## AD0-E117 Free Test Questions - AD0-E117 Latest Test Bootcamp

Learning at electronic devices does go against touching the actual study. Although our AD0-E117 exam dumps have been known as one of the world's leading providers of AD0-E117 exam materials. For your convenience, we especially provide several demos for future reference and we promise not to charge you of any fee for those downloading. Therefore, we welcome you to download to try our AD0-E117 Exam. Then you will know whether it is suitable for you to use our AD0-E117 test questions. We are sure to be at your service if you have any downloading problems.

By passing the Adobe AD0-E117 (Adobe Experience Manager Architect Master) Certification Exam, candidates can demonstrate their expertise in AEM architecture and gain recognition as an Adobe-certified professional. Adobe Experience Manager Architect Master certification can help individuals to advance their careers and increase their earning potential. Additionally, organizations can benefit from having certified professionals who can design and implement AEM solutions that meet their business needs.

## Adobe Experience Manager Architect Master Sample Questions (Q84-Q89):

#### NEW QUESTION # 84

A customer has an international presence and a strong brand image. The customer considers the exceptional quality images used for both print and on the website to be essential for its business. The customer uses AEM 6.5 managed services with a configuration of 2 dispatchers, 2 publishers, and 1 author.

The original images can weigh up to 500Mb with videos weighing even more. Renditions are generated after files are uploaded to AEM DAM by the Design team so the Authoring team can use them on the website.

The teams report issues with platform stability and slowness. Visitors report that images look pixelated on some screens and pages are very slow to load.

Which two actions should the Architect take to resolve these issues? (Choose two.)

- A. Train the design team to upload smaller assets and save the originals elsewhere
- B. Allocate more memory to ImageMagick and FFmpeg
- C. Optimize renditions for the different viewports used by the visitors
- D. Split AEM Assets and Sites in two different stacks and use Connected Assets
- E. Add more dispatchers and publishers to the AEM configuration

**Answer: C,D**

Explanation:

"optimizing renditions for different viewports can improve the image quality and page load speed for visitors. Splitting AEM Assets and Sites in two different stacks and using Connected Assets can reduce the load on the author server and improve platform stability".

#### NEW QUESTION # 85

A customer is about to go live with a new website on AEM on prem. The DNS (www.domain.com) already points to the load balancer of the AEM environment and final sanity checks are being performed. The website was tested in lower environments without SSL. On production, the website is served over https. During sanity testing, all requests result in a 404.

While investigating this issue, an Architect determines the following:

- \* The requests land on port 443 on the load balancer where SSL is terminated and an HTTP header X-Forwarded-Proto is set
  - \* The website Sling Mapping is created beneath /etc/map/http/www.domain.com.80
  - \* The URLs on the website are externalized with http in the absolute links
- Which two actions should the Architect take to resolve this problem? (Choose two.)

- A. Ensure the Sling Mapping exist at /etc/map/https/www.domain.com.443
- B. Ensure the Sling Mapping exist at /etc/map/httpj)mwp<.domain.com.443Configure the Adobe Granite SSL Connector Factory with the correct SSL port
- C. Configure Apache Felix Http Service SSL Filter to use the correct SSL forward header
- D. Ensure the Sling Mapping exist at /etc/map/https/www.domain.com.80

**Answer: B,C**

Explanation:

"the Sling Mapping should match the protocol and port of the incoming request, which in this case is https and 443. The Apache Felix Http Service SSL Filter should be configured to use the X-Forwarded-Proto header to detect if the request is secure or not".

#### NEW QUESTION # 86

After building an AEMaaS website, it was found that non-cached secured static content will put too much load on the servers. How can this secured static content be cached without creating a security concern?

- A. Cache the secured content on the dispatcher and return "Cache-Control: private" on the HTTP header
- B. Cache the secured content on the CDN using AuthChecker module
- C. Cache the secured content on the CDN and return "Cache-Control: private" on the HTTP header
- D. Cache the secured content on the dispatcher using AuthChecker module

**Answer: D**

#### NEW QUESTION # 87

A client designs a new experience for one of their brand sites with the following parameters:

- \* The new experience should behave like a desktop application
- \* There is a lot of dynamic content in the app
- \* SEO and initial page load are a top concern for the client
- \* The client's marketing team needs to be able to author the content with a WYSIWYG editor Which approach should the Architect use to meet these requirements?

- A. Create a set of API-driven components
- B. Use the traditional server side components on the website
- C. Use AEM as a headless CMS
- **D. Use the SPA Editor SDK with Server Side Rendering**

**Answer: D**

Explanation:

"the SPA Editor SDK with Server Side Rendering allows for creating dynamic web applications that behave like desktop applications while also supporting SEO and initial page load performance. It also enables marketing teams to author content with a WYSIWYG editor".
