## UiPath UiPath-ABAv1 Exam Syllabus Topics:

| Topic   | Details   |
|---------|---|
| Topic 1 | <ul style="list-style-type: none"><li>Version Control Integration: It focuses on utilizing Git integration in Studio to add a project, clone a repository is explained, including common Git operations.</li></ul>  |
| Topic 2 | <ul style="list-style-type: none"><li>UI Automation: UI Automation principles, including modern and classic design experiences, are discussed alongside utilizing modern recorder and input</li><li>output activities.</li></ul>  |
| Topic 3 | <ul style="list-style-type: none"><li>Platform Knowledge: It delves into UiPath products and their uses, including Studio types, Robot types, Orchestrator, and Integration Service. Additionally, it discusses the value of components within the UiPath Ecosystem.</li></ul>                              |
| Topic 4 | <ul style="list-style-type: none"><li>Variables and Arguments: This topic explores data types and how they're utilized, along with creating, managing, and using variables and arguments. It also addresses the differences between variables, arguments, global constants, and global variables.</li></ul> |
| Topic 5 | <ul style="list-style-type: none"><li>Email Automation: Handling emails via IMAP, POP3, SMTP, and integrating with Microsoft and Gmail are covered in this section. It also discusses the usage of Microsoft 365 and Gsuite packages.</li></ul>   |
| Topic 6 | <ul style="list-style-type: none"><li>Implementation Methodology: Understanding project implementation stages, interpreting PDDs and SDDs, and conducting peer reviews are discussed here.</li></ul>  |
| Topic 7 | <ul style="list-style-type: none"><li>Logging: This topic addresses interpreting robot execution logs and implementing logging best practices during development for effective debugging and analysis.</li></ul>  |
| Topic 8 | <ul style="list-style-type: none"><li>Libraries and Templates: Creating, publishing, and consuming process libraries, as well as working with templates, are discussed here.</li></ul>  |
|         |   |

|          |  |
|----------|--|
| Topic 9  | <ul style="list-style-type: none"> <li>• <b>Debugging:</b> Debugging modes, actions, breakpoints, and debugging panels are explained in this topic, along with using Profile Execution features to improve project execution performance.</li> </ul>   |
| Topic 10 | <ul style="list-style-type: none"> <li>• <b>Studio Interface:</b> Here, the topic covers installing Studio Community Edition, connecting to Orchestrator, and navigating the Studio interface. It also includes explanations of different Studio profiles, management of packages, use of activity project settings, and the use of options in the Studio Backstage view.</li> </ul> |
| Topic 11 | <ul style="list-style-type: none"> <li>• <b>Workflow Analyzer:</b> This topic covers the use of Workflow Analysis, along with configuring Workflow Analyzer settings.</li> </ul>   |
| Topic 12 | <ul style="list-style-type: none"> <li>• <b>Data Manipulation:</b> String manipulation, array operations, list initialization, dictionary usage, and DataTable operations are discussed in this topic.</li> </ul>  |
| Topic 13 | <ul style="list-style-type: none"> <li>• <b>Control Flow:</b> Control Flow activities, workflow types, and Flowchart layouts are discussed here, along with the usage of IF, Flow Decision, Switch activities, While, Do While, and For Each.</li> </ul>   |
| Topic 14 | <ul style="list-style-type: none"> <li>• <b>Working with Files and Folders:</b> Creating, managing, and iterating through local files and folders are covered here.</li> </ul>   |
| Topic 15 | <ul style="list-style-type: none"> <li>• <b>PDF Automation:</b> It discusses extracting data from native and scanned PDFs. Moreover, the topic focuses on different techniques for working with PDF documents.</li> </ul>  |
| Topic 16 | <ul style="list-style-type: none"> <li>• <b>Exception Handling:</b> This topic covers using Try Catch, Throw, Rethrow, and Retry Scope activities.</li> </ul>  |
| Topic 17 | <ul style="list-style-type: none"> <li>• <b>Excel Automation:</b> It explains Excel Automation principles and modern Excel integration including reading, writing, and manipulating Excel files. Additionally, the topic focuses on the usage of the Excel Workbook activities.</li> </ul>   |
| Topic 18 | <ul style="list-style-type: none"> <li>• <b>Business Knowledge:</b> This topic focuses on understanding business process automation (BPA) and its value proposition, as well as exploring key concepts related to business processes.</li> </ul>   |
| Topic 19 | <ul style="list-style-type: none"> <li>• <b>Orchestrator:</b> Understanding Orchestrator entities, tenant entities, provisioning robots, defining roles, and utilizing logging features are covered in this topic.</li> </ul>  |
| Topic 20 | <ul style="list-style-type: none"> <li>• <b>Object Repository:</b> Creation, publication, and consumption of UI libraries with static and dynamic descriptors are covered in this section.</li> </ul>  |

## **UiPath Certified Professional Automation Business Analyst Professional v1.0 Sample Questions (Q169-Q174):**

### **NEW QUESTION # 169**

What is a Test Case template?

