

Quiz Valid Amazon - AWS-Solutions-Architect-Associate - Test AWS Certified Solutions Architect - Associate (SAA-C03) Lab Questions

AWS Certified Solutions Architect – Associate SAA-C03 Exam Questions and Answers

Exam Question 1

A company is migrating from an on-premises infrastructure to the AWS Cloud. One of the company's applications stores files on a Windows file server farm that uses Distributed File System Replication (DFS-R) to keep data in sync. A solutions architect needs to replace the file server farm.

Which service should the solutions architect use?

- A. Amazon EFS
- B. Amazon FSx
- C. Amazon S3
- D. AWS Storage Gateway

Correct Answer

B. Amazon FSx

Exam Question 2

A company has a legacy application that processes data in two parts. The second part of the process takes longer than the first, so the company has decided to rewrite the application as two microservices running on Amazon ECS that can scale independently.

How should a solutions architect integrate the microservices?

- A. Implement code in microservice 1 to send data to an Amazon S3 bucket. Use S3 event notifications to invoke microservice 2.
- B. Implement code in microservice 1 to publish data to an Amazon SNS topic. Implement code in microservice 2 to subscribe to this topic.
- C. Implement code in microservice 1 to send data to Amazon Kinesis Data Firehose. Implement code in microservice 2 to read from Kinesis Data Firehose.
- D. Implement code in microservice 1 to send data to an Amazon SQS queue. Implement code in microservice 2 to process messages from the queue.

Correct Answer

C. Implement code in microservice 1 to send data to Amazon Kinesis Data Firehose. Implement code in microservice 2 to read from Kinesis Data Firehose.

Exam Question 3

A company captures clickstream data from multiple websites and analyzes it using batch processing. The data is loaded nightly into Amazon Redshift and is consumed by business

Our Amazon AWS-Solutions-Architect-Associate practice exam also provides users with a feel for what the real Amazon AWS-Solutions-Architect-Associate exam will be like. Both AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) practice exams are the same as the Actual AWS-Solutions-Architect-Associate Test and give candidates the experience of taking the real AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) exam. These AWS-Solutions-Architect-Associate practice tests can be customized according to your needs.

The AWS-Solutions-Associate exam consists of multiple-choice questions and is designed to test the candidate's understanding of various AWS services, including compute, storage, databases, networking, security, and more. AWS-Solutions-Architect-Associate Exam also covers topics such as AWS architecture, deployment, and management, as well as best practices for designing and deploying applications on AWS.

Exam AWS-Solutions-Architect-Associate Vce, Exam AWS-Solutions-Architect-Associate Certification Cost

The actual AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) certification exam has quite high registration fees, so passing the AWS-Solutions-Architect-Associate exam in one attempt becomes mandatory. ActualVCE provides a free AWS-Solutions-Architect-Associate exam dumps demo so customers can see the product's features before purchasing. This offers comprehensive AWS-Solutions-Architect-Associate practice test questions that cover all the topics students need to cover to crack the Amazon AWS-Solutions-Architect-Associate test. Moreover, This also offers up to 1 year of free AWS-Solutions-Architect-Associate questions updates. By using our real AWS Certified Solutions Architect - Associate (SAA-C03) (AWS-Solutions-Architect-Associate) dumps, it is guaranteed that the candidate passes in one attempt, so our product saves time and money.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q213-Q218):

NEW QUESTION # 213

Does Route 53 support MX Records?

- A. No
- B. It supports CNAME records, but not MX records.
- **C. Yes.**
- D. Only Primary MX records. Secondary MX records are not supported.

Answer: C

NEW QUESTION # 214

A company is building a mobile app on AWS. The company wants to expand its reach to millions of users. The company needs to build a platform so that authorized users can watch the company's content on their mobile devices. What should a solutions architect recommend to meet these requirements?

