Are you tired of feeling overwhelmed and unsure about how to prepare for the HPE0-S59 exam? Are you ready to take control of your future and get the HPE0-S59 certification you need to accelerate your career? If so, it's time to visit PrepAwayETE and download real HPE0-S59 Exam Dumps. Our team of experts has designed a HPE Compute Solutions (HPE0-S59) exam study material that has already helped thousands of students just like you achieve their goals. We offer a comprehensive HPE0-S59 practice exam material that is according to the content of the HP HPE0-S59 test.

HP HPE0-S59 Certification Exam is a valuable credential for IT professionals who are looking to demonstrate their expertise in HPE compute solutions. HPE Compute Solutions certification can help individuals to advance their careers, increase their earning potential, and gain recognition for their skills and knowledge in this field.

HP HPE0-S59 (HPE Compute Solutions) Certification Exam is a professional certification exam that validates the skills and knowledge of IT professionals in designing, deploying, and managing HPE compute solutions. HPE Compute Solutions certification exam is designed for IT professionals who are responsible for managing HPE compute solutions in enterprise environments.

## Reliable Test HPE0-S59 Test | Reliable HPE0-S59 Exam Blueprint

The HP HPE0-S59 certification exam is one of the best credentials in the modern HP world. The HPE Compute Solutions (HPE0-S59) certification offers a unique opportunity for beginners or experienced professionals to demonstrate their expertise and knowledge with an industry-recognized certificate. With the HPE Compute Solutions (HPE0-S59) exam dumps, you can not only validate your skill set but also get solid proof of your proven expertise and knowledge.

### HPE Compute Solutions Sample Questions (Q77-Q82):

#### NEW QUESTION # 77

Your customer needs to move an application from an HPE Synergy 480 Gen10 Compute Module to an HPE Synergy 660 Gen 10 Compute Module. The 480 has a switch that has been manually zoned outside of HPE OneView.

What must the customer do before migrating the application?

- A. Create a new server profile template and apply to the new hardware
- B. Edit the server profile and change server hardware type
- **C. Copy the server profile and assign the clone to the new hardware**
- D. Migrate the application to a Logical JBOD and connect it to the new server

**Answer: C**

Explanation:

When migrating an application from an HPE Synergy 480 Gen10 Compute Module to an HPE Synergy 660 Gen10 Compute Module, the recommended approach is to copy the server profile and assign the clone to the new hardware. This ensures that all the necessary configuration settings, including network and storage configurations, are retained and applied to the new compute module. Since the switch zoning is manually configured outside of HPE OneView, copying the server profile helps in maintaining consistency in the network settings during the migration.

#### NEW QUESTION # 78

Your customer has a logical enclosure configured using a single HPE Synergy frame with the following configuration

- two HPE Virtual Connect SE 100Gb F32 Modules for Synergy
  - two HPE Synergy Virtual Connect SE 32Gb FC Modules - 12 HPE Synergy 480 Gen10 Plus compute nodes with appropriate mezzanine cards
- They plan to add a new HPE Synergy frame to an existing logical enclosure with the following configuration
- two HPE Synergy Virtual Connect SE 32Gb FC Modules
  - two HPE Synergy 20Gb interconnect Link Modules
  - Eight HPE Synergy 480 Gen 10 Plus compute nodes with appropriate mezzanine cards
- Which statement about the planned configuration change is true?

- A. The two HPE Synergy 20Gb interconnect Link Modules must be replaced with the 50Gb option
- B. A license for an extended logical enclosure must be added to HPE OneView through GUI
- **C. The HPE Synergy virtual Connect SE 32Gb FC Modules from both frames should be stacked**
- D. Four compute modules must be moved to the second frame to balance the configuration

**Answer: C**

Explanation:

When adding a new HPE Synergy frame to an existing logical enclosure, it is essential to stack the HPE Synergy Virtual Connect SE 32Gb FC Modules from both frames. Stacking these modules ensures consistent management and redundancy across the logical enclosure, providing seamless integration and optimal performance.

#### NEW QUESTION # 79

Which statement about HPE Superdome Flex 280 is true?

- A. It must be equipped with at least 768 GB of memory.
- B. It can support up to two nPars with an external RMC.
- **C. It supports 2 to 8 sockets in 2-socket increments.**
- D. It cannot be managed using HPE OneView.

**Answer: C**

Explanation:

The HPE Superdome Flex 280 is a modular, high-performance server designed for mission-critical workloads. It supports configurations ranging from 2 to 8 sockets, scaling in 2-socket increments. This flexibility allows organizations to tailor the system's processing power to their specific needs.

#### NEW QUESTION # 80

Your customer plans to deploy VMware ESXi 7.0 U2, and they are looking for a hardware platform that will allow them to use up to 24 TB of physical memory.

Which HPE compute system meets the customer's requirements?

- A. HPE ProLiant DL580 Gen 10
- **B. HPE Superdome Flex**
- C. HPE Synergy 480 Gen10 Plus
- D. HPE ProLiant DL380 Gen 10 Plus

Answer: B

#### NEW QUESTION # 81

After HPE Superdome Flex deployment and nPar setup, you need to verify health status of HPE Superdome Flex components. Put the steps on the left into the coned order on the right to perform this task.

Enter show health command.	1
Confirm health status.	2
Open SSH client.	3
Open session to RMC.	4

Answer:

Explanation:

Enter show health command.	1	Open SSH client.
Confirm health status.	2	Open session to RMC.
Open SSH client.	3	Enter show health command.
Open session to RMC.	4	Confirm health status.

  

1	Open SSH client.
2	Open session to RMC.
3	Enter show health command.
4	Confirm health status.

\* Open SSH client: Begin by opening an SSH client on your computer. This client will be used to establish a secure connection to the Rack Management Controller (RMC).

\* Open session to RMC: Use the SSH client to open a session to the RMC. The RMC is the central management component for the HPE Superdome Flex system.

\* Enter show health command: Once connected to the RMC, enter the show health command. This command will provide detailed information about the health status of various components within the Superdome Flex system.

\* Confirm health status: Review the output of the show health command to confirm the health status of the Superdome Flex components. This step ensures that all components are functioning correctly and identifies any potential issues.