- **A. Is a document that outlines the steps and expected results of a particular test**
- B. Is a document that outlines only the exceptions of the entire project
- C. Is a document that outlines only the exceptions of a particular test

- D. Is a document that outlines the steps and expected results of the entire project

**Answer: A**

Explanation:

A Test Case template is a standardized document that outlines the steps to be performed for a test, along with the expected results for each step. It serves as a detailed guide for testing a particular functionality or feature within a project, ensuring that all necessary scenarios are covered and results are accurately recorded. This document is essential for systematically validating the functionality of the automation and identifying any discrepancies from the expected behavior. References: UiPath Testing Framework

#### NEW QUESTION # 170

When prioritizing the processes to be automated based on the Automation Quadrant, what is a process with LOW complexity & HIGH benefit considered?

- A. Long-term improvement
- B. Low hanging fruit
- C. Must-do improvement
- D. Quick win

**Answer: D**

Explanation:

In the Automation Quadrant used for prioritizing processes for automation, a process that is characterized by LOW complexity and HIGH benefit is considered a 'Quick win'. This term is used to describe a process that can be automated easily and will deliver significant benefits quickly.

#### NEW QUESTION # 171

What does the Business Benefit of Flexibility refer to?

- A. If there is an unexpected spike in volume, robots enable you to scale up or down as required
- B. Robots run as configured with a 0% error rate
- C. Enabling businesses to act at a faster pace than before
- D. Automation leading to customer satisfaction (Example: contact center automation, resolving customer inquiries at a faster pace)

**Answer: A**

Explanation:

The Business Benefit of Flexibility refers to the ability of robots to enable scaling up or down as required when there is an unexpected spike in volume. This flexibility in robotic process automation (RPA) allows businesses to respond dynamically to varying workload demands without the need for proportional increases in human resources or infrastructure.

#### NEW QUESTION # 172

What is a process in the context of an automation implementation using UiPath?

- A. A high-level representation of the organization's business processes and their relationships
- B. An action that is performed by a software robot
- C. A group of related processes that share common goals and objectives
- D. An enumeration of steps that can be grouped into subprocesses and tasks

**Answer: D**

Explanation:

In the context of an automation implementation using UiPath, a process is defined as an enumeration of steps that can be grouped into subprocesses and tasks. This definition aligns with the concept of Robotic Process Automation (RPA), where a process is a sequence of tasks that are performed to achieve a specific outcome.

In UiPath, these tasks are automated using software robots that emulate human actions to carry out the defined steps<sup>1</sup>.

References: The explanation is based on the information provided by UiPath regarding RPA and the automation of business processes<sup>1</sup>.

### NEW QUESTION # 173

You are a Business Analyst tasked to analyze the feasibility of automating a process that takes as input a few hundred invoices per day. The invoices are received from a few dozen vendors. What is the best data extraction method for this process, keeping in mind the robustness of the process?

THANK YOU FOR YOUR BUSINESS!

- A. Rule-based extractor
- B. Form-based extractor
- C. RegEx-based extractor
- **D. Model-based extractor**

### Answer: D

Explanation:

\* Understanding the Scenario:

\* The process involves handling a few hundred invoices per day from several dozen vendors.

\* Each vendor likely uses different invoice templates, formats, and layouts, leading to high variability in input data.

\* The goal is to implement a robust and scalable data extraction method.

\* Why Model-Based Extractor is the Best Choice:

\* Model-based extractors leverage machine learning models trained on various document templates, making them ideal for diverse and semi-structured data like invoices.

\* The machine learning model can adapt to multiple formats and intelligently extract required data fields (e.g., invoice numbers, dates, line items, totals).

\* It ensures scalability as new vendor templates are introduced-additional training allows the model to learn new patterns effectively.

\* Comparison with Other Options:

\* Form-Based Extractor (Option A): Effective for extracting data from fixed, structured forms with minimal layout changes. It is not suitable for invoices with varying designs.

\* Rule-Based Extractor (Option C): Relies on static rules for data extraction. This approach fails to handle complex layouts or adapt to variations across dozens of vendor templates.

\* RegEx-Based Extractor (Option D): Uses regular expressions for specific patterns but is labor-intensive and error-prone for datasets with multiple formats and inconsistent structures.

\* Additional Benefits of Model-Based Extractor:

\* Can detect and extract data from images and scanned PDFs using OCR (Optical Character Recognition).

\* Reduces the time and effort required for manual intervention and template-specific configuration.

By utilizing a model-based extractor, you ensure that the solution is robust, scalable, and capable of handling the high volume and variability of invoices effectively.