- A. Publish content to a public Amazon S3 bucket. Use AWS Key Management Service (AWS KMS) keys to stream content.
- B. Set up IPsec VPN between the mobile app and the AWS environment to stream content.
- **C. Use Amazon CloudFront. Provide signed URLs to stream content.**
- D. Set up AWS Client VPN between the mobile app and the AWS environment to stream content.

Answer: C

NEW QUESTION # 215

A company runs a payment processing system in the AWS Cloud. Sometimes when a payment fails because of insufficient funds or technical issues, users attempt to resubmit the payment. Sometimes payment resubmissions invoke multiple payment messages for the same payment ID.

A solutions architect needs to ensure that the payment processing system receives payment messages that have the same payment ID sequentially, according to when the messages were generated. The processing system must process the messages in the order in which the messages are received. The solution must retain all payment messages for 10 days for analytics.

Which solutions will meet these requirements? (Select TWO.)

- **A. Write the payment messages to an Amazon Kinesis data stream that uses the payment ID as the partition key.**
- B. Write the payment messages to an Amazon DynamoDB table that uses the payment ID as the partition key.
- C. Write the payment messages to an Amazon ElastiCache for Memcached cluster that uses the payment ID as the key.
- D. Write the payment messages to an Amazon Simple Queue Service (Amazon SQS) queue. Set the message attribute to use the payment ID.
- **E. Write the payment messages to an Amazon Simple Queue Service (Amazon SQS) FIFO queue. Set the message group to use the payment ID.**

Answer: A,E

Explanation:

Both Amazon Kinesis and SQS FIFO queues ensure the sequential processing of messages. By using the payment ID as the partition key in Kinesis or as the message group in the SQS FIFO queue, messages are processed in order. Both solutions also allow for long-term retention (up to 10 days) of messages, making them suitable for this payment processing use case.

Option A (DynamoDB): DynamoDB does not guarantee message ordering for real-time processing.
 Option C (ElastiCache): ElastiCache is for caching, not suitable for sequential message processing.
 Option D (Standard SQS queue): A standard SQS queue does not guarantee ordering of messages.

 Amazon Kinesis
 Amazon SQS FIFO Queues

NEW QUESTION # 216

A solutions architect is developing a multiple-subnet VPC architecture. The solution will consist of six subnets in two Availability Zones. The subnets are defined as public, private and dedicated for databases. Only the Amazon EC2 instances running in the private subnets should be able to access a database. Which solution meets these requirements?

- A. Create a new route table that excludes the route to the public subnets' CIDR blocks. Associate the route table to the database subnets.
- **B. Create a security group that allows ingress from the security group used by instances in the private subnets. Attach the security group to an Amazon RDS DB instance.**
- C. Create a security group that denies ingress from the security group used by instances in the public subnets. Attach the security group to an Amazon RDS DB instance.
- D. Create a new peering connection between the public subnets and the private subnets. Create a different peering connection between the private subnets and the database subnets.

Answer: B

Explanation:

Security groups are stateful. All inbound traffic is blocked by default. If you create an inbound rule allowing traffic in, that traffic is automatically allowed back out again. You cannot block specific IP address using Security groups (instead use Network Access Control Lists).

"You can specify allow rules, but not deny rules." "When you first create a security group, it has no inbound rules. Therefore, no inbound traffic originating from another host to your instance is allowed until you add inbound rules to the security group." Source: https://docs.aws.amazon.com/vpc/latest/userguide/VPC_SecurityGroups.html#VPCSecurityGroups

NEW QUESTION # 217

Which DNS name can only be resolved within Amazon EC2?

- A. Private DNS name
- B. Global DNS name
- C. External DNS name
- **D. Internal DNS name**

Answer: D

NEW QUESTION # 218

.....

Facing the incoming Amazon AWS-Solutions-Architect-Associate Exam, you may feel stained and anxious, suspicious whether you could pass the exam smoothly and successfully. Actually, you must not impoverish your ambition. Our suggestions are never boggle at difficulties. It is your right time to make your mark.
