

# 300-710 Free Exam Questions, Latest 300-710 Test Guide

BONUS!!! Download part of VCEEngine 300-710 dumps for free: <https://drive.google.com/open?id=1kmewQHZoFzzKv2jigq-N2IFxNpYGqDp>

If you prepare for the 300-710 exam using our VCEEngine testing engine, it is easy and convenient to buy. Just two steps to complete your purchase, we will send the 300-710 product to your mailbox quickly. And you only need to download e-mail attachments to get your products.

Passing the Cisco 300-710 Exam can help professionals demonstrate their expertise in network security and improve their job prospects. Securing Networks with Cisco Firepower certification is recognized by many organizations as a valuable credential for security professionals, and it can open up new opportunities for career advancement and higher salaries.

Cisco 300-710 (Securing Networks with Cisco Firepower) certification exam is a well-recognized and highly sought-after certification in the IT industry. Securing Networks with Cisco Firepower certification exam is designed to validate the skills and knowledge required to implement and manage security features of Cisco Firepower Next-Generation Firewall (NGFW), including policy configuration, intrusion prevention system (IPS), and URL filtering. Securing Networks with Cisco Firepower certification is ideal for network security engineers, network administrators, and network architects who wish to enhance their skills in managing and securing Cisco Firepower NGFW.

## Latest Cisco 300-710 Test Guide | 300-710 Real Testing Environment

IT certification exam materials providers are increasing recently years so that you will feel confused while choosing Cisco 300-710 latest exam questions vce. Here is good news that VCEEngine dumps are updated and it is valid and latest. If you purchase dumps right now you can get the best discount and price. 300-710 Latest Exam Questions vce will be your best choice for your test. Wish you pass exam successfully with our products.

## Cisco Securing Networks with Cisco Firepower Sample Questions (Q371-Q376):

### NEW QUESTION # 371

A security engineer must configure policies for a recently deployed Cisco FTD. The security policy for the company dictates that when five or more connections from external sources are initiated within 2 minutes, there is cause for concern. Which type of policy must be configured in Cisco FMC to generate an alert when this condition is triggered?

- A. access control
- B. application detector
- C. intrusion
- D. correlation

**Answer: D**

Explanation:

Explanation

A correlation policy is a feature that allows you to respond in real time to threats or specific conditions on your network, using correlation rules. A correlation rule can trigger when the system generates a specific type of event, or when your network traffic

deviates from its normal profile1. When a correlation rule triggers, the system generates a correlation event and can also launch a response, such as sending an alert, blocking an IP address, or scanning a host1.

In this case, the security engineer can configure a correlation rule that triggers when the system detects five or more connections from external sources within 2 minutes. The engineer can also configure a response that sends an alert to the FMC or an email recipient when this condition is triggered. The engineer can then create a correlation policy that includes this rule and activate it on the FTD device1.

The other options are incorrect because:

An application detector is a feature that allows you to detect web applications, clients, and application protocols based on patterns in network traffic. An application detector does not generate alerts based on the number of connections from external sources2.

An access control policy is a feature that allows you to control traffic flow through your network and inspect traffic for intrusions, malware, and files. An access control policy does not generate alerts based on the number of connections from external sources3.

An intrusion policy is a feature that allows you to detect and prevent malicious network activity using Snort rules. An intrusion policy does not generate alerts based on the number of connections from external sources4.

#### NEW QUESTION # 372

An engineer is configuring a second Cisco FMC as a standby device but is unable to register with the active unit. What is causing this issue?

- A. The code versions running on the Cisco FMC devices are different.
- B. The licensing purchased does not include high availability.
- C. There is only 10 Mbps of bandwidth between the two devices.
- D. The primary FMC currently has devices connected to it.

**Answer: A**

Explanation:

Section: Deployment

#### NEW QUESTION # 373

admin@FirePOWER:~\$ ntpq -pn

remote	refid	st	when	poll	reach	delay	offset	jitter
*198.51.100.200	198.51.100.200	1	0	16	u	1024	0	0.000

Refer to the exhibit. A security engineer views the health alerts in Cisco Secure Firewall Management Center by using the Health Monitor in the web interface. One of the alerts shows an appliance as critical because the Time Synchronization module status is out of sync. To troubleshoot the issue, the engineer runs the ntpq command in Secure Firewall Management Center. The output is shown in the exhibit. Which action must the security engineer take next to resolve the issue?

- A. Reestablish the connection to the timeserver.
- B. Configure the appliance to sync with its own internal clock.
- C. Reset the appliance with a hard reboot.
- D. Configure the appliance to receive the time from an NTP server.

**Answer: D**

#### NEW QUESTION # 374

The network administrator wants to enhance the network security posture by enabling machine learning for malware detection due to a concern with suspicious Microsoft executable file types that were seen while creating monthly security reports for the CIO. Which feature must be enabled to accomplish this goal?

- A. static analysis
- B. dynamic analysis
- C. Ethos
- D. Spero

**Answer: D**

## NEW QUESTION # 375

What is a limitation to consider when running a dynamic routing protocol on a Cisco FTD device in IRB mode?

- A. Only distance vector routing protocols are supported.
- B. Only EtherChannel interfaces are supposed.
- C. Only nonbridge interfaces are supported.
- D. Only link-stale routing protocols are supported.

**Answer: C**

### Explanation:

Integrated routing and bridging (IRB) is a feature that allows you to route between different bridge groups on a Cisco FTD device. A bridge group is a logical interface that acts as a container for one or more physical or logical interfaces that belong to the same layer 2 broadcast domain. You can assign an IP address to a bridge group interface (BVI) and enable routing protocols on it, just like a regular routed interface. However, when you run a dynamic routing protocol on a Cisco FTD device in IRB mode, you can only use nonbridge interfaces as routing peers. You cannot use bridge group interfaces or bridge group member interfaces as routing peers<sup>2</sup>. This is because the routing protocol packets are sent and received on the nonbridge interfaces, and the bridge group interfaces are used only for forwarding data traffic<sup>3</sup>.

## NEW QUESTION # 376

So rest assured that with the Securing Networks with Cisco Firepower (300-710) practice questions you will not only make the entire 300-710 exam dumps preparation process and enable you to perform well in the final Securing Networks with Cisco Firepower (300-710) certification exam with good scores. To provide you with the updated Cisco 300-710 Exam Questions the Cisco offers three months updated Securing Networks with Cisco Firepower (300-710) exam dumps download facility, Now you can download our updated 300-710 practice questions up to three months from the date of Securing Networks with Cisco Firepower (300-710) exam purchase.
