## MuleSoft-Integration-Associate Exam Reviews - Online MuleSoft-Integration-Associate Tests

We guarantee that after purchasing our MuleSoft-Integration-Associate exam torrent, we will deliver the product to you as soon as possible within ten minutes. So you don't need to wait for a long time and worry about the delivery time or any delay. We will transfer our MuleSoft-Integration-Associate prep torrent to you online immediately, and this service is also the reason why our MuleSoft-Integration-Associate Test Braindumps can win people's heart and mind. And what is more, if you study with our MuleSoft-Integration-Associate training guide for only 20 to 30 hours, then you will be ready to take the MuleSoft-Integration-Associate exam with confidence to pass it.

## Salesforce Certified MuleSoft Integration Associate Exam Sample Questions (Q34-Q39):

### NEW QUESTION # 34

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

According to MuleSoft's IT delivery and operating model which step should the organization take to solve this problem?

- A. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- B. Switch from a design-first to a code-first approach for IT development
- **C. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- D. Hire more IT developers, architects, and project managers to increase IT delivery

**Answer: C**

Explanation:

MuleSoft's IT delivery and operating model suggests modernizing IT practices to better support business growth and innovation.

Here's a detailed explanation:

\* Decoupling Core IT Projects:

\* Definition: Decoupling involves separating the core IT systems and projects from the innovative and experimental projects conducted by various lines of business.

\* Benefits:

\* Agility: Enables lines of business to innovate rapidly without being held back by the constraints of core IT systems.

\* Focus: Allows core IT to focus on maintaining and enhancing critical systems while business units can experiment and deploy new solutions more quickly.

\* Implementation:

\* API-led Connectivity: By using an API-led connectivity approach, core IT can expose reusable APIs and services that business units can leverage for their innovation efforts.

\* Governance and Security: Ensuring that proper governance and security measures are in place to protect core systems while allowing flexibility for innovation.

\* Outcome:

\* Faster Delivery: Speeds up the delivery of new features and solutions, aligning with business needs and market demands.

\* Enhanced Collaboration: Facilitates better collaboration between IT and business units, driving overall organizational growth.

\* IT Operating Model: Transforming IT Delivery

### NEW QUESTION # 35

An integration team follows MuleSoft's recommended approach to full lifecycle API development. Which activity should this team perform during the API implementation phase?

- A. Use the API specification to build the MuleSoft application
- B. Use the API specification to monitor the MuleSoft application
- C. Validate the API specification
- D. Design the API specification

**Answer: A**

Explanation:

MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

\* API Design:

\* Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

\* API Implementation:

\* Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

\* APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

\* Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

\* Validation and Monitoring:

\* Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

\* Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

References

\* MuleSoft Documentation: Full Lifecycle API Management

\* APIKit: Building APIs with APIKit

### NEW QUESTION # 36

A system administrator needs to determine when permissions were last changed for an Anypoint Platform user.

Which Anypoint Platform component should the administrator use to obtain this information?

- **A. Audit Logging**
- B. Anypoint Monitoring
- C. Mule Stack Traces
- D. Anypoint Studio

**Answer: A**

Explanation:

Anypoint Platform provides various tools and components for managing and monitoring the platform and its activities. To determine when permissions were last changed for an Anypoint Platform user, Audit Logging is the appropriate component to use. Here's a detailed explanation:

\* Audit Logging:

\* Purpose: Audit logs capture detailed records of user activities and changes within the Anypoint Platform, including permission changes.

\* Access: Administrators can access audit logs through the Anypoint Platform's management console.

\* Information Captured:

\* User Actions: Logs include information about user logins, permission changes, API deployments, and other critical actions.

\* Timestamp: Each log entry is timestamped, providing the exact time and date when the permissions were changed.

\* Use Case:

\* Monitoring and Security: Audit logs are crucial for monitoring platform activities, ensuring compliance, and investigating security incidents.

References

\* MuleSoft Documentation: Anypoint Platform Audit Logging

#### NEW QUESTION # 37

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF).

In this HTTP/1.1-compliant web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 3xx
- B. 5xx
- C. 4xx
- **D. 2xx**

**Answer: D**

#### NEW QUESTION # 38

According to MuleSoft, what is a major distinguishing characteristic of an application network in relation to the integration of systems, data, and devices?

- A. It uses a well-organized monolithic approach with standards
- **B. It is built for change and self-service**
- C. It leverages well-accepted internet standards like HTTP and JSON
- D. It uses CI/CD automation for real-time project delivery

**Answer: B**

Explanation:

An application network, as envisioned by MuleSoft, is designed to be dynamic and self-service, enabling rapid adaptation to changing business needs. Here's a detailed explanation:

\* Built for Change:

\* Flexibility: An application network allows for the easy addition, modification, and removal of services without disrupting existing functionalities.

\* Modular Architecture: Promotes a modular approach where services and APIs can be independently developed, deployed, and managed.

\* Self-Service:

- \* Empowerment: Enables different teams (e.g., developers, business units) to access and use APIs and services without heavy reliance on central IT.
  - \* API-led Connectivity: Facilitates a self-service model where reusable APIs are available for various teams to integrate and build upon, accelerating innovation and reducing time-to-market.
  - \* Characteristics:
    - \* Decentralization: Unlike monolithic architectures, an application network supports decentralized development and deployment.
    - \* Reusability and Discoverability: Services and APIs are designed to be easily discoverable and reusable across different parts of the organization.
- References
- \* MuleSoft Documentation: Application Networks
  - \* API-led Connectivity: MuleSoft API-led Connectivity

## NEW QUESTION # 39

.....

In order to cater to different consumption needs for different customers, we have three versions for MuleSoft-Integration-Associate exam braindumps, hence you can choose the version according to your own needs. MuleSoft-Integration-Associate PDF version is printable, if you choose it you can take the paper one with you, and you can practice it anytime. MuleSoft-Integration-Associate soft test engine can stimulate the test environment, and you will be familiar with the test environment by using it. MuleSoft-Integration-Associate online test engine support all web browsers, and you can use this version in your phone.
