

100% Pass Quiz Useful SPLK-4001 - Splunk O11y Cloud Certified Metrics User Exam Sims

What's more, part of that ExamcollectionPass SPLK-4001 dumps now are free: <https://drive.google.com/open?id=1A12gZrPz582XR2rsPWYi99CFhntDsWYM>

If you ask me why other site sell cheaper than your ExamcollectionPass site, I just want to ask you whether you regard the quality of SPLK-4001 exam bootcamp PDF as the most important or not. Sometime I even don't want to explain too much. Sometime low-price site sell old version but we sell new updated version. If you want to get the old version of SPLK-4001 Exam Bootcamp PDF as practice materials, you purchase our new version we can send you old version free of charge, if this Splunk SPLK-4001 exam has old version.

The SPLK-4001 exam is designed to test the candidate's ability to use Splunk O11y Cloud metrics to identify issues, analyze data, and provide insights to stakeholders. SPLK-4001 exam also evaluates the candidate's ability to work with different data sources, including logs, events, and metrics. SPLK-4001 exam consists of 60 multiple-choice questions, and the candidate has 90 minutes to complete the exam. The passing score for the exam is 70%.

The SPLK-4001 exam is intended for professionals who have experience in using Splunk O11y Cloud metrics and want to validate their knowledge in this area. Splunk O11y Cloud Certified Metrics User certification exam covers various topics related to Splunk O11y Cloud metrics, including data ingestion, data transformation, data analysis, and visualization. SPLK-4001 Exam assesses the candidate's ability to work with Splunk O11y Cloud metrics to monitor and troubleshoot applications, infrastructure, and systems.

Clearer SPLK-4001 Explanation - Exam Dumps SPLK-4001 Provider

Revealing whether or not a man succeeded often reflect in the certificate he obtains, so it is in IT industry. Therefore there are many people wanting to take Splunk SPLK-4001 exam to prove their ability. However, want to pass Splunk SPLK-4001 Exam is not that simple. But as long as you get the right shortcut, it is easy to pass your exam. We have to commend ExamcollectionPass exam dumps that can avoid detours and save time to help you sail through the exam with no mistakes.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q14-Q19):

NEW QUESTION # 14

A customer operates a caching web proxy. They want to calculate the cache hit rate for their service. What is the best way to achieve this?

- A. Timeshift and BottomN
- B. Chart Options and metadata

- C. Percentages and ratios
- D. Timeshift and Top N

Answer: C

Explanation:

Explanation

According to the Splunk O11y Cloud Certified Metrics User Track document¹, percentages and ratios are useful for calculating the proportion of one metric to another, such as cache hits to cache misses, or successful requests to failed requests. You can use the `percentage()` or `ratio()` functions in SignalFlow to compute these values and display them in charts. For example, to calculate the cache hit rate for a service, you can use the following SignalFlow code:

```
percentage(counters("cache.hits"), counters("cache.misses"))
```

This will return the percentage of cache hits out of the total number of cache attempts. You can also use the `ratio()` function to get the same result, but as a decimal value instead of a percentage.

```
ratio(counters("cache.hits"), counters("cache.misses"))
```

NEW QUESTION # 15

Which of the following can be configured when subscribing to a built-in detector?

- A. Links to a chart.
- B. Alerts on a dashboard.
- C. Alerts on team landing page.
- D. Outbound notifications.

Answer: D

Explanation:

Explanation

According to the web search results¹, subscribing to a built-in detector is a way to receive alerts and notifications from Splunk Observability Cloud when certain criteria are met. A built-in detector is a detector that is automatically created and configured by Splunk Observability Cloud based on the data from your integrations, such as AWS, Kubernetes, or OpenTelemetry¹. To subscribe to a built-in detector, you need to do the following steps:

Find the built-in detector that you want to subscribe to. You can use the metric finder or the dashboard groups to locate the built-in detectors that are relevant to your data sources¹.

Hover over the built-in detector and click the Subscribe button. This will open a dialog box where you can configure your subscription settings¹.

Choose an outbound notification channel from the drop-down menu. This is where you can specify how you want to receive the alert notifications from the built-in detector. You can choose from various channels, such as email, Slack, PagerDuty, webhook, and so on². You can also create a new notification channel by clicking the + icon².

Enter the notification details for the selected channel. This may include your email address, Slack channel name, PagerDuty service key, webhook URL, and so on². You can also customize the notification message with variables and markdown formatting².

Click Save. This will subscribe you to the built-in detector and send you alert notifications through the chosen channel when the detector triggers or clears an alert.

Therefore, option C is correct.

NEW QUESTION # 16

An SRE came across an existing detector that is a good starting point for a detector they want to create. They clone the detector, update the metric, and add multiple new signals. As a result of the cloned detector, which of the following is true?

- A. You can only monitor one of the new signals.
- B. The new signals will be reflected in the original chart.
- C. The new signals will be reflected in the original detector.
- D. The new signals will not be added to the original detector.

Answer: D

Explanation:

Explanation

According to the Splunk O11y Cloud Certified Metrics User Track document¹, cloning a detector creates a copy of the detector

that you can modify without affecting the original detector. You can change the metric, filter, and signal settings of the cloned detector. However, the new signals that you add to the cloned detector will not be reflected in the original detector, nor in the original chart that the detector was based on. Therefore, option D is correct.

Option A is incorrect because the new signals will not be reflected in the original detector. Option B is incorrect because the new signals will not be reflected in the original chart. Option C is incorrect because you can monitor all of the new signals that you add to the cloned detector.

NEW QUESTION # 17

What are the best practices for creating detectors? (select all that apply)

- A. Have a consistent value.
- B. Have a consistent type of measurement.
- C. View data at highest resolution.
- D. View detector in a chart.

Answer: A,B,C,D

Explanation:

The best practices for creating detectors are:

View data at highest resolution. This helps to avoid missing important signals or patterns in the data that could indicate anomalies or issues1 Have a consistent value. This means that the metric or dimension used for detection should have a clear and stable meaning across different sources, contexts, and time periods. For example, avoid using metrics that are affected by changes in configuration, sampling, or aggregation2 View detector in a chart. This helps to visualize the data and the detector logic, as well as to identify any false positives or negatives. It also allows to adjust the detector parameters and thresholds based on the data distribution and behavior3 Have a consistent type of measurement. This means that the metric or dimension used for detection should have the same unit and scale across different sources, contexts, and time periods. For example, avoid mixing bytes and bits, or seconds and milliseconds.

NEW QUESTION # 18

One server in a customer's data center is regularly restarting due to power supply issues. What type of dashboard could be used to view charts and create detectors for this server?

- A. Machine dashboard
- B. Single-instance dashboard
- C. Multiple-service dashboard
- D. Server dashboard

Answer: B

Explanation:

Explanation

According to the Splunk O11y Cloud Certified Metrics User Track document1, a single-instance dashboard is a type of dashboard that displays charts and information for a single instance of a service or host. You can use a single-instance dashboard to monitor the performance and health of a specific server, such as the one that is restarting due to power supply issues. You can also create detectors for the metrics that are relevant to the server, such as CPU usage, memory usage, disk usage, and uptime. Therefore, option A is correct.

NEW QUESTION # 19

.....

We invited a large group of professional experts who dedicated in this SPLK-4001 training guide for more than ten years. To improve the accuracy of the SPLK-4001 guide preparations, they keep up with the trend closely. Every page is carefully arranged by them with high efficiency and high quality. Up to now, there are three versions of SPLK-4001 Exam Materials for your choice.

So high-quality contents and flexible choices of SPLK-4001 learning mode will bring about the excellent learning experience for you.
