPCs. How would you accomplish this task?

- A. Use IPsec tunnels from the AWS Transit Gateway.
- B. Use IPsec tunnels from the AWS Virtual Private Gateway.
- C. Use GRE tunnels from the AWS Transit Gateway.
- D. Use GRE tunnels from the AWS Virtual Private Gateway

정답: A

설명:

The best approach to deploy Netskope for machine traffic across multiple VPCs in an AWS account with the least amount of tunnels while providing connectivity for all VPCs is to use IPsec tunnels from the AWS Transit Gateway. This method allows you to use the same Site-to-Site VPN connection to Netskope for multiple VPCs, thus minimizing the number of tunnels required¹². The AWS Transit Gateway acts as a network transit hub, enabling you to connect your VPCs and on-premises networks through a central point of management and control. Using IPsec tunnels with the AWS Transit Gateway ensures that all VPCs connected to it utilize the same IPsec tunnel between the transit gateway and Netskope POP1.

질문 # 34

You deployed Netskope Cloud Security Posture Management (CSPM) using pre-defined benchmark rules to monitor your cloud posture in AWS, Azure, and GCP. You are asked to assess if you can extend the Netskope CSPM solution by creating custom

rules for each environment.
Which statement is correct?

- A. Custom rules using Domain Specific Language are only available when using SSPM.
- B. You will need to evaluate SaaS Security Posture Management (SSPM) in addition to CSPM so that rules applied to GCP will align with Google Workspace
- C. With Netskope CSPM, you can create custom rules using Domain Specific Language for AWS, Azure, but not for GCP.
- **D. With Netskope CSPM, you can create custom rules using Domain Specific Language for AWS, Azure, and GCP**

정답: D

설명:

Netskope Cloud Security Posture Management (CSPM) allows for the creation of custom rules using Domain Specific Language (DSL) for all three major cloud platforms: AWS, Azure, and GCP. This capability is integral to CSPM and enables organizations to tailor their security posture assessments to their specific needs across different cloud environments.

The ability to create custom rules using DSL within Netskope CSPM for AWS, Azure, and GCP is documented in the Netskope Knowledge Portal. It provides detailed instructions on how to build custom rules under Policies > Security Posture > Profiles & Rules for security assessment of resources across these cloud platforms

질문 # 35

You successfully configured Advanced Analytics to identify policy violation trends. Upon further investigation, you notice that the activity is NULL. Why is this happening in this scenario?

- A. The SSPM policy was not configured during setup.
- **B. A user accessed a static Web page.**
- C. A policy violation was identified using API Protection.
- D. The REST API v1 token has expired.

정답: B

설명:

The reason for the activity being NULL in this scenario is likely because a user accessed a static Web page. In Netskope's Advanced Analytics, when the activity is reported as NULL, it often indicates that there was no dynamic interaction or transaction to record, which is typical when a static web page is accessed. Static web pages do not generate the kind of events or activities that are tracked by policies, hence they appear as NULL in the activity field.

질문 # 36

Review the exhibit.

You are attempting to block uploads of password-protected files. You have created the file profile shown in the exhibit. Where should you add this profile to use in a Real-time Protection policy?

- A. Add the profile to a Malware Detection profile that is used in a Real-time Protection policy.
- B. Add the profile directly to a Real-time Protection policy as a Constraint.
- **C. Add the profile to a DLP profile that is used in a Real-time Protection policy.**
- D. Add the profile to a Constraint profile that is used in a Real-time Protection policy.

정답: C

설명:

In Netskope Cloud Security, to block uploads of password-protected files, you should add the file profile to a DLP (Data Loss Prevention) profile that is used in a Real-time Protection policy. The DLP profiles in Netskope are designed to detect and protect sensitive data in real-time and at rest across the cloud environment. This approach ensures that any file matching the criteria set in the file profile, such as being password-protected, will trigger the DLP rules and prevent the upload action in real-time.

The information aligns with the best practices for setting up DLP profiles in Netskope as described in their documentation and resources

질문 # 37

Your customer is currently using Directory Importer with Active Directory (AD) to provision users to Netskope. They have recently

acquired three new companies (A, B, and C) and want to onboard users from the companies onto the Netskope platform. Information about the companies is shown below.

- Company A uses Active Directory.
- Company B uses Azure AD.
- Company C uses Okta Universal Directory.

Which statement is correct in this scenario?

- A. Company A users cannot be provisioned to Netskope because the customer is already using AD Importer to import users from another Active Directory environment.
- **B. Users from Companies A, B, and C can be provisioned to Netskope by deploying additional AD Importers and integrating more than one SCIM solution.**
- C. Users from Company B and Company C cannot be provisioned because the customer is already using AD Importer.
- D. Either Company B or Company C users cannot be provisioned because integration with only one SCIM solution is allowed.

정답: B

설명:

Users from Companies A, B, and C can indeed be provisioned to Netskope. Company A, which uses Active Directory, can continue to use the existing AD Importer. For Company B that uses Azure AD and Company C that uses Okta Universal Directory, integration with SCIM (System for Cross-domain Identity Management) solutions is possible. Netskope supports provisioning users from multiple directories, including Active Directory and cloud-based identity providers like Azure AD and Okta, by using additional AD Importers and integrating more than one SCIM solution¹².

The correct approach for provisioning users from different companies that use various directory services is supported by Netskope's capabilities to integrate with multiple identity providers and directory services, as outlined in their documentation and community resources¹².

Netskope supports multiple identity sources at the same time. In this scenario:

Company A (Active Directory): You can deploy additional Directory Importer (DI) instances to connect to separate AD forests or domains. Netskope supports multiple DI connectors.

Company B (Azure AD): Azure AD provisioning uses SCIM, which is fully supported alongside DI.

Company C (Okta Universal Directory): Okta also uses SCIM, and Netskope allows more than one SCIM integration simultaneously.

Therefore, the customer can onboard all three companies without conflict.

Why the other options are incorrect

A). Users from Company B and C cannot be provisioned because customer is already using AD Importer. # Incorrect - SCIM integrations can coexist with Directory Importer.

B). Either Company B or C cannot be provisioned because only one SCIM solution is allowed. # Incorrect - Netskope supports multiple SCIM connectors.

D). Company A users cannot be provisioned because the customer is already using AD Importer with another AD environment. # Incorrect - Multiple DI instances can be deployed for multiple AD environments.

질문 # 38

.....

Netskope업계에 종사하시는 분들은 NSK300인증시험을 통한 자격증 취득의 중요성을 알고 계실것입니다. Itcertkr에서 제공해드리는 인증시험대비 고품질 덤프자료는 제일 착한 가격으로 여러분께 다가갑니다. Itcertkr덤프는 NSK300인증시험에 대비하여 제작된것으로서 높은 적응율을 자랑하고 있습니다.덤프를 구입하시면 1년무료 업데이트서비스, 시험불합격시 덤프비용환불 등 퍼펙트한 서비스도 받을수 있습니다.
