

Three High-in-Demand Lead2PassExam Adobe AD0-E724 Practice Questions Formats

Question: 4

Magento's command line interface is extended through custom commands defined in the ___ file within a module.

Response:

- A. command.xml
- B. di.xml
- C. config.xml
- D. cli.xml

Answer: D

Question: 5

Which elements should be considered when managing product types in Magento?
(Choose three)

Response:

- A. Product attributes
- B. Shipping methods
- C. Customer segments
- D. Stock availability
- E. Pricing rules

Answer: A,D,E

Question: 6

A merchant has a new product that they would like to upload a video to. What are the steps needed to accomplish this?

Response:

- A. Upload the video under "Images and Video" on the product page, which will upload it to the media folder
- B. Upload the video via SFTP to the media folder, then add the filename to the product under "Images and Video"
- C. Upload the video to YouTube, add the merchant's YouTube API key in the Admin, then add the URL to the product
- D. Upload the video directly to the Adobe Commerce media folder and select it from the file manager in the product page

If you want the AD0-E724 certification to change your life and make it better, what are you waiting for? You should act quickly and make use of spare time of study or work to obtain a AD0-E724 certification and master one more skill. With the help of our AD0-E724 Exam Materials, you will find all of these desires are not dreams anymore. With the high pass rate as 98% to 100%, our AD0-E724 learning questions can help you get your certification with ease.

Now, you should do need to get the exam question sets from year to year and reference materials that is related to Adobe AD0-E724 certification exam. Busying at work, you must not have enough time to prepare for your exam. So, it is very necessary for you to choose a high efficient reference material. What's more important, you should select a tool that suits you, which is a problem that is related to whether you can pass your exam successfully. Therefore, try Lead2PassExam Adobe AD0-E724 Practice Test dumps.

New AD0-E724 Exam Papers, Pdf AD0-E724 Torrent

Adobe AD0-E724 certification exam is very important for every IT person. With this certification you will not be eliminated, and you will be a raise. Some people say that to pass the Adobe AD0-E724 exam certification is tantamount to success. Yes, this is true. You get what you want is one of the manifestations of success. Lead2PassExam of Adobe AD0-E724 Exam Materials is the source of your success. With this training materials, you will speed up the pace of success, and you will be more confident.

Adobe Commerce Developer Professional Sample Questions (Q111-Q116):

NEW QUESTION # 111

Which file should a developer use to set the default value when creating configuration fields for admin?

- A. `etc/adminhtml/config.xml`
- B. `etc/adminhtml/system.xml`
- C. `etc/config.xml`

Answer: A

Explanation:

When creating configuration fields for the admin panel and setting their default values, a developer should use the `etc/config.xml` file within their module. This file is used to declare default values for the module's configuration options. When Magento is installed or the module is enabled, these values are automatically loaded into the database, under the `core_config_data` table, setting the initial configuration for the module.

This approach ensures that the module has sensible defaults and operates correctly upon installation.

NEW QUESTION # 112

When attempting operations that require lengthy processing, a merchant on Adobe Commerce Cloud receives a timeout error after 180 seconds.

How would the developer deal with this issue?

- A. 1. Modify admin timeout into `app/etc/config.php` file.
2. Commit and push that code from the local environment.
3. Submit a support ticket to apply the changes.
- B. 1. Modify admin timeout into `.magento.app.yaml` file.
2. Commit and push that code from the local environment.
3. Move code to Production environment.
- C. 1. In the Fastly Configuration section > Advanced Configuration.
2. Set the Admin path timeout value in seconds.
3. Save config and Upload VCL to Fastly.

Answer: C

Explanation:

The developer can deal with this issue by modifying the admin path timeout value in seconds in the Fastly Configuration section > Advanced Configuration in the Admin Panel. Fastly is a cloud-based caching service that improves site performance and security for Adobe Commerce Cloud projects. Fastly has a default timeout value of 180 seconds for admin requests, which means that any request that takes longer than 180 seconds will be terminated and result in a timeout error. The developer can increase this value to allow longer processing time for admin requests without causing errors. The developer also needs to save the configuration and upload VCL to Fastly to apply the changes. Verified References: [Magento 2.4 DevDocs]

NEW QUESTION # 113

An Adobe Commerce developer is working on a module to manage custom brand entities and wants to replicate the following SQL query using SearchCriteria:

```
$filter1->setField('enabled')  
->setValue(1)  
->setConditionType('eq');  
  
$searchCriteria->setFilter($filter1);  
$filter2->condition('featured =? OR logo_image ?', [1, 'IS NOT NULL'])  
$searchCriteria->setSelectFields($filter2);
```

- A.

```

$filter1->setField('featured')
->setValue(1)
->setConditionType('eq');

$filter2->setField('logo_image')
->setConditionType('notnull');

$filterGroup1->setFilters([$filter1, $filter2]);

$filter3->setField('enabled')
->setValue(1)
->setConditionType('eq');

$filterGroup2->setFilters([$filter3]);

$searchCriteria->setFilterGroups([$filterGroup1, $filterGroup2]);

```

• B.

```

$filter1->setField('featured')
->setValue(1)
->setConditionType('eq');

$filter2->setField('logo_image')
->setConditionType('notnull');

$filter3->setField('enabled')
->setValue(1)
->setConditionType('eq');

$searchCriteria->setFilter($filter3)
->setOrFilter([$filter1, $filter2]);

```

• C.

