

Authorized Juniper Reliable JN0-460 Test Materials With Interactive Test Engine & Well-Prepared Valid JN0-460 Test Cram

What's more, part of that Actual4test JN0-460 dumps now are free: <https://drive.google.com/open?id=1TQ0D1C8oNEfzygjelv6LNzfyQfs0yI2d>

Never stop challenging your limitations. If you want to dig out your potentials, just keep trying. Repeated attempts will sharpen your minds. Maybe our JN0-460 study materials are suitable for you. We strongly advise you to have a brave attempt. You will own a wonderful experience after you learning our JN0-460 Study Materials. Our study materials are different from common study materials, which can motivate you to concentrate on study.

Actual4test aims to assist its clients in making them capable of passing the Juniper JN0-460 certification exam with flying colors. It fulfills its mission by giving them an entirely free Mist AI Wired, Specialist (JNCIS-MistAI-Wired) (JN0-460) demo of the dumps. Thus, this demonstration will enable them to scrutinize the quality of the Juniper JN0-460 Study Material. Your opportunity to survey the Juniper JN0-460 exam questions before buying it will relax your nerves. The guarantee to give you the money back according to terms and conditions is one of the remarkable facilities of the Actual4test.

100% Pass JN0-460 Reliable Test Materials - Realistic Valid Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Test Cram

Who don't want to be more successful and lead a better life? But it's not easy to become better. Our JN0-460 exam questions can give you some help. After using our JN0-460 study materials, you can pass the exam faster and you can also prove your strength. Of course, our JN0-460 Practice Braindumps can bring you more than that. You can free download the demos to take a look at the advantages of our JN0-460 training guide.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q18-Q23):

NEW QUESTION # 18

When deploying EVPN, which method of forwarding BUM traffic is supported by Mist?

- A. ingress replication
- B. underlay replication
- C. core-only replication

- D. copy-on-write

Answer: A

NEW QUESTION # 19

You are asked to configure switch ports to VLANs depending on which type of device is connected to it. Which Mist feature will accomplish this task?

- A. dynamic port configuration
- B. bulk upload of switch configuration
- C. select switch configuration
- D. site variables

Answer: A

Explanation:

According to Juniper Mist documentation, Dynamic Port Configuration (DPC)-also referred to as Dynamic Port Profiles-is the feature specifically designed to automate the assignment of VLANs and port settings based on the type of device connected to a switch. This technology enables the concept of "colorless ports," where any device (such as a Juniper Mist Access Point, an IP camera, or a VoIP phone) can be plugged into any available switch port without prior manual configuration.

The system functions by using "port assignment rules" that leverage various device properties to identify the connected hardware. These properties include LLDP attributes (System Name, Chassis ID, or Description), MAC addresses (including specific OUI ranges), and RADIUS attributes. For example, a rule can be configured to detect an LLDP System Description starting with "Mist Systems" and automatically apply a

"Wireless AP" port profile. This profile typically includes the management VLAN, PoE settings, and Spanning Tree Protocol (STP) parameters required for an access point to function.

The primary benefit of DPC is the reduction of manual labor and the elimination of configuration errors in large-scale deployments. In traditional environments, an administrator would have to manually assign a VLAN to a specific physical port; with DPC, the Juniper Mist cloud detects the device and pushes the relevant configuration to the switch in real-time. If the device is disconnected, the port can be configured to revert to a "restricted" or "guest" VLAN, ensuring that the network remains secure against unauthorized access. This AI-driven approach drives consistency across multiple sites while significantly streamlining the onboarding of new hardware.

NEW QUESTION # 20

What is the device that handles the VXLAN encapsulation and decapsulation referred to as?

- A. a UNI
- B. an LSR
- C. a VTEP
- D. an LSP

Answer: C

NEW QUESTION # 21

Route distinguishers in EVPN are used to:

- A. Aggregate multiple routes into a single advertisement
- B. Ensure all routes are publicly accessible
- C. Identify routes within the same EVPN instance
- D. Differentiate between routes in overlapping IP spaces

Answer: D

NEW QUESTION # 22

What information does Mist use to determine if the port is classified as a link?(Choose two.)

- A. if the port is an STP root port

- B. if the port has a description configured
- C. if the port has an MTU greater than 1500 configured
- D. if TX and RX are higher than the rest of the ports

Answer: A,D

Explanation:

Juniper Mist automatically classifies ports to simplify visibility and automation within Wired Assurance. The Mist cloud analyzes port telemetry and link behavior to determine port roles, including uplinks.

"Mist uses machine learning and switch telemetry to automatically detect uplinks by analyzing traffic behavior and topology information. Uplink ports typically exhibit higher TX/RX utilization and are identified as spanning-tree root or forwarding ports connecting upstream devices." Option A: Correct - Mist examines traffic statistics. Ports with significantly higher TX/RX utilization relative to others are likely uplinks.

Option B: Incorrect - MTU size is not a classification criterion.

Option C: Correct - Mist uses STP information (root or designated port status) to identify uplinks.

Option D: Incorrect - port description fields are for administrative purposes only and are not used by Mist analytics.
