2026 Latest MTCNA – 100% Free Pass Guide | Examcollection MTCNA Vce

If you are determined to enter into MikroTik company or some companies who are the product agents of MikroTik, a good certification will help you obtain more jobs and high positions. RealExamFree release high passing-rate MTCNA exam simulations to help you obtain certification in a short time. If you obtain a certification you will get a higher job or satisfying benefits with our MTCNA Exam Simulations. Every day there is someone choosing our exam materials. If this is what you want, why are you still hesitating?

MikroTik MTCNA (MikroTik Certified Network Associate) Certification Exam is a globally recognized certification that validates the skills and knowledge of network professionals in deploying and managing MikroTik routers and networks. MikroTik Certified Network Associate Exam certification is designed for individuals who want to enhance their skills in configuring, maintaining, and troubleshooting network infrastructures using MikroTik routers and networking devices.

MikroTik's MTCNA Certification program is recognized globally and is highly regarded in the networking industry. MikroTik Certified Network Associate Exam certification program is designed to ensure that network professionals who earn the certification have a comprehensive understanding of MikroTik devices and can manage and troubleshoot networks effectively. Employers worldwide recognize the value of the MTCNA certification and often seek certified professionals to manage their networks.

MikroTik Certified Network Associate Exam Sample Questions (Q93-Q98):

NEW QUESTION # 93

What is the correct action to be specified in the NAT rule to hide a private network when communicating to the outside world?

- A. passthrough
- **B. masquerade**
- C. allow
- D. tarpit

Answer: B

Explanation:

In MikroTik RouterOS, the masquerade action is used in source NAT (srcnat) rules to hide internal/private IP addresses behind a router's public IP address. This is typically done for internet access from a LAN where the devices have private IP addresses (e.g., 192.168.x.x).

Masquerade dynamically changes the source IP of outgoing packets to the IP address of the router's outbound interface, allowing multiple internal devices to share a single public IP.

Let's evaluate the options:

- * A. masquerade ##Correct. Used to perform source NAT for hiding private addresses.
- * B. allow ##Not a valid NAT action.
- * C. passthrough ##Used in mangle rules to continue processing additional rules, not for NAT.
- * D. tarpit ##Used to delay TCP connections (often in firewall, not NAT).

MTCNA Course Manual - NAT Chapter:

"Masquerade is a special form of source NAT where the router replaces the source IP with the IP address of the outgoing interface." Rene Meneses Guide - NAT Configuration:

"Use masquerade on the router's WAN interface to give internet access to private clients." Terry Combs Notes - NAT Rule Actions:

"Masquerade = dynamic src-nat. Useful when public IP is dynamic or unknown."

NEW QUESTION # 94

You want to transfer existing '/ip firewall filter' configuration from one router to a new system.

Choose the best possible way to do:

- A. Create backup only of '/ip firewall filter' rules
- B. Export global configuration and remove everything apart from '/ip firewall filter'
- **C. Export only '/ip firewall filter'**
- D. Create backup, edit backup file and restore on target router

Answer: C

Explanation:

The best way to transfer only the firewall filter rules is to use the export command for just that section:

Command:

/ip firewall filter export

This produces a readable script containing only the firewall filter rules. This method is safer than editing binary backups and more efficient than exporting the global configuration and deleting unrelated parts.

Evaluation:

- * A.#Correct - clean and script-based approach
- * B.#You cannot selectively back up just firewall rules using the backup function (it's system-wide)
- * C.#Editing a backup file is not recommended and often not possible (it's binary)
- * D.#Too cumbersome and error-prone

MTCNA Course Manual - Configuration Transfer:

"Use export to get script output of specific sections. Backups are for full system restore." Rene Meneses Guide - Migrating Configurations:

"Export is recommended for transferring specific configurations like firewall rules." Terry Combs Notes - Export vs Backup:

"Backups = full system. Use export for clean, readable configuration transfer."

NEW QUESTION # 95

Which class of IP address provides a maximum of only 254 host addresses per network ID?

- A. Class B
- **B. Class C**
- C. Class D

- D. Class A

Answer: B

NEW QUESTION # 96

It is possible to add user-defined chains in ip firewall mangle.

- A. True
- B. False

Answer: A

Explanation:

RouterOS allows users to define custom chains in the mangle table, giving more flexibility for organizing and managing rules. This is particularly useful in complex routing and QoS configurations.

MikroTik Wiki - Firewall Mangle:

"Custom chains can be created using the add chain=your_chain_name command. Then you can jump to them from built-in chains."

MTCNA Course Material - Mangle & Packet Flow:

"User-defined chains help separate logic and simplify processing. You can jump into them from prerouting, forward, or postrouting."

Final answer: A

NEW QUESTION # 97

Action=redirect is applied in

- A. chain=srcnat
- B. chain=forward
- C. chain=dstnat

Answer: C

NEW QUESTION # 98