Answer: B

Explanation:

The correct answer is Option A. This approach uses two filter groups to correctly implement the logic from the SQL query using Magento's SearchCriteria API.

* Understanding the Logic: The given SQL query contains two main conditions:

* featured = 1 AND logo_image IS NOT NULL (grouped together with an AND condition)

* enabled = 1

In the Magento SearchCriteria terms, these translate to:

* Filter Group 1: featured = 1 AND logo_image IS NOT NULL

* Filter Group 2: enabled = 1

The two filter groups are then combined using an implicit AND condition.

* Magento's SearchCriteria Structure: The SearchCriteria object is the recommended way in Magento 2 to filter and retrieve collections with complex conditions.

* Filter Groups: Used to group filters together. All filters within a filter group are combined with an AND condition.

* Filters: Define a condition for a single field.

* Explanation of the Code for Option A:

* Filter 1 is created for the featured field, set to 1 with an eq condition type.

* Filter 2 is created for the logo_image field, with a notnull condition type.

* Both Filter 1 and Filter 2 are combined into Filter Group 1, which applies an AND condition between these filters.

* Filter 3 is created for the enabled field, set to 1 with an eq condition type.

* Filter Group 2 contains only Filter 3.

* Finally, both filter groups are set on the SearchCriteria object. By default, the SearchCriteria combines filter groups using an AND condition between them.

* Why Option A is Correct: Option A uses two filter groups that exactly match the desired SQL query logic:

* It correctly combines featured and logo_image in an AND condition.

* It then checks if enabled is 1, which is handled by the second filter group.

NEW QUESTION # 114

A new custom module is built for the existing Adobe Commerce store. A merchant has requested a few frontend updates. For this, a developer has to implement a custom style.

What is the location of the less file that will be included by default?

- A. `view/{area}/web/css/source/_module.less`
- **B. `view/{area}/web/css/source/main.less`**
- C. `view/{area}/web/css/style.less`

Answer: B

Explanation:

The `view/{area}/web/css/source/main.less` file is the default less file that is included by default. This file contains the main styles for the module.

In a custom module in Adobe Commerce, the default location for including custom LESS styles is typically `view/{area}/web/css/source/_module.less`. However, the most commonly used file for adding global styles is `view/{area}/web/css/source/_extend.less`. The `view/{area}/web/css/style.less` file is not standard, and the `main.less` file is used as an entry point for compilation but typically does not contain custom styles directly.

NEW QUESTION # 115

An Adobe Commerce developer is creating a module (`Vendor.ModuleName`) to be sold on the Marketplace.

The new module creates a database table using declarative schema and now the developer needs to make sure the table is removed when the module is disabled.

What must the developer do to accomplish this?

- **A. There is nothing further the developer needs to do. The table will be removed when the module is disabled and `bin/magento setup:upgrade` is run.**
- B. Add a schema patch that implements `Magento\Framework\Setup\Patch\PatchRevertableInterface` and drops the table in the revert function.
- C. There is nothing further the developer needs to do. The table will be removed when the `bin/magento module:uninstall vendor_ModuleName` is run.

Answer: A

Explanation:

When you disable a module, Magento removes all of its declarative schema changes from the database the next time you run `bin/magento setup:upgrade`. This means that when the developer disables the module and runs `setup:upgrade`, Adobe Commerce will automatically handle the removal of the database table created by the module's declarative schema.

For reference, here are some key points from the documentation:

* [Disable a Module](https://x.com/i/grok?text=Disable%20a%20Module)- This section explains how Magento handles the database schema when a module is disabled.

* Declarative Schema Configuration- Provides an overview of how declarative schema works, including its behavior when modules are disabled or uninstalled.

Therefore, based on the official Adobe Commerce documentation, the correct action for the developer is to do nothing further beyond disabling the module and running `bin/magento setup:upgrade`. Magento will take care of removing the table associated with the module as part of its schema management process.

NEW QUESTION # 116

.....

It is acknowledged that there are numerous AD0-E724 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many materials by yourself. But since you have clicked into this website for AD0-E724 practice materials you need not to worry about that at all because our company is especially here for you to solve this problem. We have a lot of regular customers for a long-term cooperation now since they have understood how useful and effective our AD0-E724 Actual Exam is. So will you!
